The Danish Society for Extracellular Vesicles

Presented at the 7th Danish Society for Extracellular Vesicles Conference, showcasing our latest EVEREST project results focused on improving extracellular vesicle isolation throughput

Q3

INTERIM REPORT
JANUARY 1 – SEPTEMBER 30, 2026
ACOUSORT AB (PUBL)

Summary of the interim report

FINANCIAL SUMMARY

The "Company" or "AcouSort" refers to AcouSort AB (publ) with corporate registration number 556824–1037.

July–September 2026 for the Group

- Net sales amounted to TSEK 1,657 (1,248)
- Result before tax amounted to TSEK -2,984 (-2,692)
- Result per share* was SEK -0.14 (-0.13)
- Equity ratio** amounted to 41% (85%) on September 30, 2026

January–September 2026 for the Group

- Net sales amounted to TSEK 5,919 (4,394)
- Result before tax amounted to TSEK -8,885 (-9,523)
- Result per share* was SEK -0.42 (-0.53)
- Equity ratio** amounted to 41% (85%) on September 30, 2026

July–September 2026 for the Parent company

- Net sales amounted to TSEK 1,656 (1,289)
- Result before tax amounted to TSEK -2,965 (-2,639)
- Equity ratio** amounted to 48% (87%) on September 30, 2026

January–September 2026 for the Parent company

- Net sales amounted to TSEK 5,884 (4,383)
- Result before tax amounted to TSEK -8,824 (-9,292)
- Equity ratio** amounted to 48% (87%) on September 30, 2026

Financial runway

Cash and cash equivalents, including cash received after the end of the period, support approximately fifteen months of planned activities at the current run rate.

* Earnings/loss per share: Profit/loss for the period divided by the average number of shares, 21,163,902. In the year-earlier period, the company had 18,083,250 (Jan – Sep) and 21,163,902 (Jul – Sep) shares.
** Equity ratio: Equity divided by total capital.

This document is essentially a translation of the Swedish language version. In the event of any discrepancies between this translation and the original Swedish document, the latter shall be deemed correct.

SIGNIFICANT EVENTS DURING THE THIRD QUARTER

- No significant event to report during the period.

SIGNIFICANT EVENTS AFTER THE END OF THE PERIOD

- On October 1, AcouSort announced it has entered into strategic OEM supply agreement with Calyrex Biosystems Inc. and Marketing agreement with Intelmetis Inc. combined with a SEK 15m convertible note financing.
- On October 22, the Company conducted an Extra General Meeting successfully resolving a directed issue of convertible notes of SEK 15 million to Houston based Calyrex Biosystems, Inc. The maximum dilution corresponds to approximately 22.9%, the convertible notes carry an interest of 5% and mature 30 months after the payment date, with the right for Calyrex to extend the maturity by an additional 30 months. Payment was received October 27.
- On November 6, AcouSort announced that the company has received a new project order from MFX with a total value of EUR 9,500. The project builds on the existing collaboration between the companies and will evaluate AcouSort's acoustic cell washing technology at increased flow rates.
- On November 11, AcouSort announced that the company has received a new order from German medical technology company Moeller Medical GmbH with a total value of EUR 13,000. The order covers further development and delivery of AcouSort separation modules and represents another step in the companies' ongoing collaboration around automated sample preparation for analysis of body fluids.
- On November 17, AcouSort announced that the company has signed a Letter of Intent with Italian IVD manufacturer Edif Instruments to initiate a collaboration exploring new business and development opportunities between the companies. The collaboration will begin with a six-month feasibility phase and represents a first step in evaluating a potential business partnership.

NOTE TO THE READER

Amounts in parentheses refer to corresponding period of the previous year.

Strengthened financial position and enhanced commercial capability

In October, AcouSort entered into strategic partnerships with Calyrex and Intelmetis, including an OEM supply agreement with Calyrex and a marketing consultancy agreement with Intelmetis. The agreement with Calyrex also comprises a directed issue of SEK 15 million in convertible notes. The directed issue was approved by an Extraordinary General Meeting on October 22. With these agreements, AcouSort in one stroke establishes a new and promising OEM agreement, strengthens its financial position and gets access to a strong commercial network in life sciences.

Net sales in the quarter amounted to MSEK 1.7 (1.3). Net sales for the first three quarters amounted to MSEK 5.9 (4.4), corresponding to a growth of 35% year-on-year.

THE AGREEMENT WITH CALYREX AND INTELMETIS AIMS TO ACCELERATE THE COMMERCIALIZATION OF OUR TECHNOLOGY

The agreement with Calyrex and Intelmetis is a very important milestone for AcouSort. First and foremost, it will strengthen our finances and provide us with a new well-funded owner and strategic investor. The OEM agreement adds another important player to our expanding customer list, whereas the marketing consultancy agreement is expected to bring additional clients to us in the US and later also in China.

