

## INVISIO further expands capability of market-leading wireless intercom system

Tactical communications expert INVISIO is expanding the capability of its market-leading intercom system made for tailored user and radio communication. The expansion will deliver enhanced mobility, flexibility, interoperability and functionality for mission-critical users.

INVISIO Link™, due to ship in the next few months, provides wireless access to the INVISIO Intercom system by adding a body worn dongle and a base station to the equipment setup.

Two additional new products - the INVISIO Intercom Switch and the INVISIO Intercom Loudspeaker – further expands the intercom ecosystem and allow communication to larger user groups.

The intercom switch provides power and enables interconnectivity between multiple Link Stations to give wireless access to up to 16 users. In a wired setting, the switch can expand the number of wired users up to 27 via multiple intercoms. The loudspeaker can play audio to groups in settings such as a command center or vehicle.

Announced in 2024, INVISIO Link™ offers a range of benefits, including:

- **Tailored connectivity:** Keeps users always connected, with wireless access for tailored user and radio communication and seamless integration of platform communication.
- **Unlimited mobility:** No tangled cords enable complete mobility, eliminating current platform and proximity issues.
- **Seamless communication:** Smooth transitions between mounted and dismounted, and wired and wireless, with auto-connect functionality for easy use.
- **Uncompromised quality:** Uncompromised speech intelligibility along with strong connectivity, even in challenging environments.
- **Secure and lightweight:** Unparalleled in size and weight, with a body-worn dongle weighing just 70g (2.5oz). System security through AES 256 encryption and low detectability thanks to user-adjustable transmitting power.
- **Mounted anywhere:** Can be fixed to MOLLE webbing, stored in a bag or permanently installed. Leight weight of 270g (9.5oz) and small footprint of 186 x 100 x 30mm (7.3 x 3.9 x 1.2 in) ensures easy positioning for optimal transmission, with optional external antenna support for challenging RF installations.

Jacob Tranegaard, Director Intercom Product Management at INVISIO, said: "These advances ensure the INVISIO Intercom eco-system continues to excel in flexible, tailored wireless communication that offers a whole range of use cases, from military vehicles to maritime uses and command post communications, and non-military scenarios.

INVISIO Link™ gives users more freedom and mobility than ever, along with uncompromised speech intelligibility, secure encryption and a small footprint. The switch and the loudspeaker further expand INVISIO's capability to ensure our systems remain market-leading in the world of tactical communications."

INVISIO Link™ is available for demo at SOF Week - visit Booth #1541 at Level 3 (Danish Pavilion) or INVISIO's yacht, "Reel Blonde" next to the Tampa Convention Center. Alternatively, visit [invisio.com](https://invisio.com) or contact your local INVISIO representative.

**About INVISIO AB (publ)**

INVISIO develops and sells advanced communication systems that provide hearing protection and enable professionals in noisy and mission critical environments to communicate and operate effectively. The company's two brands, INVISIO and Racal Acoustics, combine expertise in acoustics and human hearing with broad engineering knowledge in software, materials technology and interfaces. Sales are via the head office in Copenhagen and sales offices in the USA, France, the UK, Italy and Thailand, as well as via a global network of partners and resellers. INVISIO's registered office is in Stockholm, Sweden, and the company's share is listed on Nasdaq Stockholm (IVSO). Read more at [www.invisio.com](https://www.invisio.com).
