

ZignSec has been certified to ISO27001:2013

ZignSec has received the official certification for ISO 27001:2013, which specifies the requirements for implementing and maintaining the information security management system within the organization regarding customer data.

ISO27001:2013 is the global standard to certify that an organization manages its risks regarding information security correctly, for both internal data and customer data. ZignSec's certification proves to clients and other stakeholders that the company is managing the security of all information accordingly.

Comment from Timm Schneider, CEO of ZignSec:

"The ISO certification is a quality guarantee towards our existing and potential customers and proves the high standard of our processes regarding the handling of personal data and identities. This certification is often a requirement from large clients which opens new opportunities and reduces the time until a customer can actively consume ZignSec services.

About ZignSec

ZignSec is a technology group in the fast-growing RegTech industry. The company provides SaaS platform with digital real-time solutions for customer due diligence and ID verification with global reach. The solutions are used by companies that in turn can optimize their processes for "onboarding" both corporate customers and consumers and at the same time ensure compliance with ever-changing local and global regulatory requirements for Know Your Customer (KYC) and Anti Money Laundering (AML).
