H100 partners with Coinbase to strengthen its balance sheet and support business development

H100 Group AB ("H100" or the "Company") today announces a partnership with Coinbase, one of the world's largest regulated digital asset platforms. The partnership supports two complementary objectives: It gives H100 institutional custody, trading and financing infrastructure for its balance sheet of around 3,500 Bitcoin, valued at approximately SEK 2.3 billion (USD 226 million). This is key for H100's goal of increasing BTC per share for all its shareholders. In addition, the partnership provides the infrastructure to execute on the vision set out by its majority shareholder: to build the products, services and relationships that serve a new generation of investors.

H100's balance sheet

H100 holds approximately 3,506 Bitcoin. Based on a Bitcoin price of USD 64,600 on 15 November 2026, the holdings were worth around SEK 2.3 billion (USD 226 million). The Company has outstanding convertible loans totalling approximately SEK 219 million (USD 22 million). These carry 0 per cent interest, mature on 9 July 2030 and correspond to less than 10 per cent of the stated value of the Company's Bitcoin holdings.

H100’s balance sheet provides a long-term capital base. Unlike investors in an open-ended fund, shareholders cannot redeem their shares against the underlying assets. This allows the Company to plan and develop its activities with a long-term perspective.

Institutional infrastructure

Coinbase, with its Prime services and Deribit derivatives exchange, provides prime broker services and trading in digital assets in one integrated platform. It plays the role a bank's prime brokerage plays for a traditional investment firm, providing custody, financing and execution in one place.

Through the partnership, H100 and its subsidiaries use Coinbase and Deribit for custody, trading and financing.

PDI AS, H100’s wholly owned trading and technology company, develops the software and trading systems used to manage H100’s Bitcoin balance sheet. Increasing Bitcoin per share, the amount of Bitcoin behind each share, remains the principal objective of these activities. The software, trading strategies and access to Coinbase’s infrastructure support that objective within the Company’s Bitcoin policy and mandate, with protecting H100’s Bitcoin holdings as the first priority.

Executing on the vision

In his letter to shareholders of 11 June 2026, majority shareholder Geir Harald Hansen set out the ambition to position H100 as "a leading European alternative and digital asset manager", building the products, services and relationships to serve a new generation of investors.

Bitcoin has created a new generation of wealth, and few companies in Europe are built to serve it. H100, one of Europe's largest listed Bitcoin treasury companies, intends to take that position.

The initial focus will be on family offices and high net worth individuals seeking a dedicated partner for Bitcoin-related investments and financing. H100 intends to combine experience in financial markets, systematic trading and technology with an understanding of Bitcoin and the opportunities developing around it. The infrastructure used to manage H100’s own balance sheet provides a foundation for this work, and partnerships will give the Company access to specialist capabilities as it develops its offering.

The work is led by Executive Chairman Sander Andersen, who has worked with family offices on Bitcoin-related investments since 2022, and Chief Executive Officer Eirik Grøttum, who has a background in systematic trading, software development and asset management and has worked with the Company's majority shareholder for many years.

H100 will announce further details as products and services are established. Those who wish to discuss their needs are invited to contact the team directly.

Sander Andersen, Executive Chairman of H100, comments:

"This partnership gives H100 stronger tools for our own balance sheet, and we use them on our own Bitcoin first. Bitcoin per share remains the measure we run the Company by, and these tools are there to help us deliver on it, not to add risk.

That is also what lets us execute on the ambition we have set for H100. Every major asset class has specialist companies that guide investors into it. Bitcoin will be no different. It is a USD 1.5 trillion asset class where traditional investors still have few options beyond owning the asset itself. A new generation of investors wants a dedicated partner that understands the risks and opportunities Bitcoin introduces, and H100 is building that company. We build it through partnerships, because networks compound over time. This is the first of several, and the next is already under way."

Lauren Abendschein, Head of Institutional Sales at Coinbase:

“Bitcoin treasury companies have grown into an established part of our institutional client base. For these firms the priorities are: custody they can rely on; liquidity when the market moves, and financing against the same balance sheet. Coinbase Prime brings all three into one platform. We are proud to support H100 as it expands the capabilities of its Bitcoin treasury.”
