

Svenska Aerogel Holding AB (publ): Outlast explores potential Aersulate® applications in sportswear and defense products

Outlast® Technologies (“Outlast”) is a German technology company specializing in temperature management solutions for textiles and fibers. Outlast has developed Aersulate®, a thin and lightweight insulation solution incorporating Svenska Aerogel’s aerogel material, Naerogel®. Following an initial ramp-up order placed by Outlast with Svenska Aerogel in late 2025, Outlast is currently in discussions with companies about potential applications in sportswear and military products.

Initial tests have yielded encouraging results, highlighting the potential of Aersulate® for these applications and providing a promising basis for further discussions with prospective customers.

“Sportswear and military products are areas where thin, lightweight insulation could offer valuable benefits. We are exploring potential applications with companies in these sectors, and the positive initial test results encourage us to pursue these opportunities further,” says Martin Bentz, CEO of Outlast® Technologies.
