

DONE.AI GROUP AB INTEGRATES MANUFACTURING AND PRODUCTION PLANNING INTO DONE OS, ACCELERATING ITS PLATFORM INTO THE MANUFACTURING SOFTWARE MARKET

Done.ai Group AB (“Done.ai”) today announces the full integration of Done MRP into Done OS, marking another milestone in the company’s strategy to build an AI-powered operating system for businesses across industry verticals.

Done MRP is a fully owned cloud-based production management system (Material Requirements Planning) used by manufacturing and logistics companies to manage procurement, production planning, and inventory. The solution is already deployed across an international customer base, including manufacturing companies in industries such as aerospace and defense, electronics manufacturing, medical equipment, and food and beverages in the United States, Canada, Sweden, and Norway.

With Done MRP integrated into Done OS, Done.ai is positioning itself to capture share in this growing market by offering a modern, cloud-native and AI-enabled alternative to legacy systems.

MRP customers are rich in product data and inventory, benefiting from Done.ai’s integrated intelligence layer and financing solutions.

Scaling through platform and cross-sell

Done MRP has demonstrated strong growth reaching annual recurring revenue (ARR) of ca. SEK 10m in 2025, with continued customer growth in 2026. A few customer examples in the Nordics are Oskar Pedersen, Giltor, Fj Klima and Norwegian Fishfarming Technologies. With the solution now integrated into Done OS, Done.ai can accelerate growth into its existing customer base and through cross-selling of CRM, accounting, and marketing solutions to the Done MRP customer base.

This creates a scalable platform model where each new product increases overall revenue per customer and strengthens platform retention.

From production software to intelligent execution layer

The integration transforms Done MRP from a standalone production system into part of a broader AI-powered platform, where production data, financial data, and customer data are unified in a single operating layer.

PRESS RELEASE

17 April 2026 14:50:00 CEST

Over time, Done.ai will introduce AI-powered functionality into the Done MRP solution, enabling automated planning, real-time optimization, and improved resource utilization. The long-term vision is to move from static production systems to dynamic and better optimizing workflows powered by AI.

“Integrating Done MRP into Done OS is the first step of building an AI-powered execution layer for industrial businesses, where production, finance, and operations are continuously optimized through data and intelligent automation,” says CEO Staffan Herbst and highlights that the integration is a key step in scaling this vision across Done.ai’s product verticals.

About Done.ai

Small businesses run on too many systems. Done.ai is built to fix that.

Done.ai is building the unified operating system for Nordic small and medium-sized enterprises. Through the Done Operating System, Done OS, the company aims to bring together business software, operations and embedded financial services into a single, AI-driven platform that covers the full operational workflow from first customer contact to final accounting entry.

The Done OS is structured across three integrated layers. (1) Business Tools covers everything a modern SME needs to run its operations: platform intelligence, CRM and customer growth, operations and delivery and people management. (2) Financial Services sits natively alongside, offering payment management, credit management, and cash management including corporate card and spend. (3) Operational services including accounting and marketing extend the platform into execution, ensuring that data-driven insights are translated into compliant financials and scalable customer growth and relationships within the same ecosystem.

The result is a platform where every workflow, every transaction and every business decision connects.

Done.ai reaches the Nordic SME market through two complementary channels: its own customer base and an exclusive distribution agreement with Finago, one of the leading ERP software providers in the Nordics.

The company is headquartered in Sweden and listed on Nasdaq First North Growth Market under the ticker DONE.
