

Insplorion receives three new orders with a total order value of 180 KSEK

Insplorion is pleased to announce that it has received three orders for the hydrogen sensor NPS-P2, with a total order value of approximately 180 KSEK. The three different customers all have the need to quickly and accurately measure hydrogen levels, a need that Insplorion is happy to fulfill with its solution.

In a short period of time Insplorion has secured orders from three independent customers. Two of the customers operate in the field of hydrogen combustion, and one operates in the application of hydrogen production through electrolysis. Prototypes of the NPS-P2 sensors will be delivered in the fall of 2024, and delivery will occur before Insplorion has completed the ongoing ATEX certification of the sensor. The team at Insplorion is focused on ensuring the successful delivery of sensors that meet customer requirements and expectations.

"We are excited to see that the market shows great interest in our hydrogen sensors and that we can start delivering prototypes to new customers already now. Receiving orders for the NPS-P2 even before the ATEX certification is in place is a very positive sign of both market demand and customer confidence in our solution", says Johan Rask, CEO of Insplorion.

About Insplorion

Insplorion's vision is to use sensor technology for an accelerated transition to a sustainable future. With its unique sensor platform NanoPlasmonic Sensing (NPS), Insplorion operates within two fields; hydrogen sensors and research instruments. The hydrogen sensors enable safe and efficient deployment of hydrogen infrastructure through its unique benefits in detection speed, selectivity and ability to function in environments where many sensor technologies cannot. Our instruments give scientists around the world real time data within battery research and surface processes in fields like catalysis, material- and life science. Redeye AB is Insplorion's Certified Adviser on Nasdaq First North Growth Market.
