

Maven Wireless expands into Spain - secures Tenerife airport order

Maven Wireless has received an order for a Distributed Antenna System (DAS) for public safety through a new local partner Radiotrans in Spain. The order is valued at approximately SEK 2 million and marks the company's entry into the Spanish market.

The system will be installed at Tenerife Norte Airport (Spain) by Radiotrans, a specialized integrator in critical communications infrastructure. Ensuring uninterrupted wireless coverage in critical environments such as airports is essential for operational continuity and public safety.

Radiotrans will be responsible for system engineering, deployment, integration and commissioning, ensuring seamless implementation within the airport's operational framework.

"This opportunity is particularly gratifying as it represents a new partnership with Radiotrans, a Spanish technology company specializing in critical wireless infrastructure with international reach, and our entry into the Spanish market with another airport vertical order." says Anders Olin, CEO of Maven Wireless.

"We are proud to deploy Maven Wireless' advanced DAS technology at Tenerife Norte Airport and to contribute to strengthening secure communications infrastructure in Spain. This project marks an important milestone in our collaboration with Maven Wireless and reinforces our commitment to delivering high-performance solutions for mission-critical environments," says Alfonso Alarcos, Vice President, Radiotrans.

About Radiotrans

Radiotrans is a Spanish technology company specialized in advanced radiocommunications and critical wireless infrastructure. The company delivers engineering, integration and deployment of secure communication systems for airports, transportation networks, public safety organizations and other mission-critical environments. With strong technical expertise and international reach, Radiotrans supports customers in designing and implementing high-performance communication solutions adapted to complex operational requirement
