Better and cheaper medicines to a larger number of patients

Nanologica offers products and services that enable pharmaceutical manufacturers to streamline their workflows and lower their production costs.

In doing so, we aim to both create value for our shareholders and to help more patients around the world have access to adequate treatments for diabetes and obesity, for example, at an affordable price.

ABOUT NANOLOGICA

Nanologica is a Swedish life science tools company that develops, manufactures and sells advanced consumables to pharmaceutical manufacturing companies.

With a foundation in materials science and nanotechnology, we have developed an expertise in chromatography, a technique for separating components in a mixture. This expertise combined with our high-quality products allows us to streamline our customers' workflows and lower their costs. Nanologica's products are used to purify pharmaceuticals during production through a technique called preparative chromatography.

Our main product NLAB Saga®, which is a silica-based purification media for preparative chromatography, is specially developed for the purification of peptide drugs such as insulin and GLP-1 analogues (e.g. *Ozempic*® and *Wegovy*®). A proprietary production method allows us to precisely control the shape, size, porosity, and surface properties of silica particles, giving us the opportunity to create first-class products. Due to effective purification and a long lifetime, NLAB Saga® can increase productivity and reduce costs for pharmaceutical manufacturers.

Nanologica operates in a global niche market that is growing as a result of increased demand for peptide drugs for the treatment of diabetes and

obesity. Our mission is to increase access to cost-effective medicines through our purification products and thereby contribute to more patients around the world having access to life-saving treatments.

At the head office in Södertälje, Sweden, there is development of new products, customer support in the form of application support and method development, as well as small-scale production of silica. For large-scale production, the company works together with partners. Large-scale production of silica takes place at a manufacturer in the UK and Ireland in factories with multiton-scale capacity.

Nanologica's goal is to establish a growing, sustainable and profitable business in preparative chromatography in a global market. The company's share (NICA) has been listed on Nasdaq Stockholm's main market since 2022.

From 2026, the Group also includes Syntagon, a contract manufacturer of active pharmaceutical ingredients for both clinical studies and commercial delivery. Syntagon works with manufacturing and development of processes and analyses of pharmaceutical raw materials, with a core competence in small molecules and peptides, and a particular strength in purification and analysis of complex compounds.

Nanologica's main product, NLAB Saga®, consists of spherical silica particles in micrometer size. Silica is visible to the naked eye as a fine white powder. In scanning electron microscopes, individual particles can be seen, as well as the nanometer-sized pores of the particles. Silica acts as a purification media in the manufacture of peptide drugs such as insulin and GLP-1 analogues.

2025 IN NUMBERS

- Net sales amounted to SEK 21,127 thousand (14,538), an increase of 43 percent compared to the previous year.
- Operating loss amounted to SEK -46,801 thousand (-59,255).
- Profit after tax amounted to SEK -51,289 thousand (-65,629).
- Earnings per share before and after dilution were SEK -0.58 (-1.32).
- Cash and cash equivalents at the end of the year amounted to SEK 3,549 thousand (48,430).
- The number of permanent employees at the end of the year was 19 (15). The number of consultants and project employees amounted to the equivalent of 1 full-time position (3.5).
- The share price at the end of the year amounted to SEK 0.78 (1.82). The number of shareholders as of December 31, 2025 was 2,821 (2,511).

| Key figures for the group (TSEK if nothing else is stated) | 2025 | 2024 |
|------------------------------------------------------------------|------------|------------|
| Net sales | 21 127 | 14 538 |
| Operating profit/loss* | -46 801 | -59 255 |
| Profit/loss before income tax | -51 289 | -65 629 |
| Cash flow from operating activities | -39 832 | -80 734 |
| Cash and cash equivalents at the end of the year | 3 549 | 48 430 |
| Equity at the end of the year | 22 645 | 74 112 |
| Balansomslutning | 88 111 | 143 099 |
| Average number of shares during the year | 88 369 820 | 49 533 602 |
| Number of shares at the end of the year | 88 369 820 | 88 357 234 |
| Earnings per share (before and after dilution), SEK ¹ | -0,58 | -1,32 |
| Equity per share, SEK ^{1*} | 0,26 | 0,84 |
| Equity/assets ratio, %* | 26 | 52 |
| Average number of employees, translated into FTEs | 17 | 15 |
| Number of employees at the end of the year, translated into FTEs | 19 | 15 |

* Alternative performance measures are defined in note 34.

