

Organizational change at Freemelt north America

Darin Everett, President of Freemelt-Americas Inc., has announced his resignation and will leave the company by the end of September 2025. He joined Freemelt in 2023 and has been responsible for establishing the company's presence in the north American market.

"We are grateful for Darin's dedication and hard work, which have been instrumental in building Freemelt's operations in north America. We wish him all the best in his future endeavors," says Daniel Gidlund, CEO of Freemelt.

The process to identify Darin's successor has started. The CEO will act as the Regional President until a successor is announced.

About Us

Freemelt develops advanced 3D printers for metal components and aims to become the leading supplier in additive manufacturing (AM) using E-PBF technology, targeting SEK 1 billion in revenue by 2030. The solutions primarily support companies in the defense, energy, and medical technology sectors in Europe and the USA, enabling them to drive innovation and improve production efficiency. Founded in 2017, Freemelt has expanded its product portfolio to include three printer models, with two designed for industrial production and one (Freemelt ONE) targeting research institutes and universities. The modular industrial printers (eMELT) leverage E-PBF technology, delivering significantly higher efficiency compared to other machines on the market while maintaining flexibility in metal selection.

Freemelt generates revenue primarily through the sale of advanced 3D printers at fixed prices, complemented by support and maintenance services, which are expected to account for 25% of total revenue by 2030.

The company is now focused on further industrializing its product and service portfolio and driving commercialization in the European and North American markets. Read more at **www.freemelt.com**
