## AdaptiveMobile Security, an Enea Company Wins Security Category at 2021 Fierce Telecom Awards

AdaptiveMobile Security, an Enea company and the world leader in mobile network security, today announced that it has been named as winner of the Security Category of the 2021 Fierce Telecoms Awards. The company was recognised for its [Unified 5G Network Security Solution](#), which allows carriers to protect against internal and external security threats to their 5G infrastructure. It is the first unified 5G network security solution, bringing together a combination of cybersecurity capabilities that operate in unison to secure 5G networks, slices, vertical APIs, and subscribers.

The Fierce Telecom Awards are among the world's foremost telecoms awards programs, recognizing innovation and excellence from the companies involved in advancing and transforming today's telecoms industry. The winners were announced in an online ceremony on 15th December 2021. To find out more about the Fierce Telecoms Awards and to view a list of the 2021 winners in the Fierce Innovation Report, visit the [awards website](#).

“Attackers already have access to the tools and techniques that are known to be effective, exploiting the IT protocols on which 5G architectures are built. In order to secure 5G networks, the telecoms industry needs to fully embrace a holistic and collaborative approach to protect networks across mobile network operators, enterprises, aggregators, vendors and at government level” said Brian Collins, SVP Security, AdaptiveMobile Security. “The lessons of 3G and 4G must be learnt and our ground-breaking unified approach to 5G network security will be critical in protecting operators’ networks, enterprise customers and subscribers from new and emerging cybersecurity threats – and it is fantastic to see our work resonating with such a prestigious panel of judges from across the telecoms ecosystem.”

By identifying and correlating sources of external and internal attacks on 5G networks and subscribers, the [AdaptiveMobile Security 5G Network Security Solution](#) enables governments, regulators, and MNOs to understand the nature of emerging threats, pinpoint threat actors attacking their network, and prevent internal attacks on network slices. This solution proactively manages defences against known sources of signalling attacks so MNOs can understand, predict, and defend against attackers.
