Soltech in 28 MWh battery park project for CA Batteribalans in Lerum

Soltech Energy Solutions has now signed a new battery agreement. The company will assist the battery company CA Batteribalans with the design, installation and commissioning of a large-scale battery park of 28 MWh. The battery storage facility will be built in Lerum and the installation is expected to be commissioned in April 2025.

Soltech Energy Solutions is one of the Soltech Group's companies within tech solutions such as advanced energy systems, energy storage and large-scale solar energy solutions. In recent years, the company has established itself as a market leader in large-scale battery parks.

They have now been commissioned to build another large battery park for CA Batteribalans, a subsidiary in the CA Group.

The battery park will operate in the ancillary services market, which is a rapidly growing part of the energy sector, driven by the need to manage the transition to renewable energy and maintain the stability of the electricity grid. Something that is needed as weather-dependent and volatile power sources such as solar and wind increase. These types of power can also be a challenge for grid owners as they do not offer support services that the planned production facilities normally offer. Energy storage in the form of large-scale batteries is therefore becoming an increasingly important complement to the electricity system.

– It feels great to help CA Batteribalans with a large-scale tech solution in the form of a battery storage of 28 MWh that, in addition to balancing the electricity grid, will also be active in various markets such as the day ahead and intra day markets. The battery park will also be further proof of our position as a market leader in large-scale energy storage in Sweden, **says Rickard Lantz, Business Development Manager at Soltech Energy Solutions.**

Together with its customers, Soltech Energy Solutions has now built battery parks with a combined capacity of over 150 MWh.
