

# Wirtek Strengthens the Foundation for Scalable Growth

**Wirtek announced yesterday shortly before market close its annual report for 2025, which marked a transition year focused on adapting the business for future growth.**

Wirtek achieved revenue of DKK 64.3 million in 2025 with an EBITDA of DKK 1.7 million. This represented a decline compared to 2024, influenced by a more challenging market and investments in building new capabilities, particularly within the Solutions division. Additionally, key cost optimization measures implemented during the year ensured that profitability gradually improved over the course of the year.

These investments place the company in a strong position to deliver solid earnings growth already in 2026, where revenue is expected to reach DKK 65–70 million with an EBITDA of DKK 3–6 million. This implies a significant improvement in the EBITDA margin, expected to be 4.3–9.2% compared to 2.6% in 2025.

In the past year, Wirtek has also focused on positioning itself for the future in a changing world. The company has therefore launched a new strategy aimed, among other things, at increasing productivity through AI-assisted execution. The IT industry is currently undergoing one of its most significant transformations, which is why Wirtek has also established a dedicated AI team tasked with leading the company's technical transformation.

Despite a 10% decline in revenue compared to last year, the company's energy business area continued to deliver solid results, accounting for 44% of revenue in 2025 compared to 34% in 2024. This development is expected to continue into 2026 and will therefore be a major contributor to overall performance for the year. However, the challenging market conditions seen in 2025 are also expected to persist into 2026, albeit with cautiously improved prospects.

CEO of Wirtek, Michael Aaen, states:

2025 was a year marked by strategic transition. By strengthening our services and investing in scalable solutions, we are positioning Wirtek for renewed growth from 2026.
