

INVISIO acquires product line from Ultra PCS to further enhance its integration capabilities of the modern soldier system

INVISIO acquires UK company Ultra PCS's UltraLYNX™ product line, which enables seamless integration of devices from different suppliers, creating an ecosystem within the modern soldier system. A number of employees at Ultra PCS will join INVISIO as part of the USD 3,5 million transaction.

UltraLYNX™ software-defined hubs enable seamless integration of devices from different suppliers, including those not originally designed to work together. The product line creates an ecosystem that provides audio, data connectivity and power, reducing the cognitive and physical burden on users.

This strategic acquisition will enhance INVISIO's ability to deliver fully integrated tactical body-worn systems capable of handling audio, power and data, along with leading-edge computing power. It will allow INVISIO to provide a seamless and robust plug-and-play communication system that meets the evolving needs of modern military and defense operations.

The UltraLYNX™ product will be seamlessly integrated into the INVISIO ecosystem, acting as a catalyst for the development of future innovative and cutting-edge products.

INVISIO facilitates the modern soldier system

The modern soldier system is a complex network of devices—radios, weapon sights, navigation tools and sensors—sourced from different suppliers with unique standards. These devices must share data, audio and power within a unified ecosystem.

Integration is challenging due to differing protocols and power demands and the need for real-time communication. UltraLYNX™ simplifies this process by harmonizing protocols, managing power and enabling seamless device interoperability. As a result, soldiers can focus on their mission without being burdened by complex setup requirements and incompatible equipment.

The deal is completed today and UltraLYNX™ will be fully incorporated under the INVISIO brand.

Lars Højgård Hansen, INVISIO CEO, commented: "This acquisition aligns with our strategic vision to expand and enhance our product offerings and provide our customers with cutting-edge solutions that improve operational efficiency and effectiveness. The UltraLYNX product line will add significant capabilities to our already market leading soldier systems.

The acquisition strengthens INVISIO's position in our markets, which are undergoing a digital transformation. We expect, after the initial integration, that the product line will contribute significantly to INVISIO's revenues in 2026 and onwards."

About INVISIO AB (publ)

INVISIO develops and sells advanced communication systems that provide hearing protection and enable professionals in noisy and mission critical environments to communicate and operate effectively. The company's two brands, INVISIO and Racal Acoustics, combine expertise in acoustics and human hearing with broad engineering knowledge in software, materials technology and interfaces. Sales are via the head office in Copenhagen and sales offices in the USA, France, the UK, Italy and Thailand, as well as via a global network of partners and resellers. INVISIO's registered office is in Stockholm, Sweden, and the company's share is listed on Nasdaq Stockholm (IVSO). Read more at www.invisio.com.
