

Diadrom applies to the EUDIS Business Accelerator 2026

Diadrom is applying to the EUDIS Business Accelerator 2026 as a strategic step to establish and scale the company's role within the European defence and security industry. The objective is to validate our technology in an operational defence context, deepen collaboration with defence authorities and industrial primes, and align our offering with the priorities of the European Defence Fund (EDF).

In an increasingly software-defined defence environment, control of software configuration, traceability, and secure updates is critical for operational availability, interoperability, and cybersecurity.

"Without control of the software state, you effectively do not have control of the system – regardless of how advanced the platform is." – Viktor Eliasson, CEO, Diadrom

Diadrom addresses this by providing a digital control and trust layer for safety- and mission-critical platforms, enabling verified, synchronized, and certifiable software baselines throughout the entire lifecycle.

For us, EUDIS is not a marketing programme but a strategic instrument.

Through EUDIS, Diadrom aims to:

- Validate the solution against operational defence requirements
- Establish pilot projects and partnerships with European end-users and prime contractors
- Position the company as an enabler of sovereign, resilient, and lifecycle-controlled software for European defence systems.
