

Dr. Gopalakrishnan and Lumito's poster receives third place at R&D Summit: Institutes for Excellence Launch at UHCW NHS Trust

Friday September 15th, Lumito was awarded third place in a poster competition during the R&D Summit at the UHCW NHS Trust. The poster, entitled "Utility of Upconversion Nanoparticles (UCNP) Based Immunohistochemistry in Diagnostic Renal Biopsies - A Proof of Concept Study", is the poster presented in June at the Liverpool Pathology 2023 congress by Dr. Kishore Gopalakrishnan.

"It is gratifying to see that our collaboration with Dr. Kishore Gopalakrishnan's research group at UHCW NHS Trust is acknowledged. Using Lumito's technology, we have seen good results in renal tissue analysis. We look forward to what this leads to and further future applications of our product," comments Mattias Lundin, CEO at Lumito.

The R&D Summit: Institutes for Excellence Launch is a prominent networking event organised annually by NHS University Hospitals Coventry and Warwickshire for its R&D department.

Lumito

Lumito specialises in medical technology for digital pathology. Through its proprietary and patented technology, Lumito aims to provide healthcare providers with a powerful tool to meet the demands for fast and safe tissue diagnostics in personalised healthcare. The technology enables higher-contrast images without irrelevant background information, making it easier for pathologists to find cancer indications. The technology, based on Up Converting NanoParticles (UCNP), has the potential to significantly improve the diagnosis of tissue samples through higher quality analyses and shortened analysis times. The method has several potential applications, but Lumito has focused primarily on digital pathology and first on a release of SCIZYS by Lumito for use in research laboratories. The company is a spin-off of a research group at the Department of Atomic Physics and Laser Centre. www.lumito.se/en

The share is traded on NGM Nordic SME under the name LUMITO, and Mentor is Mangold Fondkommission.