We share the belief that acoustofluidics sample preparation has the potential to strengthen capabilities in cell therapy, diagnostics and laboratory automation, and our joint ambition is to bring AcouSort's technology to American life science companies and OEM partners. With added resources our ambition is to accelerate the translation of this innovation into scalable, US-deployed solutions that benefit researchers, manufacturers and, ultimately, patients.

CONTINUED FOCUS ON PARTNERSHIPS

Our core strategy is to achieve commercial success by establishing close collaborations with other companies, with the aim of establishing long-term OEM partnerships.

One of the partnerships I want to highlight in this report is our collaboration with MFX, a UK-based developer of next-generation scalable bioreactor platforms (see project CT5 on page 9). In 2026, MFX evaluated our technology for streamlining their innovative cell therapy manufacturing workflow. So far, the evaluation has been successful, and we are now implementing a small feasibility project as the next important step in this collaborative journey. This feasibility study will generate EUR 9,500 during Q4.

Another one of our important projects is CT1 involving a global life science company active in the cell therapy field. This collaboration is currently on hold to allow AcouSort time to optimize some aspects of our technology to meet the customer's requirements, and we are now increasing our product development efforts with external academic resources to achieve this. The technological challenges are substantial, but when we solve the issues at hand, we will be in a very good position to resume this collaboration as the CT1 customer's interest in our solution remains intact.

Further, our partnership with German Moeller Medical is steadily progressing with an optimized design request of the acoustofluidics separation module interface as well as ordering additional separation modules. This order generates revenues of EUR 13,000 in Q4.

Finally, our most recent partnership with the Italian IVD company, Edif Instruments, is a very interesting opportunity for AcouSort. If our initial feasibility project is successful Edif plan implementing our technology in relevant diagnostic systems of their own. But the ambition is to also offer the combined solution to other players as an OEM sub-system.

EXTENDED LEASING AGREEMENT IN ITALY

Since December 2025, we have a leasing agreement for an AcouWash system with an Italian core facility customer active in flow cytometry. After a successful first leasing term, the Italians have now decided to extend the leasing period for the full year of 2027, which will generate revenues of EUR 18,360 during 2027.

OUTLOOK

Looking ahead, our focus remains on converting our technology-leading position within automated cell sample processing across diagnostics, cell therapy, and lab automation by expanding both existing and new strategic partnerships over the coming year. Backed by a strengthened financial position, enhanced commercial capability, a highly proficient organization, and a continually expanding collaboration network, AcouSort is uniquely equipped to enter its next phase of growth and shape the future of sample processing technology. I look forward to keeping you updated as our core projects advance.

Torsten Freltoft – CEO
ACOUSORT AB

AcouSort at a glance

AcouSort is an innovative medical technology company developing critical components for instrumentation used in the diagnostics, cell therapy production and lab automation markets. AcouSort's components allow for automated refinement of biological samples such as blood or cell preparations, providing instrumentation manufacturers with a state-of-the-art ability to integrate sample processing steps that traditionally have to be performed manually.

OUR VISION & MISSION

Our vision is to improve healthcare impact and save lives across the globe by enabling more and better healthcare, faster! Our mission is to lead and drive the development and implementation of a new gold standard for automated sample preparation in clinical research, diagnostics and therapeutics. By providing solutions that radically change the way healthcare is provided today, we remove the bottlenecks for tomorrow's standard of care.

To realize our vision, AcouSort's main goals are:

- Support biomarker discovery and diagnostic assay development for critically ill patients with high sense of urgency
- Enable significant growth of the point-of-care market across healthcare sectors
- Streamline and automate cell processing to allow cell therapeutics to become broadly accessible
- Stay in the forefront of the acoustofluidics technology by continuously engaging in R&D activities with relevant international academics and life science players

By pursuing these goals, AcouSort aims to become the leading supplier of acoustofluidic sample preparation solutions for the healthcare market.

OUR STRATEGY & BUSINESS CONCEPT

AcouSort's strategy is to use our innovative technology to revolutionize today's healthcare by providing a solution to automate and integrate sample processing steps, allowing for a new generation of medical devices to be developed. Through collaborations with leading life science companies our integrated technology will eliminate manual handling steps while saving time, money, and ultimately lives.

Our commercialization strategy builds on our validated OEM business model offering sample preparation modules and solutions to providers of lab automation instrumentation, diagnostic equipment, and therapeutic systems. Through close collaborations we develop customized implementations of our core technology tailored to our partner's needs. AcouSort holds an ISO13485 certificate for the design, development, and manufacturing of components for the Medical Device industry.

To simplify evaluation of the technology, we have integrated our OEM components into user-friendly benchtop systems serving as innovation platforms for our partners. The systems are also used for sample preparation within research and assay development.

OUR TECHNOLOGY

AcouSort's core technology is acoustofluidics, i.e., a combination of sound waves (acousto) and microfluidics. Microfluidics allow for precise control of liquids while acoustics give us the ability to move particles of different biophysical properties. By combining the two technologies, we have the unique ability to move target cell types from one liquid to another. This allows us to fractionate the different components in a blood sample, isolate extracellular vesicles or wash cells to remove contaminants, without having any physical contact with the sample. As the technology is gentle and rapid, it provides a competitive alternative to conventional processing techniques such as centrifugation or filtration. By using acoustofluidics, AcouSort can streamline sample processing for a wide range of applications from biomarker discovery in basic research, to preparation of clinical blood samples prior to analysis, or sample purification in cell therapy manufacturing.

