Soltech Energy launches Soltech Home - a concept for the consumer market

The Soltech Group now launches an overall solution for the Swedish consumer market. The Soltech Home concept offers solar energy solutions that enable an efficient optimization of energy production, energy use and reduced energy costs for private individuals and farmers.

Soltech is conceptualizing its solar energy offer with solar, electric car charging and energy storage to the consumer market by launching the Soltech Home concept. The concept includes a combination of products and services that will help households use their self-produced solar electricity in the best possible way, when it is needed the most and at the lowest possible price.

To optimize both energy production and consumption, the concept includes solar panels, electric car charging, battery storage, support services, electricity purchase agreements and a separate control unit connected to the inverter. The customer can then monitor, control and optimize their functions in the Soltech Home app.

– We are very proud to launch Soltech's consumer concept, which sharpens our offering for private individuals. With our long experience of helping homeowners with solar energy solutions, together with Soltech Home's composition of products and services, an automated solution has been created. This enables an efficient energy economy and the concept creates a great solution for the household, without the customer having to think about how and in what way it should be done. We take care of everything, **says Patrik Hahne, CEO of Soltech Energy.**

An overall solution that contributes to the green transition

Soltech Home enables homeowners and farmers to easily monitor, make their investments future-proof and optimize their energy use, and create higher predictability and at the same time get an improved energy economy. Something that is becoming increasingly important in today's fast-moving, volatile and more unpredictable energy market.

– With Soltech Home, the customers get a tailor-made overall solution that enables both reduced electricity costs and income from the household's self-produced solar energy. Our products and services together with the Soltech Home app make it safe, and easy for private individuals to optimize their own use of solar electricity, get a more predictable energy economy and at the same time contribute to the green transition,

Press Release**10 October 2024 13:00:00 CEST**

says Gustaf Stetler, CEO of Soltech's subsidiary Soldags, the concept developer for Soltech Home.

Soldags is a concept developer and has developed the Soltech Home concept together with Soltech. The ambition is that the concept will be offered in the future by the Soltech Group's companies that offer solar energy solutions to the private market.

How Soltech Home works:

- Experienced solar and battery advisors guide the customer to a safe investment
- The energy flows in the building are analyzed and optimized through a smart algorithm that adapts the system to the property's behavior patterns and takes into account things such as weather and the customer's electricity trading and electricity network agreements
- All units are integrated and optimized for maximum profitability and efficiency
- All services are integrated and enable a profitable solar energy investment
- Phase optimization automatically ensures that the electricity you produce is used more efficiently
- The battery stores excess electricity and enables lower grid charges through peak power creation
- Batteries also enable revenue by supporting the electricity grid with balancing services
- In the service subscription, it is possible to choose an integrated electricity purchase agreement for maximum return
- After the installation, Soltech offers support and service that optimizes the production and lifespan of the solar panels
