

Freemelt expands into China with first order from Jiuli

Freemelt has received an order for the industrial machine, eMELT, from Jiuli. The order is strategically important, marking the company's first industrial machine delivery to the Chinese market, to demonstrate Freemelt's metal AM technology. The order value is approximately SEK 5 million with expected delivery in the first quarter of 2026.

The eMELT-iD machine, ordered at a discounted price, represents an important step in strengthening the collaboration with the industrial company, Jiuli, and addressing the Chinese market, with initial focus on energy and MedTech applications. In May 2025, Freemelt entered into a strategic agreement with Jiuli, providing the company with local presence, technical expertise, and established business relationships.

The Chinese market for metal AM (Additive manufacturing) is developing rapidly and is projected to grow at a CAGR (Compound Annual Growth Rate) of 21% between 2024 and 2030¹. Driven by increased investments in research and development, China has already entered industrial serial production across several sectors, including energy and MedTech. In 2023, China accounted for 11.9%¹ of the global market for metal AM and is expected to become the world's largest single market.

"We are pleased that our collaboration with Jiuli has already led to a machine order. This installation enables us to demonstrate the capabilities of our advanced E-PBF (Electron Beam Powder Bed Fusion) technology and strengthens our presence in one of the world's fastest-growing metal AM markets," says Daniel Gidlund, CEO of Freemelt AB.

About Us

Freemelt develops advanced 3D printers for metal components and aims to become the leading supplier in additive manufacturing (AM) using E-PBF technology, targeting SEK 1 billion in revenue by 2030. The solutions primarily support companies in the defense, energy, and medical technology sectors in Europe and the USA, enabling them to drive innovation and improve production efficiency. Founded in 2017, Freemelt has expanded its product portfolio to include three printer models, with two designed for industrial production and one (Freemelt ONE) targeting research institutes and universities. The modular industrial printers (eMELT) leverage E-PBF technology, delivering significantly higher efficiency compared to other machines on the market while maintaining flexibility in metal selection.

Freemelt generates revenue primarily through the sale of advanced 3D printers at fixed prices, complemented by support and maintenance services, which are expected to account for 25% of total revenue by 2030.

The company is now focused on further industrializing its product and service portfolio and driving commercialization in the European and North American markets. Read more at www.freemelt.com
