Enea signs USD 2.5 million agreement extension with global cloud leader

Enea has extended an agreement with a global cloud-based cybersecurity and networking provider for an additional two years.

Under the renewed agreement, Enea will deliver embedded application and traffic classification software valued at USD 2.5 million over the period 2026–2027. This partnership will enable the global U.S.-based cybersecurity and networking company to enhance application performance, strengthen security, and reduce costs for its customers.

The agreement builds upon Enea’s long-standing relationship with an existing customer utilizing Qosmos ixEngine, Enea’s advanced embedded Deep Packet Inspection (DPI) engine. The customer will use Qosmos ixEngine in both its firewall and SD-WAN solutions, enabling real-time traffic intelligence for enhanced security, WAN optimization, and quality of service.

“This agreement strengthens a long-standing relationship and reinforces Enea’s role in enabling real-time traffic intelligence for secure and optimized networking”, says Jean-Pierre Coury, SVP Embedded Security Business Group in Enea.
