Enersize receives new call-off for service and maintenance of LSP steam equipment from global industrial company

Enersize has received a new call-off order from a global industrial company operating in the process industry. The assignment covers service and maintenance of Low Steam Pressure (LSP) equipment and represents a continuation of previously completed work at the same production site.

This is the second call-off in 2025 and includes continued efforts to optimize energy use in both steam and compressed air systems. The aim is to ensure operational reliability, prevent energy losses, and reduce the environmental footprint of the production process.

"This call-off confirms that our solutions deliver long-term value and that our customers recognize the benefits of continuous monitoring and service. It also strengthens our position in energy efficiency for additional utilities beyond compressed air, where steam is a growing area of application," says Fredrik Arrigucci, CEO of Enersize.

The assignment will be carried out during October 2025 and is part of Enersize's strategy to provide integrated solutions for industrial energy optimization.

About Enersize

Enersize develops and provides specialized software, tools, and services for improving energy efficiency in industrial compressed air systems – one of the most energy-intensive processes in manufacturing. The company's technology platform enables detailed monitoring, analysis, and real-time optimization of compressed air systems, with the aim of reducing energy consumption, detecting leaks, and improving operational performance.

Enersize works with a wide range of industrial companies that recognize energy efficiency as a strategic priority – both for improving financial performance and for reducing environmental impact. The solutions are scalable and designed to integrate seamlessly into both existing and new system environments.
The company is listed on Nasdaq Stockholm First North Growth Market under the ticker: ENERS.
