

Great Interest in Enviro and Green Technology at Pareto Securities Energy Conference in Oslo

Scandinavian Enviro Systems (Enviro) and green technology in general, attracted great interest at this year's edition of the Pareto Securities Energy Conference in Oslo. The company's CFO, Fredrik Aaben, presented Enviro both in front of an audience and during individual investor meetings at the conference.

The investor conference is one of the largest in Europe in the energy sector, annually attracting more than 150 participating companies and over 2,000 attendees. Among the participating companies in Oslo were several that, like Scandinavian Enviro Systems, are focused on green technology. Enviro participated on the first day of the conference and was represented by the company's CFO Fredrik Aaben and the company's IR manager Mårten Wikforss.

In addition to a company presentation by Fredrik Aaben on one of the conference stages, the company also held individual investor meetings with international investors.

Outside Uddevalla, Enviro is currently completing the first full-scale tire recycling plant based on the company's leading pyrolysis technology. In the first phase, the plant will have the capacity to process 34,500 tons of end-of-life tires and is being constructed by Enviro on behalf of the joint venture company Infiniteria, which is owned by Enviro together with Antin Infrastructure Partners. The plant is expected to be completed by the end of 2025 and reach PAC (provisional acceptance certificate) by mid-2026.

Even before construction began, the joint venture company had signed multi-year supply agreements with leading manufacturers in the tire, rubber, and oil industries for recycled materials worth more than SEK 2 billion.

Note: The presentation that Fredrik Aaben held yesterday will be published as a PDF on the company's website under reports & presentations <https://envirosystems.se/investor/reports-presentations/>

Scandinavian Enviro Systems contributes to enhanced environmental and economic sustainability using a patented technology for the recovery of valuable raw materials from scrapped and end-of-life products, including tires. The production of new tires using carbon black recovered with Enviro's technology reduces carbon dioxide emissions by up to 93 per cent compared with the use of virgin carbon black. Enviro has its head office in Gothenburg and a plant for the recycling of end-of-life tires in Åsensbruk. The largest owner is the French tire manufacturer Michelin. Enviro was founded in 2001 and is listed on Nasdaq First North Growth Market. www.envirosystems.se
