
Elementik launches latest generation of ByteSeal powered by FPC AllKey

Gothenburg, Sweden & Pune, India – June 9, 2026 – Fingerprint Cards AB (FPC) today announced that Elementik has launched a new generation of its ByteSeal security platform featuring FPC AllKey, the company's latest fingerprint authentication system. The launch marks Elementik's transition from FPC BM-Lite, which powered earlier ByteSeal products, to the more advanced AllKey platform, delivering enhanced security, usability and integration capabilities for customers seeking secure, passwordless authentication.

ByteSeal is designed to provide strong identity verification and secure access across digital environments, helping organizations protect sensitive information and critical systems. By integrating FPC AllKey, Elementik gains access to FPC's latest biometric authentication technology, combining high-performance fingerprint sensing with advanced software capabilities to deliver a seamless and secure user experience.

The migration from BM-Lite to AllKey reflects the growing demand for stronger, more scalable authentication solutions as organizations increasingly move away from passwords and legacy credentials. The new ByteSeal platform enables users to authenticate quickly and securely using their fingerprint, helping reduce security risks while improving convenience.

The launch also represents an important milestone in the relationship between FPC and Elementik. Building on the success of previous ByteSeal products, the companies are expanding their collaboration with additional products already under development that will incorporate FPC biometric technology.

As cyber threats continue to increase and organizations seek more effective ways to secure access to systems and data, biometric authentication is becoming a critical component of modern security architectures. Through its partnership with Elementik, FPC continues to expand the reach of fingerprint-based authentication into new markets and use cases, supporting the industry's transition toward secure, passwordless experiences.

Adam Philpott, CEO of FPC, comments:

"This launch demonstrates how customers are increasingly standardizing on FPC's latest biometric platforms as their products evolve and scale. Elementik's transition from BM-Lite to AllKey validates the strength of our technology roadmap and highlights the long-term value we create through customer partnerships. Just as importantly, this launch is part of a broader collaboration that continues to deepen, creating new opportunities for biometric authentication across a growing range of applications."

Nikhilesh Wani, Founder & Director of Elementik, added:

"At Elementik, our goal has always been to make true digital self-custody effortless – to put a person's entire digital identity behind their own fingerprint, and no one else's. FPC AllKey gives us a faster, more reliable biometric experience in the credit-card form factor ByteSeal demands, along

with the headroom to scale as we take the hardware credential vault category mainstream. Migrating from BM-Lite to AllKey was a natural next step in a partnership that has underpinned ByteSeal from the very beginning, and we're excited about the products we're building together next."

About Elementik

Elementik Technologies Private Limited is a deep-tech company based in Pimpri-Chinchwad, Pune, India, building secure, self-custodial identity hardware. Its flagship product, ByteSeal, is a credit-card-sized biometric hardware credential vault that lets people seal their passwords, passkeys, payment tokens, and digital keys behind their own fingerprint – unlocked in a single touch and controlled by no one else. Designed and manufactured in India, ByteSeal is creating the hardware credential vault category, making effortless digital self-custody accessible to everyone rather than the technical few.
