

FlexQube receives pilot order for AMR system from leading European retail company

FlexQube has received a pilot order for the company's Navigator AMR system (Autonomous Mobile Robot) from one of Europe's largest fashion and retail companies. The order value amounts to 1.1–2 MSEK, depending on the outcome of the tests to be carried out.

The pilot project will be conducted during the second quarter of 2026 at one of the customer's facilities in Poland. During a 12-week test period, the Navigator system will be implemented and evaluated for continued operation at this facility.

If the pilot is successful, there is potential for a broader rollout to additional customer facilities both in Europe and other parts of the world.

Anders Fogelberg, CEO of FlexQube, comments: *"This is another important and successful step for FlexQube in our expansion within the AMR segment. It is our first order for our AMR system in Europe outside of Sweden, and the customer is one of the most well-known players in European retail. The fact that we now have the opportunity to demonstrate our technology in their operations is both a strong validation and a significant future business opportunity."*

About FlexQube

FlexQube is a technology company headquartered in Gothenburg, Sweden with subsidiaries in USA, Mexico, Germany and England. FlexQube offers solutions for cart-based material handling using a patented modular concept. FlexQube develops and designs customized solutions for both robotic and mechanical cart logistics. Through the own developed and unique automation concept FlexQube can offer robust and self-driving robotic carts. FlexQube has more than 1200 customers in 40 countries with primary markets being North America and Europe.
