

Creturner Group reaches deal with hardware manufacturer

Creturner's digital arm has reached a settlement with a hardware manufacturer to replace its hardware with the latest generation

Creturner's HPC (High Performance Computing) has been affected this spring by the fact that the modern hardware has been affected by hardware problems. In short, the performance has been affected in a detrimental way when various workloads are to be completed and started up again. After an extensive dialogue, an agreement has been reached whereby the company will replace its machinery with the latest generation. This ultimately means a significant performance improvement and extended service life. The dialogue has been intensive and closely involved the British partners who will now jointly ensure that function is obtained. The upgrade will be implemented during the summer.

About Creturner Group

Creturner Group AB is a group with two business areas in environmental technology.

The digital part is a technical computing business that is expanding to strengthen the long-term potential and create a presence in the rapidly growing market for computing capacity. The company has its own facilities in Sweden with its own energy production to reduce raw material costs and environmental impact.

The environmental technology arm offers corporate customers an effective and permanent method of carbon offsetting their operations. The method is based on CDR (Carbon Dioxide Removal), which involves converting residual biomass into the element carbon and depositing it to reduce the amount of CO₂ in the atmosphere. Corporate customers of Creturner can then purchase carbon offsets in the same way that carbon offsets are traditionally purchased, for example by planting trees. Unlike tree planting, Creturner's approach is immediate, permanent and clearly measurable
