

Creturner changes AI processing partner

Change executed from Cudo Compute to RunPod

Creturner has early on been focused on becoming a part of AI processing and has collaborated deeply with Cudo Compute Ltd in England. The development has not reached the goals set by Creturner and therefore we are switching to RunPod Ltd. RunPod Ltd is an American fast-growing company and shows significantly better occupancy rates. Creturner initiated a deeper evaluation of RunPod in 2024 and the intention was to share resources between the two players. Cudo has had a strategic focus that is increasingly moving away from Creturner's target audience, therefore the decision was taken in early February 2025 to fully focus on RunPod for the HPC resources (High Performance Computing). The shift is now complete and can be evaluated on an ongoing basis, it is reasonable to believe that this result will take a few months to demonstrate.

Creturner's strategy is to increase resources when the results of AI processing indicate that it is necessary. We are also prepared to quickly expand to pure inference processing when we see that the market, which is expected to be the dominant one in the future, is increasing in real size, so far it is not present. To this end, Creturner has acquired priority access to pure specialised inference hardware.

Contact details

Creturner Group AB is a group with two business areas in environmental technology.

The digital part is a technical computing business that is expanding to strengthen its long-term potential and create a presence in the fast-growing market for high-performance computing (HPC) capacity. The company has its own facilities in Sweden with low-cost energy production to reduce raw material costs and environmental impact.

The environmental part offers corporate customers an efficient and permanent method to offset their activities. The method is based on BCR (Biochar Carbon Removal), which involves converting residual biomass into the element carbon and storing it to reduce the amount of carbon dioxide in the atmosphere. Corporate customers of Creturner can then purchase carbon offsets in the same way they traditionally offset for climate change, for example by planting trees. Unlike tree planting, Creturner's approach is immediate, permanent and clearly measurable. Monitoring is done through linked smart contracts that give the customer insight into the results and future financial return of the environmental investment. www.creturner.com

Creturner is listed on NGM Nordic SME in Stockholm and on the Stuttgart Stock Exchange in Germany.
