

Clavister Extends Contract to Secure Three UK Mobile Network

2nd August 2023 – Örnköldsvik, Sweden – Clavister, a leader in European cybersecurity for mission-critical applications, today announced a new agreement with Nokia for Three UK, one of UK’s largest mobile operators and Clavister’s largest 5G security deployment to date.

The new agreement will see Three UK evolving their 5G cybersecurity posture in tight collaboration with Clavister and Nokia. In the initial phase, through a substantial order placed with Clavister at the end of the second quarter, Three UK commissions Clavister professional service experts to conduct a network-wide upgrade to the latest version of Clavister NetShield, Clavister’s carrier-grade, high-performance network firewall for mobile networks.

As the upgrade progresses, Clavister will benefit from subsequent software license orders, in the process also transitioning the business with Three UK to a scalable subscription model.

As mobile operators continue to evolve their 5G plans, the expanding threat landscape and increasing sophistication of attacks requires an end-to-end, well integrated network security. In the UK, broadband and mobile companies are facing stricter security rules following new [regulations](#) developed by National Cyber Security Centre (NCSC) and Ofcom. Customers are looking for network security solutions that are designed for cloud environments and enable rapid scalability in a cost-efficient manner.

Clavister and Nokia has been long-term partner for Three UK, bringing their combined expertise to tackle 5G specificities in the cyber security domain. Through Nokia’s Managed Security Services (MSS), Three UK will be able to take further advantage of Clavister’s technology to scale-up to their specific needs as well as Nokia’s highly experienced operational teams.

John Vestberg, Clavister CEO commented, “We are very happy to announce this new agreement in the telecoms space because it’s a testament of our feature-rich and high-performance 5G security solution that is providing comprehensive cyber protection for Three’s hybrid network systems. We are also very proud to work with Nokia Managed Security Services in this, to protect global operators from today’s threat landscape. In Clavister and NetShield, they have got the flexibility they would need in the future.”

About Clavister

Clavister is a specialised European cybersecurity company, protecting complex digital businesses for more than two decades. Founded and headquartered in Örnköldsvik, Sweden, Clavister pioneered one of the first firewalls and continues to build robust and adaptive cybersecurity solutions since. Empowering a growing ecosystem of partners and resellers, we have been serving customers in more than 100 countries with 125,000+ deployments across public sector, service provider and defence sectors. Network, cloud, mobile, end points - we secure them all.

The stock, Clavister Holding AB, is listed at Nasdaq First North Growth Market. FNCA Sweden AB is the Company's Certified Advisor.
