Freemelt receives order for Freemelt ONE from the Swedish defense industry

Freemelt has received an order from a customer within the Swedish defense industry for the research machine Freemelt ONE. The machine will be used in materials research and development related to defense applications. The order value amounts to approximately SEK 4,2 M, with expected delivery in Q2 2025.

The customer conducts research across multiple domains to enhance security and readiness. The defense industry is under significant pressure to scale up production, modernize capabilities, and reduce reliance on subcontractors for components of critical systems. Warfare is evolving rapidly with advanced technologies, requiring new types of materials with improved performance. This order further strengthens Freemelt's position within the defense industry.

"The geopolitical landscape is rapidly changing, driving an urgent need for new materials, technologies, and advanced manufacturing methods to support the modernization and strengthening of Europe's defense capabilities. Additive manufacturing (3D printing) can play a critical role in this transformation, and we are experiencing growing interest and demand in our technology from the defense sector," says Daniel Gidlund, CEO of Freemelt.

About Us

Freemelt develops advanced 3D printers for metal components and aims to become the leading supplier in additive manufacturing (AM) using E-PBF technology, targeting SEK 1 billion in revenue by 2030. The solutions primarily support companies in the defense, energy, and medical technology sectors in Europe and the USA, enabling them to drive innovation and improve production efficiency. Founded in 2017, Freemelt has expanded its product portfolio to include three printer models, with two designed for industrial production and one (Freemelt ONE) targeting research institutes and universities. The modular industrial printers (eMELT) leverage E-PBF technology, delivering significantly higher efficiency compared to other machines on the market while maintaining flexibility in metal selection.
Freemelt generates revenue primarily through the sale of advanced 3D printers at fixed prices, complemented by support and maintenance services, which are expected to account for 25% of total revenue by 2030.
The company is now focused on further industrializing its product and service portfolio and driving commercialization in the European and North American markets. Read more at www.freemelt.com
