

Freemelt receives additional machine order from Jiuli

Freemelt has received a new order for the industrial machine eMELT, from its partner Jiuli with expected delivery in the third quarter of 2026.

The order represents a further step in the established collaboration between the companies and demonstrates continued commercial traction for Freemelt's E-PBF technology, with a focus on energy and MedTech applications in the local market. The order value is in line with previously communicated pricing levels for eMELT orders under the collaboration with Jiuli.

Freemelt entered into a strategic collaboration agreement with Jiuli in 2025, providing Freemelt with access to local presence, technical expertise and established business relationships.

"The order confirms the value of our technology and enables us to further position ourselves in one of the world's most expansive and highly competitive markets for metal-based AM," says Daniel Gidlund, CEO of Freemelt.

About Us

Freemelt develops advanced 3D printers for metal components and aims to become the leading supplier in additive manufacturing (AM) using E-PBF technology, targeting SEK 1 billion in revenue by 2030. The solutions primarily support companies in the defense, energy, and medical technology sectors in Europe, U.S. and Asia, enabling them to drive innovation and improve production efficiency. Founded in 2017, Freemelt has expanded its product portfolio to include three printer models, with two designed for industrial production and one (Freemelt ONE) targeting research institutes and universities. The modular industrial printers (eMELT) leverage E-PBF technology, delivering significantly higher efficiency compared to other machines on the market while maintaining flexibility in metal selection.

Freemelt generates revenue primarily through the sale of advanced 3D printers at fixed prices, complemented by support and maintenance services, which are expected to account for 25% of total revenue by 2030.

The company is now focused on further industrializing its product and service portfolio and driving commercialization in the European, North American, and Asian markets. Read more at www.freemelt.com
