

## QleanAir delivered 7,37 billion m<sup>3</sup> of cleaned air in the end of the fourth quarter 2024

**QleanAir increased the delivery of cleaned indoor air to 7,37 (7,21) billion cubic meters per month at the end of the fourth quarter. This means an increase of 2% compared to the end of the fourth quarter of 2023.**

At the end of December, QleanAir delivered 7,37 (7,21) billion cubic meters cleaned indoor air per month. This corresponds to an increase of 2% compared with the fourth quarter of the previous year. QleanAir reports the volume of cleaned indoor air through its air cleaners, cleanrooms, and cabin solutions quarterly on a global basis.

Air pollution is now considered the world's largest environmental threat to health and accounts for around 7 million premature deaths around the world each year according to the WHO. Pollutants accumulate indoors where the air can be up to 50 times more polluted than outdoor air. This is problematic because we spend about 90% of our time indoors.

Air quality has a significant impact on human health, well-being, and cognitive ability, both in the short and long term. In many organizations, air quality is also critical for the products' quality, lifespan and technical cleanliness. Clean air also contributes to mechanical equipment working better, lasting longer, and requiring less maintenance. QleanAir provides air cleaning solutions for most types of professional and public spaces.