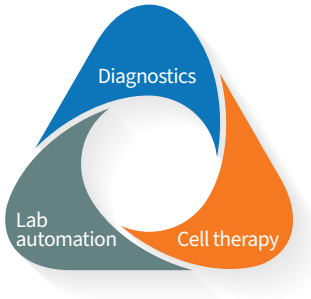

AcouSort's core technology builds on more than 25 years of acoustofluidics research and development headed by Thomas Laurell, professor at Lund University at the Department of Biomedical Engineering and co-founder and board member of AcouSort.

AcouSort major milestones

2020	2021	2022	2023	2024	2025
• Changed trading venue to Nasdaq First North Growth Market • Received ISO13485 certification	• AcouWash 2 launched • First OEM product AcouPlasmaOptical launched	• Increased commercial focus targeting the cell therapy market	• EUR 12.5M in EU funding for the AcouSome project • AcouTrap 3 launched • First regulatory approved system containing acoustofluidic technology	• Launch of first clinical system based on AcouSort background technology	• Launch of Evaluation kit with high-throughput OEM separation chip for cell wash applications addressing cell therapy production and lab automation markets

STRATEGY

Growth through research and innovation collaborations

AcouSort's acoustofluidic technology is perfectly placed to play a critical role in the healthcare of tomorrow. Cardiovascular diseases, infections, and cancer remain the leading causes of death globally, driving an urgent need for development of new and effective diagnostic and scalable cell therapeutic solutions.

Today's sample processing and manufacturing workflows are facing significant challenges as they rely on multiple manual handling steps. Manual work increases the risk of human errors, contamination and variability leading to high production costs and limits patient access to potentially life-saving diagnostics and treatments. The industry is therefore in clear need of new, enabling technologies that support automation, integration, and standardization.

SIGNIFICANT POTENTIAL IN CELL THERAPY, DIAGNOSTICS AND LAB AUTOMATION

AcouSort's ambition is to address some of the key challenges in cell therapy manufacturing by introducing solutions that enable automated and integrated sample processing. Our technology can be applied at several critical process steps to lower manufacturing costs, improve robustness, and support scalable production of cell-based therapies.

Within diagnostics, our ability to automate and integrate sample preparation enables the development of a new generation of diagnostic devices. By allowing analysis to be performed closer to the patient, at the point of care, results can be delivered immediately, supporting faster clinical decision-making and improved patient outcomes.

As laboratory and production workflows become more complex, demand is growing for automated solutions focusing on monitoring, quality control, and analytics. A growing share of AcouSort's industrial collaborations targets lab automation workflows, extending the use of our acoustofluidic technology for sample preparations.

GROWTH THROUGH OUR RESEARCH-TO-OEM MODEL

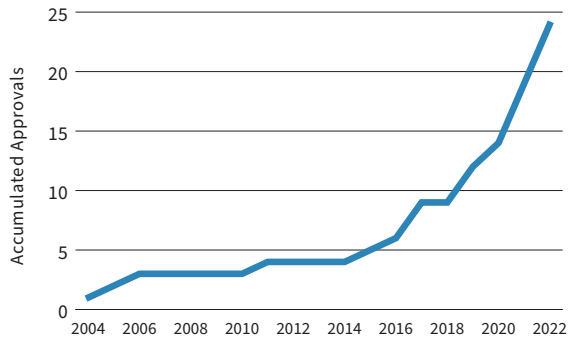

AcouSort's strategy is centered on its research-to-OEM business model, with the objective of establishing recurring revenues through sales of OEM modules to leading life science companies. Through multiple academic and industry partnerships across cell therapy, diagnostics, and lab automation, we are building a strong foundation for joint development and commercial integration of our technology.

AcouSort is currently targeting the North American and European markets, as well as selected markets in Asia.

INNOVATION WITH STRONG COMMERCIAL POTENTIAL

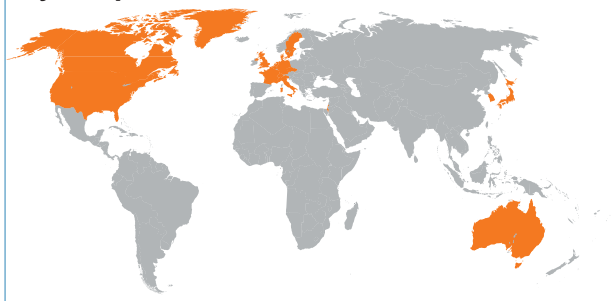

AcouSort's benchtop systems play an important role in supporting application development, technical validation, and maturation towards OEM integration. The systems are used in collaborations both with selected academic key opinion leaders and industry partners, providing early access to AcouSort's technology. These collaborations support the advancement of our technology with a clear focus on commercialization. Over the years AcouSort's innovation activities have partly been funded by the European Innovation Council (EIC), the EU, and Vinnova.

