

## Obducat signs three-year Foundry Service Agreement worth at least SEK 115 million

**OBDUCAT has signed a new three-year agreement with an existing European customer focused on Photonics, with deliveries directed at the defense industry. The agreement concerns continuous manufacturing and delivery of optical components. The contracted value amounts to at least SEK 115 million and constitutes a so-called minimum commitment over the contract period.**

The agreement replaces a previous three-year contract signed in 2023, which then amounted to approximately SEK 30 million. The new agreement thus entails a significant increase in both volume and value.

Obducat will manufacture the components using the company's proprietary NIL technology (Nanoimprint Lithography). The increased volumes are expected to contribute to increased efficiency and economies of scale in production, which in turn strengthens the business's profitability over time.

As part of the collaboration, Obducat will also take over parts of the Supply Chain Management from the customer for materials used in production.

The capacity of the current Foundry Service business is sufficient to meet the increased volumes initially. To support the continued scale-up following the agreement as well as to meet the generally increasing demand for contract manufacturing, the company is working to secure the conditions for carrying out the planned expansion of its Foundry operations in Portugal, with the support of the Portuguese authority IAPMEI. Through this expansion, Obducat contributes to accelerating the industrialization of NIL, while further economies of scale can be realized.

"This agreement is a clear acknowledgement of the long-term trust we have built up with the customer. The fact that the contract value now increases significantly strengthens our Foundry business and is an important step in the continued scaling up and industrialization of our NIL technology," says Patrik Lundström, CEO of Obducat.

### **About Obducat AB (publ)**

Obducat AB (publ) is an innovative developer and supplier of technologies, products and processes used for the production and replication of advanced micro and nano structures. Obducat's products and services serve the demands of customers worldwide within the LED and Display, Optics and Photonics, MEMS and Sensor industries as well as in High Power and High Frequency electronics and Biomedical Devices. Obducat's technologies include nano imprint technology, resist- and wet processing technologies. Obducat has its own market presence in Sweden, Germany, Japan, USA, England, Portugal and China and the headquarter is located in Lund, Sweden. Obducat is a public company. The Obducat share is traded on the Swedish NGM Main Regulated Equity exchange.
