

Flerie's portfolio company AnaCardio reports strong Phase 2a data for AC01 in patients with heart failure

Flerie AB's (publ) portfolio company AnaCardio has reported strong topline results from a Phase 2a clinical trial of its leading drug candidate, AC01, tested in patients with heart failure and reduced ejection fraction (HFrEF). These promising results support progressing AC01 into a Phase 2b study and strengthen Flerie's confidence in the company's ongoing clinical development.

In AnaCardio's Phase 2a segment of the GOAL-HF1 clinical study, the drug candidate AC01 demonstrated a favourable safety and tolerability profile. Exploratory measures of efficacy showed encouraging, consistent signs of rapid, sustained improvements in haemodynamics and cardiac structure and function over a 28-day treatment period.

"We are very pleased with AnaCardio's encouraging Phase 2a data for AC01. It strengthens our confidence in the company's ability to keep progressing its clinical development and tackle a significant unmet medical need among the large population of patients with heart failure and reduced ejection fraction," says Mark Quick, Partner at Flerie and board member of AnaCardio.