Cell & Gene Therapies Approved – World

Accumulated AcouSort OEM projects and system placements

DIAGNOSTICS

Advancement within point-of-care testing requires automation of sample preparation

To address some of the world's most prevalent and costly diseases – cardiovascular diseases, infectious diseases, and cancer – healthcare systems must deliver faster, more accessible, and more cost-efficient diagnostics. This need is amplified by ageing populations and increasing healthcare demands globally. One of the most effective ways to meet these challenges is to move diagnostic testing closer to the patient, enabling rapid clinical decision-making and earlier intervention. AcouSort's integrated and automated sample processing provides an optimal solution to achieve this.

Today, decentralized and point-of-care diagnostic testing at scale remains challenging as most blood-based assays require blood plasma separation prior to analysis. Consequently, a large fraction of blood samples is still transported to central laboratories. To migrate these assays to point-of-care settings, in-line access to blood plasma is required for developing user-friendly diagnostic devices. AcouSort's acoustic separation modules are designed to address this challenge by enabling automated, label-free, and closed sample preparation solutions suitable for point-of-care instruments.

MARKET

Diagnostic testing is undergoing a structural shift from centralized laboratories towards decentralized and point-of-care settings. This market trend is driven by the need for faster turnaround times, reduced laboratory burden and improved patient outcomes. As testing moves closer to the patient, the adoption of more advanced diagnostics outside traditional laboratory environments is increasing, which in turn is driving demand for robust and automated sample preparation solutions.

The global point-of-care testing (POCT) market was valued at USD 44.7 billion in 2025 and is expected to grow to approximately USD 82 billion by 2034, corresponding to a compound annual growth rate (CAGR) of around 7%[1].

1 https://www.gminsights.com/industry-analysis/point-of-care-testing-market

OFFERING

AcouSort collaborates with developers of point-of-care diagnostic systems to customize and integrate our OEM acoustic separation modules into novel or next-generation systems. The OEM modules are designed for incorporation into consumable or semi-consumable cartridges developed by our partners for use in their diagnostic instruments.

As more system providers integrate our separation modules into their diagnostic systems, AcouSort's business model offers strong scalability and recurring revenue potential, driven by OEM module sales linked to cartridge and instrument sales volumes.

FOCUS 2026

In 2026, AcouSort will continue to expand its presence within the diagnostic segment by engaging with diagnostic system developers through conferences and trade fairs as well as with evaluation and demonstration activities. In parallel, AcouSort will continue to strengthen its marketing and technical communication, with a particular focus on highlighting the value of AcouPlasmaOptical supporting the transition of advanced assays from central laboratories to point-of-care diagnostic formats.

Activities 2026

Quarter 1

- Participation in Analytica conference where our collaboration partner Moeller Medical exhibited their new prototype system containing AcouSort technology to enable in-line cell removal before sample analysis.
- Business trip to Korea to meet with Korean diagnostic instrument developers and present AcouSort's AcouPlasma and Acoustic separation solutions.

Quarter 2

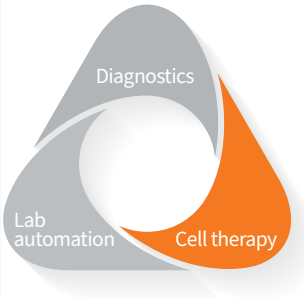

- First phase of evaluation with SeeQ finished with promising results.
- Demo travel to Boston area to meet with companies active in developing point-of-care diagnostic instruments.

Quarter 3

- Participated in WHX conference in Osaka, Japan, to meet with regional manufacturers of diagnostic devices.
- Continued commercial discussions with diagnostic OEMs and instrument developers regarding integration of AcouSort's acoustofluidic sample preparation technology into diagnostic workflows.

CELL THERAPY

Automated cell processing facilitates the cell therapy revolution

The world is facing a revolutionary increase in clinically approved cell therapies during the coming years. Unfortunately, the complex and expensive manufacturing process significantly limits the access to these treatments. All major life science instrumentation companies have active programs targeting automation of the cell therapy processing to manage production cost and quality. AcouSort's automated cell separation and processing technology is well positioned to provide a new mainstream solution for these novel cell therapies.

The number of clinically approved cell and gene therapies continues to grow rapidly, with a substantial pipeline of new candidates in development. However, cell therapies are associated with high treatment costs of up to USD 500,000 per patient, limiting broad adoption and putting significant pressure on healthcare systems. These high costs are largely driven by complex manufacturing processes that rely on sterile facilities and extensive manual handling during cell processing, resulting in low scalability and high production risks.

MARKET

The global cell therapy market size was valued between USD 7-9 billion in 2025 and is expected to expand at a compound annual growth rate (CAGR) of 20-23% from 2025 to 2030[1] [2] [3], thus exceeding USD 47 billion in 2035. The market is constantly growing to include new cell therapies, which presents a significant opportunity for companies to strengthen their market positions. As a result, during the past few years, there has been a dramatic increase in the number of companies engaged in the development of cell therapies.

