

Diadrom Software joins Kvaser's TA network

Diadrom Software AB, a wholly owned subsidiary of Diadrom Holding AB (publ), is a leading software company in diagnostics of Autotech, has signed an agreement with Kvaser and joined Kvaser's Technical Associate (TA) network. Kvaser is well known for their Controller Area Network (CAN) development experience and more than 100 products to their name.

As a technical associate, Diadrom Software AB will implement support for the Kvaser hardware interfaces in the test automation tool Diadrom Dolphin. This will help our customers to connect any Kvaser hardware interface with Diadrom Dolphin.

"We have supported Kvaser hardware for a number of years and see an opportunity to build out our ecosystem, providing one point of purchase for embedded software development projects. CAN features in many of our projects and with an evolution to CAN FD in applications such as radar, Kvaser's strong reputation and experience in CAN and CAN FD helps us meet those customer needs with confidence." – Jonas Hellberg, Head of Product Development, Diadrom Software.

"With open libraries and a free API, Diadrom has a similar ethos to Kvaser. The company has experience throughout the product lifecycle, creating systems that interact with R&D, production, and aftermarket processes; something that we at Kvaser share. We welcome them to Kvaser's ecosystem and look forward to a fruitful collaboration," – Silvia Kuller, Head of European Sales at Kvaser AB.

"Diadrom continuously work to improve our products to meet the customer needs and this is a great opportunity to complement our offer with support for Kvaser's interface products. We are very proud to be a technical associate to Kvaser and look forward to a long and productive collaboration," – Carl Johan Andersson, CEO, Diadrom Holding AB.

Diadrom's management believes that it is strategically important to be a technical associate to Kvaser with their interface products.
