

Diadrom to Attend Deep Tech Momentum in Berlin with Kista Science City

Diadrom Holding AB (publ) today announces that the company will participate in Deep Tech Momentum 2026 in Berlin on 20–21 May through Kista Science City's partnership with the event organizer. Diadrom is one of the Swedish companies highlighted in the curated group being brought to the event.

Deep Tech Momentum is positioned as a European marketplace for deep tech and AI, where startups, scaleups, investors, corporates and decision-makers come together through curated matchmaking, pitch formats and programs designed to accelerate partnerships, investment and commercialization. For Diadrom, participation represents an opportunity to engage with new customers, partners and investors in a highly relevant international setting.

Diadrom will be represented on site by CTO Jonas Hellberg and Lead Developer Dawid Ejdeholm Wirsén. The participation strengthens the company's visibility in advanced software, industrial digitalization, cyber and defence-related technology, and aligns well with Diadrom's position at the intersection of AutoTech and AutoDefense.

"This is an important opportunity for Diadrom. We see a growing need for robust software and system understanding in complex and mission-critical environments, and Deep Tech Momentum provides us with a relevant European platform to further strengthen our position," says Viktor Eliasson, CEO of Diadrom Holding AB (publ).

Kista Science City works with business development and international expansion for growth companies, with market entry, matchmaking and introductions to customers, partners and investors as central parts of its offering.

For Diadrom, participation is a natural step in the company's continued development and international positioning. As European industry and defence become increasingly software-driven, the need for solutions that create quality, traceability and control in complex system environments also continues to grow. Against that backdrop, a presence in the right European forums is important both commercially and strategically.