OFFERING

AcouSort has been approached by a handful of multinational Life Science companies seeking solutions to enclose and automate the cell therapeutics processing and eliminate the current manual processing. Our separation modules are well suited for this as they can automatically perform the cell wash, cell up-concentrations and separation of target cell types needed.

AcouSort's strategy is to develop and supply the automated cell processing modules as single use OEM components to our Life Science instrumentation partners. In this way, the AcouSort business model is both scalable and represents a significant revenue potential.

FOCUS 2026

In 2026, AcouSort will continue to develop its cell separation modules in close collaboration with customers within cell therapy. Continued focus will be on technical development to further increase the sample throughput. We've made significant progress regarding the robustness and ease of integration for the high throughput solution that can be used across several different application areas. We will now develop evaluation test kits and focus on internal application development to further strengthen our offering to OEM customers within cell therapy, stem cell isolation, and flow cytometry applications.

1 Cell Therapy Market Size to Hit USD 47.72 Billion by 2034
2 Cell Therapy Market Size to Grow at 22.69% CAGR till 2035
3 Cell Therapy Market Size & Forecast [2035]

Activities 2026

Quarter 1

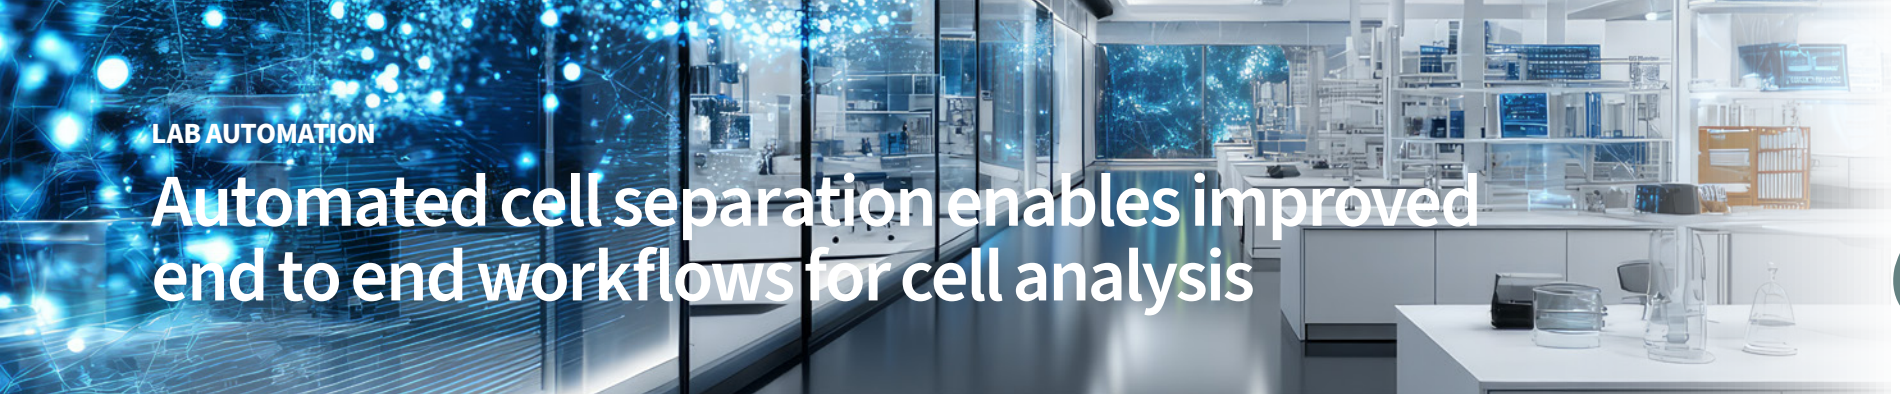

- Participated in Phacilitate Advanced Therapies Week in San Diego to network with key companies in the cell therapy field working on technologies for cell and gene therapy.
- Initiated collaboration with MFX. Collaboration was initiated by a 6-month rental of the AcouWash system to explore cell purification applications for cell therapy production.
- Continued work with increasing sample throughput to strengthen AcouSort's offering to customers in cell therapy segment.

Quarter 2

- Poster presentation at CYTO 2026 conference showing the benefits of using acoustofluidics to preserve cell health.

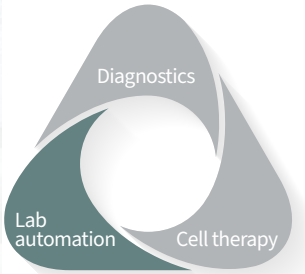

Quarter 3

- Continued engagement with cell therapy companies and technology partners to explore integration of acoustic separation into cell processing and manufacturing workflows.

