

Dataproces reports growth in sales of software agreements in September

Dataproces today published a sales update for September, showing growth in sales of software agreements.

In September, Dataproces signed 11 new software agreements in the Danish market, comprising 5 for KØS, 4 for MARS, 1 for MARC and 1 for KommuneProfil. This is a solid improvement on the preceding months, when the company signed 2 new software agreements in August and 5 in July. Since May, when the new communication policy took effect, Dataproces has signed 29 new software agreements in Denmark. In addition, the company signed 5 new data analysis agreements in September.

In the 2025/26 financial year, the average contract value per software agreement signed was DKK 54.765, while the average value of a data analysis agreement was DKK 254.433. The average contract values are based on historical data and therefore cannot be used as a precise estimate of the value of future agreements, but only as a guideline.

In September, Dataproces also published its report for the first quarter of its non-calendar 2026/27 financial year, in which it maintained its outlook for the year. The company still expects revenue of DKK 50-53 million, EBITDA of DKK 15-17 million and EBIT of DKK 7-9 million. The company has also decided to put its office property up for sale. The decision is part of its focus on efficient capital allocation and is intended to concentrate resources on the continued development and growth of its core business within software and data analysis.
