

Maven Wireless has been granted two more patents in India

Maven Wireless, a market leader in groundbreaking wireless coverage solutions, has been granted two more patents in India around ORAN and digital DAS.

Maven Wireless offers a market-leading digital DAS system for indoor and tunnel coverage worldwide. The solutions are unique, future-proof and support all relevant technologies from 2G to 5G as well as blue light services. The company has an active strategy for intellectual property rights, including patents, to protect its proprietary technology.

Including the 2 newly granted patents, Maven Wireless has 72 patents worldwide and has 7 more patent applications pending. The new patents in India cover key elements of how DAS (Distributed Antenna System) equipment sends digital data over high-speed fiber as well as how to build ORAN-based multi-operator DAS. Both patents support and protect Maven Wireless' operations in India specifically and in a general global perspective.
