

Net Insight secures order of GPS/GNSS-independent time synchronization from Three Denmark for accelerated 5G expansion

Stockholm, Sweden – Net Insight has won a first order from Three Denmark (Three) for its GPS/GNSS-free time synchronization solution. This order is set to power Three Denmark's ambitious 5G rollout.

Building on the successful deployment in Sweden, Three Denmark has chosen Net Insight to bolster its 5G network's synchronization capabilities. The first order will be delivered in Q1, 2024.

The deployment of Net Insight's cutting-edge Zyntai nodes marks the introduction of this advanced synchronization product into Three Denmark's network. The companies are working closely to plan for the deployment, reducing cost of synchronization and ensuring independence from GPS/GNSS for synchronization. This order signifies a significant step forward in Three Denmark's 5G journey, enabling the seamless expansion of their network.

"We are convinced that Net Insight's synchronization solution meets our stringent requirements for a GPS-independent network," says Kim Christensen, CTO at Three Denmark. "It has proven to be the most adaptable, dependable, and cost-effective solution, aligning perfectly with Three's high standards for 5G."

"We are delighted that another strong and progressive operator such as Three Denmark has chosen our solution. The high number of GNSS jamming incidents in the last months has increased the interest in our GPS/GNSS independent synchronization solution," says Crister Fritzson, CEO of Net Insight. "Beyond its GPS independence, our Zyntai solution reduces overall costs and accelerates 5G rollouts. The increased security and availability of the solution is key in meeting the requirements of new advanced 5G services, aligning seamlessly with the vision of a forward-thinking mobile operator like Three."

About Net Insight

Net Insight (Nasdaq: NETI B) offers a GNSS/GPS independent time synchronization solution for TDD 5G networks through its Precision TimeNet product that provides the highest accuracy and performance while dramatically reducing CAPEX and OPEX for MSOs and speeding up 5G roll-outs by working over existing IP/MPLS networks.

With over 25 years of experience from the professional media industry where the world's leading media providers have relied on Net insight's Emmy®-winning Nimbra solution to guarantee their media transport and to accurately synchronize TV and media services over existing IP networks independently of GNSS/GPS. Net Insight now brings this uniquely established knowledge into the future mobile networks to solve 5G TDD time synchronization independent of GNSS/GPS. Solving time synchronization in 5G and 6G TDD networks through approaching it as an open disaggregated virtualized end-to-end service provided independent of the underlying network is for Net Insight the only future proof approach.
