

## Two of Hexicon AB's (publ) offshore wind power projects in Sweden are rejected

**Today, the Swedish Government announced that 13 submitted applications to build offshore wind farms in the Baltic Sea, south of the Sea of Åland, are rejected. This means that Hexicon's joint venture company, Freja Offshore, terminates the work with the Cirrus and Dying projects.**

Hexicon has been operating Freja Offshore together with Mainstream Renewable Power, a company within the Aker Group, since 2021, with the aim of developing offshore wind farms off the coast of Sweden.

Freja is also developing the Mareld wind farm, which is planned off the west coast of Sweden. In June this year, the project received a recommendation from the County Administrative Board of Västra Götaland County and is currently being processed by the Swedish Government.

### About Hexicon

---

Hexicon is an early project developer in floating wind, opening new markets in deep water areas, and a technology provider with a patented floating wind design – TwinWind™. The dual business model supports the world's transition to sustainable energy. Floating wind is an important part of the future energy mix. It can be deployed quickly and at scale, contributing to the electrification of society at large. Hexicon operates in several markets across Europe, Africa and Asia. Hexicon is listed on Nasdaq First North Premier Growth Market (ticker HEXI). Certified Adviser is FNCA Sweden AB.