LAB AUTOMATION

Automated cell separation enables improved end to end workflows for cell analysis

In academic research, pharmaceutical discovery and early development, there is an increasing demand for automated and standardized workflows for analysis and quality control of cell-containing samples. As analytical methods advance, the quality and purity of the input sample is critical to achieve reliable and reproducible results. AcouSort's technology addresses this need by enabling gentle, label-free and continuous cell separation, delivering highly pure cell populations that are directly compatible with automated analytical instruments.

The lab automation market is shifting from a strong focus on automated liquid handling toward automated end-to-end sample workflows, including preparation and purification of cell-containing samples prior to analysis and QC. Growth is driven by higher throughput demands, increasing analytical sensitivity, and the need for standardized, reproducible results with minimal operator dependence. Despite this shift, centrifugation and manual handling remain key bottlenecks to full automation.

MARKET

The global lab automation market is estimated at USD ~8–9 billion, growing at a mid-single to high-single digit CAGR[1]. Growth is driven by increasing sample volumes, labor shortages, and demand for standardized and reproducible workflows in life science research, diagnostics, and biopharma.

Within lab automation, automated handling of cells represents a fast-growing sub-segment, supported by the expansion of cell-based assays, cell and gene therapies, and biologics manufacturing. Automation of cell washing, separation, and culture is increasingly critical to improve reproducibility, scalability, and process robustness compared with manual, pipette-based methods.

OFFERING

By integrating AcouSort's OEM modules or research systems upstream of analysis or QC, laboratories can eliminate centrifugation and manual handling, enabling automated and scalable workflows. This reduces variability, increases throughput, and supports seamless integration into modern lab automation environments.

The value of automation is particularly high in applications reliant on consistent, high-quality input material, such as flow-cytometry analysis, imaging systems, and emerging cell-based assays. By delivering pure, well-defined cell populations, AcouSort helps customers maximize instrument performance, improve data quality, and increase the return on investment in advanced analytical infrastructure.

FOCUS 2026

Going forward, AcouSort will continue to prioritize technology development that supports automation, scalability and integration, strengthening the company's role as a technology provider enabling next-generation workflows for cell analysis and quality control in academic research and pharmaceutical discovery environments.

Activities 2026

Quarter 1

- Participation in SLAS conference to engage with potential customers designing and developing new solutions for automated laboratory workflows.
- Develop concept designs for integration of AcouSort separation module to lab automation workflows.
- Installation of AcouWash system at University of Wisconsin to use in project related to improved workflow for cell handling in radiolabelling assays.

Quarter 2

- Installation of AcouWash at US based veterinary medicine company.
- Demo travel to New York to meet with potential customers interested in separation technology for research applications.
- Conference participation at SLAS Europe 2026 and at CYTO 2026.

Quarter 3

- Conducted application development activities demonstrating acoustic-based dead cell removal and enrichment workflows, supporting improved sample quality for downstream analytical applications.

1 Lab Automation Market Size & Share | Industry Report, 2033

Industry collaborations

Collaborations with life science companies developing diagnostic systems, cell therapy production equipment and lab automation products represent a cornerstone of AcouSort's strategic transition from research-oriented activities towards OEM (Original Equipment Manufacturer) integration. These collaborations support the Company's long-term objective of embedding its proprietary acoustophoretic technology as integrated modules within third-party medical and laboratory equipment. Engagements typically commence with the leasing of AcouSort's benchtop systems, the sale of evaluation kits or the execution of limited-scope feasibility studies.

Where a strong technological and commercial fit is established, such initial activities may progress into long-term strategic partnerships and formal product development programs. The timing of early collaboration phases is inherently difficult to predict, as progress depends on customer priorities, application requirements and internal development resources. Once a collaboration enters formal product development, timelines become more predictable, although they vary by segment. For diagnostic devices, development cycles are typically in the range of approximately three to five years. For cell therapy-related systems, time to market is generally estimated at one to three years, while lab automation products are often characterized by shorter development cycles of approximately one to two years.

Status: CT1 confirmed interest for continuing the collaboration when volume throughput specifications are met, LA3 discontinued due to lack of funding, CT3 & LA4 paused due to focus on other priorities, LA6 discontinued due to updated material specifications not compatible with acoustofluidics. CT6 & DX6 represent two new strong partnerships.

Partner	Description	Concept study	Feasibility testing	Early product development	Formal product development	Validation / beta testing	Product launch
DX1	*Werfen* (Instrumentation Laboratory) License agreement. Press released on June 8, 2018.						2024
CT1	Global life science company active in the cell therapy field. Press released on Nov 14, 2022.						
LA2	*GenSensor.* Press released on April 29, 2024. (Previously QC1)						
CT3	US based cell therapy company. Press released on July 29, 2024.						
LA4	Leading global pharma company evaluating AcouWash for quality control in an R&D setting. Press released on October 23, 2024. (Previously QC2)						
DX2	*Moeller Medical.* Develops diagnostic device containing AcouSort technology. Press released on May 21, 2025.						
LA5	Leading flow cytometry instrument manufacturer. Press released on August 5, 2024. (Previously FC3)						
CT4	*Bio-ReCell.* Press released on March 3, 2025.						
DX4	*SeeQ Diagnostics.* Press released on November 19, 2025.						
CT5	*MFX.* Press released on December 19, 2025.						
LA6	Large international manufacturing company. Press released on January 23, 2026.						
DX5	Large international company within animal diagnostics. Press released on June 3, 2026.						
CT6	*Calyrex Biosystems Inc.* Press released October 1, 2026.						
DX6	*Edif Instruments.* Press released November 17, 2026.

