

ReFuels Opens the First Bio-CNG Refuelling Station in Southeast England

23 May 2024 - ReFuels N.V., one of Europe's leading suppliers of renewable biomethane (Bio-CNG) for the decarbonisation of heavy goods vehicles, has opened a new refuelling station at Aylesford in Kent under the CNG Fuels brand. As the first public access Bio-CNG station in Southeast England, it will support low-emission transport in a region with a population of more than 9 million.

Serving major UK haulage routes, including the M20 and M2, the Aylesford station is located on land acquired from the John Lewis Partnership adjacent to Waitrose's southeast distribution centre. It will enable the retail giant to continue to expand its fleet of biomethane-powered heavy goods vehicles (HGVs), already the largest in the UK.

"ReFuels is committed to making a low-carbon fuel available for fleet operators looking to decarbonise their long-haul operations. Southeast England is densely populated and hosts numerous industrial and commercial centres. Its proximity to mainland Europe via the English Channel makes it a gateway for trade between the UK and the EU, strategically located for both domestic and international trade", said Philip Fjeld, CEO of ReFuels.

The new Aylesford station has 12 fuel pump islands, allowing more than 700 trucks to be refuelled per day with a total capacity of more than 19 million kilograms (kg) of Bio-CNG annually. It is owned by a joint venture (JV) with Foresight Group.

The current CNG Fuels network in the UK can refuel more than 9,500 HGVs daily. This equals an annual dispensing capacity of more than 290 million kg of biomethane annually and a potential saving of more than 800,000 tonnes of CO₂ emissions annually when compared to diesel.

ReFuels has one more station under construction in Doncaster in South Yorkshire which is one of the UK's largest logistics hubs.

About ReFuels

ReFuels is decarbonizing Europe's truck fleet by developing, owning, and operating green station infrastructure. We are rolling out a network of reliable and convenient stations offering renewable biomethane fuels to heavy goods vehicles, with hydrogen and electricity to be added. By end-2026 the target is to have 30-40 stations across the UK, while the long-term ambition is to become Europe's leading integrated supplier of alternative fuels for commercial fleets.
