Medclair AB (publ)

Medclair receives follow-on order of SEK 5.4 million

An established UK-based customer within the recycling segment has chosen to expand its existing solution for nitrous oxide handling and has placed a follow-on order valued at approximately SEK 5.4 million, with expected delivery in Q2 2026.

The collaboration between the parties continues to deepen as the need to manage nitrous oxide emissions within the recycling sector grows. Through this investment, the customer is able to scale its operations, while Medclair's technology continues to play a central role in the transition towards more sustainable processes.

As in the healthcare sector, we are seeing that customers in other segments often return with additional orders.

– It is encouraging to see how our partnership with the customer has developed over a short period of time. Since the initial order in 2025 of SEK 4.4 million, we have delivered several smaller add-ons, and with this follow-on order of SEK 5.4 million, the customer is more than doubling its capacity. This is a pattern we recognize well from the healthcare sector: once our solutions are in place and delivering value, the business tends to grow organically. For us, this confirms that our key priority is to continue winning new customers, as we know that each new installation carries significant long-term growth potential, says CEO Jonas Lundh.