AcouSort's research collaborations

To stay at the forefront, AcouSort is continuously developing the acoustofluidic technology further together with universities and commercial partners.

AcouSort was originally spun out from Lund University, Department of Biomedical Engineering (BME) based on research led by Professor Thomas Laurell. Today, more than 20 scientists at BME are active within acoustofluidics representing the largest concentration of acoustofluidics research in the world.

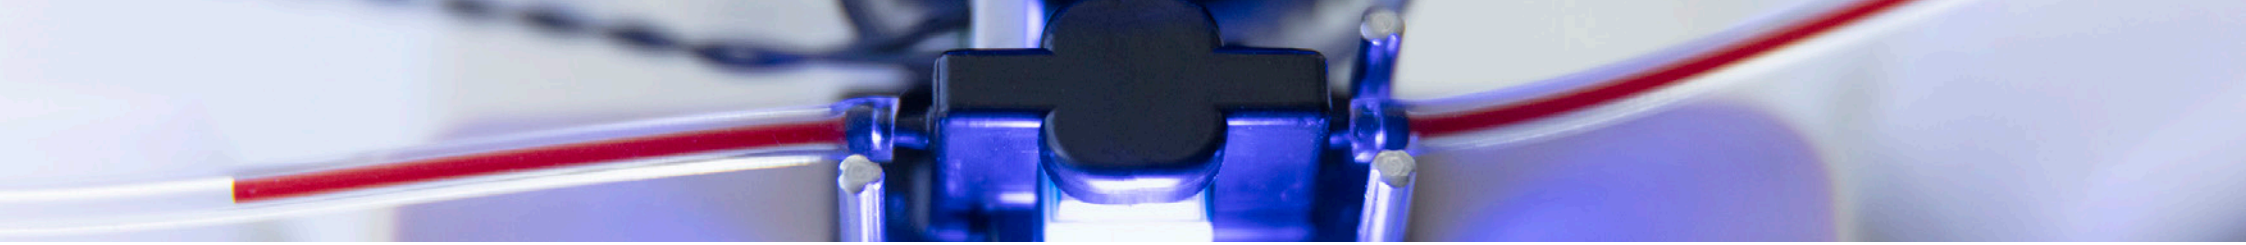

AcouSort has very close collaborations with several of the Principal Investigators at BME and also IP agreements in place securing access to relevant innovations developed.

Over the past years, AcouSort has in addition collaborated with a number of international industrial and academic groups in order to further support our ambition to maintain our leadership as the most advanced commercial and technical player within acoustofluidics. These collaborations addressed advanced bead-mediated acoustofluidics separation of stem cells, automated exosome isolation as well as next generation devices replacing current glass-based devices with plastic.

The table below presents the most current research collaborations.

Project	Sponsor	Goal	Partners	Duration	Status	AcouSort grant	Total project grant
AcouSome	European Innovation Council	Development of a miniaturized microfluidic module for exosome isolation directly from blood using ultrasound generated by thin films, to be used in research and diagnostics.	Lund University, DTU, DayOne	2023-2025	Completed December 2025	EUR 1,100,000	EUR 2,500,000
IndiCell	Vinnova	Development of a world leading innovation milieu for individualized induced pluripotent stem cell derived therapies, to lower the risks and overcome hurdles for the translation from basic science to innovations and further to clinical applications.	Lund University, Karolinska Institute, KTH, Lab-On-A-Bead AB, Skåne University Hospital, BioLamina AB, Karolinska University Hospital	2021-2026	Completed September 2026	EUR 110,000	EUR 3,520,000*

*Currency conversion from SEK, i.e. the total project grant in EUR is approximate.

AcouSort's products

OEM COMPONENTS

AcouSort's core strategy is to develop and commercialize Original Equipment Manufacturer (OEM) components for automated sample preparation and processing. These solutions enable the integration of AcouSort's acoustophoretic technology into analytical, diagnostic and therapeutic systems, supporting automated and standardized workflows. The primary customers for OEM components are instrument manufacturers within the life science industry.

The Company aims to expand its OEM portfolio to address a broad range of applications within clinical analysis and biological sample handling. The acoustic separation components are expected to play an important role in the development of next-generation scientific and diagnostic devices, where rapid and automated access to clean cell and blood fractions is required. Similar needs are also seen in therapeutic sample processing systems, including applications related to cancer and stem cell therapies.

Evaluation Kits

To support customer evaluation and integration activities, AcouSort offers evaluation kits to partners interested in exploring the capabilities of the company's acoustofluidic technology and assessing its suitability for integration into their own systems. The kits provide hands-on access to AcouSort's core OEM modules, including the Separation Modules, Trapping Module and AcouPlasmaOptical Module, enabling customers to evaluate performance in relevant application environments.

