Railcare signs long-term transport agreement with Viscaria

Railcare has signed an eight-year agreement with Viscaria for rail transport services, with capacity available from April 2028. The agreement is worth approximately SEK 54 million annually, totalling SEK 429 million. Viscaria also has an option to extend the agreement by nine years, representing an additional SEK 482 million if exercised.

The agreement covers the transport of copper concentrate from the Viscaria mine in Kiruna to Narvik or Skelleftehamn, as well as input materials to Kiruna from Luleå or Skelleftehamn.

Railcare will be responsible for planning, train operations and delivery of the rail transport services, and will provide locomotives and train drivers. The contract also includes working with Viscaria to establish a long-term, efficient transport solution to meet the mine's logistics needs.

The agreement represents another long-term transport contract for Railcare in northern Sweden and strengthens the company's presence in the mining and raw materials transport sector. Railcare has extensive experience of rail transport operations serving the mining industry, with customers including Kaunis Iron and LKAB, where stringent requirements apply to capacity, planning and delivery reliability.

“We are very much looking forward to a long and successful partnership with Viscaria. This new contract strengthens our position as a leading transport provider to mining companies in northern Sweden,” says Mattias Remahl, President and CEO of Railcare Group.

“Railcare has extensive experience of rail transport services for the mining industry and will be an important partner in our logistics chain. The agreement secures long-term transport capacity and complements our rail connection in Kiruna and our planned shipping solution in Narvik,” says Jörgen Olsson, CEO of Viscaria.

About Viscaria
Gruvaktiebolaget Viscaria is working to reopen the Viscaria mine in Kiruna for modern, responsible copper production. The mine is strategically located, with a direct connection to the Iron Ore Line (Malmbanan) and access to established infrastructure. At full capacity, the Viscaria mine is expected to produce approximately 26,000 tonnes of copper annually. Viscaria's shares are listed on Nasdaq Stockholm Main Market (ticker: VISC).
