BINERO GROUP AB enters into a cooperation agreement with STAKATER AB

BINERO GROUP AB (publ) ("Binero"), a Swedish provider of cloud services and digital infrastructure, has entered into a cooperation agreement with Kubernetes specialists STAKATER AB ("Stakater"). The collaboration covers a joint sales and technology initiative to address the containerization and serverless needs of the Nordic Cloud Market.

Organizations are increasingly adopting containers and Kubernetes to automate their application operations, and make their business applications portable, secure, scalable and easy to manage. As with any emerging technology, there is a need for specialized solutions and managed services to make it easy for customers to adapt and implement.

In joining forces with Stakater, a certified premium RedHat partner and provider of a fully managed Kubernetes based DevSecOps platform Stakater Agility Platform, Binero is now able to provide a complete cloud solution to customers with qualified Kubernetes needs. With a managed Kubernetes solution, customers can focus on building their business applications, while the provider ensures a high-quality underlying technology. Moreover, Stakater customers will be able to use a Swedish cloud, in accordance with European data privacy laws.

"We want to provide our customers with some peace of mind, while still allowing them to make full use of the latest technology. With Stakater's managed Kubernetes platform running on our Swedish public cloud, organizations can focus on staying competitive and outpacing the rising customer expectations, without having to worry about managing the underlying infrastructure", says **Charlotte Darth, CEO of Binero Group.**

Through this collaboration, the companies will strengthen and build on each other's go-to-market and technology strategies, providing a complete solution for the Nordic Cloud Market.

"Our partnership with Binero reflects our growth agenda in action, allowing Stakater to offer its flagship product Stakater Agility Platform on a Swedish public cloud. Building on the success of our service on hyperscalers, this alliance allows Stakater to accelerate its mission to provide professional tools and services to help customers create and manage their Kubernetes based infrastructure effortlessly in Nordics market.", says **Rasheed Amir, founder and CEO of Stakater.**

PRESS RELEASE

03 MARCH 2021 09:00:00 CET

Binero.Cloud is a Swedish cloud infrastructure solution that is built on the principles of opensource code, data integrity and sustainability. Customers are offered an easy-to-use, standardized opensource way to consume infrastructure resources, in a modern and transparent pay-per-use model. New functionality and services are continuously added to the cloud portfolio, based on customer requirements and technology trends.

Stakater has been paving the way in the Nordics when it comes to competence in the Kubernetes area. Stakater builds and manages Kubernetes clusters for mainly enterprise customers, allowing them to focus on their businesses. Their fully managed service Stakater Agility Platform, is an easy-to-use Kubernetes solution in a comprehensible 'as a service' model.

About Binero and Stakater

Binero delivers solid and scalable cloud infrastructure to businesses and organizations with sustainability and data integrity in focus. Our public cloud **Binero.Cloud** is based on open source and globally established standards, while ensuring compliance with European laws and regulations. Through close collaboration and cloud native support we allow our customers to develop and innovate at high speed.

Binero is listed on NASDAQ First North Growth Market. Certified Adviser is Mangold Fondkommission AB.

Stakater is the Nordics leading Kubernetes enablement firm that designs, builds, implements & manages sophisticated Kubernetes infrastructures. Stakater help companies realize the full potential of the Kubernetes ecosystem across the organization from Developers, to Ops, to Management. Stakater has deep competence in all areas from infrastructure to tools and applications. This makes it possible to have a holistic perspective when businesses are to implement Kubernetes for its DevSecOps, containers, serverless and cloud-based strategies.
