

QleanAir delivered 23.2 billion m³ of cleaned air in the first quarter 2026

QleanAir increased the delivery of cleaned indoor air to 23.2 (21.9) billion cubic meters in the first quarter. This means an increase of 5.6% compared to the first quarter of 2025.

QleanAir delivered 23.2 (21.9) billion cubic meters cleaned indoor air for the first quarter. This corresponds to an increase of approximately 5.6% compared to the first quarter previous year. QleanAir reports the volume of cleaned indoor air through its air cleaners, cabin solutions and cleanrooms quarterly on a global basis. As of the first quarter 2026 we start reporting the total volume of cleaned air in the quarter instead of per month as we have formerly done. We do this change to align with the fiscal quarterly reporting.

Air pollution is considered the world's largest environmental threat to health and accounts for 7 million premature deaths around the world each year according to the WHO. Pollutants accumulate indoors where the air can be up to 50 times more polluted than outdoor air. This is problematic because we spend about 90% of our time indoors.

Air quality has a significant impact on human health, well-being, and cognitive ability, both in the short and long term. In many organizations, air quality is also critical for the products' quality, lifespan and technical cleanliness. Clean air also contributes to mechanical equipment working better, lasting longer, and requiring less maintenance. QleanAir provides air cleaning solutions for most types of professional and public spaces.