The evaluation kits are designed to support early-stage development activities, allowing partners to prototype automated sample preparation workflows and assess compatibility with existing analytical, diagnostic or processing platforms. By lowering the threshold for technical evaluation, the kits facilitate structured collaboration and serve as an important step in progressing discussions towards formal OEM development projects.

AcouPlasmaOptical – integrated separation of biofluids

AcouPlasmaOptical is an OEM component designed for integration into diagnostic and analytical instruments as a semi-consumable. It enables automated and rapid analysis of particle-free media in point-of-care diagnostic devices and monitoring systems. The technology uses gentle acoustic forces in combination with microfluidics to create a particle-free window for optical access in samples without the need for prior centrifugation. Centrifugation often requires manual intervention that may have negative effects on sample quality, making AcouPlasmaOptical a competitive alternative.

Custom made solutions for interfacing of sample flow and electronic connection are available. Design, development and manufacturing of AcouPlasmaOptical is ISO13485 certified.

RESEARCH AND INNOVATION SYSTEMS

AcouSort offers two benchtop research systems that provide customers with hands-on access to the Company's core acoustofluidic techniques, i.e., separation and trapping techniques. Serving as research and innovation platforms, the instruments provide easy access to the technology for instrument manufacturers interested in integrating acoustofluidic OEM components into their systems. With user-friendly hardware and software, the instruments enable automated handling of biological samples, supporting academic researchers and product development teams working with new biomarker identification and diagnostic assay development.

AcouWash – automated cell separation

AcouWash is a benchtop research instrument for label-free separation of target cells from a variety of biological samples. The system provides automated processing and is designed to perform sensitive separations and handle fragile cells without any impact on viability. The acoustic forces used in the AcouWash provides samples with very high quality and with minimal sample-to-sample variation.

With the AcouWash system, a variety of applications aimed at separation of blood cells can be automated. Common applications comprise gentle and highly efficient cell wash, label-free separation of mononuclear cells and platelets from blood, and rare cell isolation (e.g., bead mediated separations) for research and product development applications.

AcouTrap – sample enrichment and preparation

AcouTrap is a benchtop research instrument for automated enrichment, washing and labelling of cells and nanoparticles in biological samples. The system enables gentle handling of cells and other biological particles and is primarily used in research and development environments where high recovery and preservation of sample integrity are critical.

AcouTrap supports a range of sample preparation workflows and is used by customers to explore applications and perform feasibility studies and where the system is particularly well suited for research studies with small volume samples for example biobank samples only provided in minute fluid volumes.

Cash flow and investments

The parent company's cash flow for the third quarter was TSEK -3,220 (-4,852). Investments amounted to TSEK -489 (-22), of which TSEK -306 (-76) pertained to intangible assets and TSEK -183 (53) to financial assets.

Other information

THE SHARE

AcouSort's share was listed on Spotlight Stock Market January 9th, 2017. In December 2020 the share changed list to Nasdaq First North Growth Market, with December 14th as the first trading day. The ticker symbol of the share is "ACOU", and the ISIN-code is SE0009189608. First North Growth Market is an alternative marketplace run by NASDAQ Stockholm AB. Companies traded on First North Growth Market do not have to be compliant to the same rules as companies traded on a regulated market. Instead, the companies are subject to less strict rules applied for growth companies. The risk of investing in a company traded on First North Growth Market may thus be greater than investing in a company traded on a regulated market. All companies with shares traded on First North Growth Market have a Certified Adviser that supervises the compliance of the rules. The stock exchange examines applications to be listed on the exchange. AcouSort's Certified Adviser on Nasdaq First North Growth Market is Tapper Partners AB. As of September 30, 2026, the number of shares in AcouSort AB was 21,163,902 (21,163,902). The Company has one class of shares. Each share carries one (1) vote per share and carries equal rights to share in the Company's assets and earnings.

THE SUBSIDIARY ACOUSORT INC

AcouSort AB has a wholly owned subsidiary in the USA, AcouSort Inc. The Company's task is to carry out marketing and sales on the North American market.

BUSINESS-RELATED RISKS AND UNCERTAINTIES

In summary, the risks and uncertainties that AcouSort's operations are exposed to are related to, among other things, competition, technology development, market conditions, capital needs, currencies and interest rates. No significant changes in risk or uncertainty factors occurred during the current period. For more detailed reporting of risks and uncertainties, please refer to the Annual Report.

The group makes continuous simulations regarding expected liquidity development for the coming twelve-month period. These simulations are based on the current order backlog, planned investments as well as operational costs. The Group's simulations show that the Group has sufficient liquidity into early 2028.

In a scenario where the Group would not succeed in achieving the budgeted sales revenues, there is a potential risk the Group may experience liquidity problems. This means that liquidity development constitutes an uncertainty factor regarding the Group's continued operations. It is the Group's current assessment that such a situation can be handled without a new rights issue being carried out.
