

SUBGEN AI ADDS AI QUALITY AND COMPLIANCE LAYER TO SERENITY STAR, SUPPORTING ENTERPRISE CONVERSION AND REVENUE GROWTH

Subgen AI AB (Nasdaq First North: SUBGEN), a European provider of enterprise-grade generative AI infrastructure and software, today announced a partnership with RagMetrics that directly strengthens the commercial appeal of its Serenity Star platform. The integration adds built-in AI quality control and EU AI Act compliance monitoring, two of the most significant barriers preventing large enterprises from committing to AI at scale. By removing these barriers within Serenity Star, Subgen AI makes its platform more competitive and its sales cycles shorter, supporting the company’s revenue growth targets.

Enterprise customers increasingly require proof that AI systems are accurate, auditable, and compliant with EU regulation before they commit to a platform. Until now, this typically required companies to source, integrate, and manage a separate evaluation toolset – adding cost, complexity, and delay to purchasing decisions.

The partnership integrates RagMetrics as a Specialized Solution within Subgen AI’s Serenity Star technological network, adding a dedicated AI quality and compliance layer for generative AI agents deployed on the platform. With RagMetrics embedded, Subgen AI customers will have access to a complete end-to-end AI management and quality assurance solution from day one. This removes a key objection in the sales process, reduces time-to-deployment, and deepens customer commitment to the platform – all of which support recurring revenue growth.

“One of the most consistent questions we hear from enterprise prospects is how they can be certain their AI agents are performing correctly and remain compliant with EU regulation,” said Lorenzo Serratosa, CEO of Subgen AI. “This partnership answers that question directly inside Serenity Star. It makes us easier to buy, faster to deploy, and more defensible as a long-term platform of choice. That translates into commercial momentum, and commercial momentum is what drives our growth targets.”

About the Integration

RagMetrics specializes in AI evaluation and monitoring, providing the tools enterprises need to verify that their AI systems produce accurate, consistent, and regulation-ready outputs. Through the integration with Serenity Star, customers gain a comprehensive framework for ensuring quality, compliance, and performance in AI deployments.

Key capabilities enabled by the partnership include:

- *Automated scoring and hallucination detection across all AI agents deployed on Serenity Star*
- *Continuous monitoring of agent performance, behavioral drift, and EU AI Act regulatory compliance throughout the full lifecycle*
- *200+ preconfigured evaluation criteria, with the ability to define custom, business-specific metrics*
- *Real-time analytics and insights on quality, latency, and cost across all deployments*
- *Flexible deployment options – cloud, SaaS, or on-premise – fully aligned with Serenity Star's architecture*

"Enterprise AI adoption has been held back by one question: can we trust what the AI produces? Embedding RagMetrics inside Serenity Star answers that question at the infrastructure level - every output scored, every agent accountable, before anything reaches a customer," said Olivier Cohen, CEO, RagMetrics. **"For organizations deploying AI at scale, that's the difference between a pilot and a production commitment. We're proud to be part of Subgen's platform."**

Partnership Structure

Under the terms of the partnership, RagMetrics is embedded within Serenity Star as an integrated specialist solution. Subgen AI retains all direct customer relationships and platform licensing revenues. RagMetrics will refer qualified enterprise leads to Subgen AI, representing an incremental commercial channel at no additional acquisition cost. The arrangement is technology and referral-based; there is no equity consideration or material financial commitment on Subgen AI's part.
