

Brani Asphalt selects Triona ECO for better operational asphalt planning

Brani Asphalt has chosen to partner with Triona by implementing Triona's product ECO – Energy and Cost Optimizer – to support their daily asphalt operations. This collaboration enhances Brani Asphalt's digital workflow by integrating ECO alongside their existing use of Triona's product C7 Projects.

By using ECO Brani Asphalt will get access to correct information and makes it possible to streamline their asphalt process, reduce energy and costs, while at the same time increasing the capacity at their asphalt plant.

ECO will help Brani in these areas:

- Easier planning for their asphalt jobs
- Automatic transport planning
- Connecting their asphalt plant and weight system
- Documenting and reporting

Per-Kristian Arentz-Nilsen, CEO Brani Asphalt:

We have selected ECO to streamline our daily operations both when it comes to asphalt paving and asphalt transport. Our goal is for ECO to save time and money throughout the entire process, from the asphalt plant to paving, while providing accurate documentation of process data and CO₂ emissions.

Emil Maana, product manager ECO:

We are very happy that Brani Asphalt has selected ECO. Brani Asphalt has become a strategic partner in the further development of ECO, contributing in-depth asphalt industry expertise. Their forward-looking approach aligns with our goals for innovation, efficiency, and data-driven process optimization in ECO.
