

Insplorion hydrogen sensor in new proof-of-concept project

Insplorion AB (publ) hereby announces that a proof-of-concept project has been agreed with a large international customer operating in the chemical production field. The order value of the initial project is 0,3 MSEK and involves the delivery of Insplorion prototype NPS-P1 sensors.

The intention of this initial project is to demonstrate the performance of an Insplorion H2 sensor prototype in field tests in a highly corrosive environment. The customer has struggled to find a suitable solution for the harsh conditions of its production facility, and the Insplorion technology could potentially be well suited for such environments.

“We are very excited for this project, as it shows the need for new hydrogen sensing capabilities also in this sector. These pilot projects are of great value for Insplorion, as they both demonstrates the need for our sensors and serve as a natural stepping stone into larger commercial projects “, says CEO Johan Rask.

About Insplorion

Insplorion’s vision is to use sensor technology for an accelerated transition to a sustainable future. With its unique sensor platform NanoPlasmonic Sensing (NPS), Insplorion operates within two fields; hydrogen sensors and research instruments. The hydrogen sensors enable safe and efficient deployment of hydrogen infrastructure through its unique benefits in detection speed, selectivity and ability to function in environments where many sensor technologies cannot. Our instruments give scientists around the world real time data within battery research and surface processes in fields like catalysis, material- and life science. Naventus Corporate Finance AB is Insplorion's Certified Adviser on Nasdaq First North.