¹ As the group reports a negative result, the number of shares is not adjusted with dilution for issued warrants. For more information, see the consolidated equity report.

SIGNIFICANT EVENTS 2025

Q1

- In January, the fifth order from a returning customer in China for NLAB Saga® was received, at a value of appx. SEK 8.5 million. Since June 2024, the customer has placed orders for NLAB Saga® with a total value of appx. SEK 18 million.
- The end date of the loan from Flerie Invest AB was extended to 2 July 2027 from 5 July 2025.

Q2

- In April, an order was received for NLAB Saga® from a new customer in China, with a value of appx. SEK 1.7 million. The customer is a large pharmaceutical manufacturer and the order relates to the evaluation of NLAB Saga® in the production of GLP-1 analogues.
- In April, Nanologica's main owner, Flerie Invest AB, acquired additional shares in Nanologica, which triggered a mandatory bid obligation. In May, Flerie Invest made a mandatory bid of SEK 1.00 per share. Flerie Invest expressed that the increase in ownership in Nanologica was not motivated by any ambition to acquire all shares in the company. The board of directors of Nanologica unanimously recommended the company's shareholders not to accept the offer. The acceptance period for the offer expired on 15 July and a total of 293,815 shares were tendered, corresponding to appx. 0.33 per cent of the number of shares and votes in the company. Flerie Invest AB subsequently held a total of 38,516,594 shares in Nanologica, corresponding to appx. 43.59 percent of the shares and votes in the company.
- In June, an order was received for NLAB Saga® from a new customer in the US, at a value of appx. SEK 1.3 million. This is Nanologica's first order in the North American market for evaluation of the company's silica on a production scale.

Q3

- New equipment was commissioned in one process step in the production of silica, which resulted in increased yield and faster production in this process step.

Q4

- In October, Nanologica received an order of appx. SEK 2 million from a Chinese pharmaceutical manufacturer for the evaluation of the company's silica-based purification media NLAB Saga® in the production of insulin. The order was delivered during the fourth quarter.
- In October, a supplementary order was received from a customer in the US for evaluation of NLAB Saga® on a production scale. The order value amounted to appx. SEK 2.7 million.
- In October, an order was also received for NLAB Saga® worth appx. SEK 1 million from a new distribution partner in China. The order relates to sampling of NLAB Saga® to pharmaceutical manufacturers in order to reach more customers faster.
- In November, an order was received for a non-silica-based purification media from a customer in Asia. The order value amounts to appx. SEK 1.5 million. The product is part of Nanologica's development program for additional applications.

EVENTS AFTER THE END OF THE YEAR

- Nanologica acquired the Södertälje-based contract manufacturer Ardena Södertälje AB. The purchase price amounted to appx. SEK 8.6 million and was paid in the form of newly issued shares in Nanologica. The acquired company will be operated as an independent wholly-owned subsidiary within the Nanologica Group under the name Syntagon AB. The purpose of the acquisition is to strengthen Nanologica's capacity and expertise in production and to accelerate the company's growth. The acquisition is expected to contribute positively to the Group's earnings and cash flow from 2026, and create meaningful operational and commercial synergies.
- On January 30, the board of directors resolved to carry out directed share issues totaling appx. SEK 13.7 million and a rights issue of appx. SEK 82.5 million, subject to approval by an Extraordinary General Meeting on March 4. The Rights Issue was secured to 100 percent by subscription commitments and underwriting commitments and provided the company with cash and cash equivalents of appx. SEK 38.8 million in addition to the entire outstanding loan from Flerie Invest being offset against shares. The main purpose of the issues is to strengthen the company's financial position and meet the need for working capital for the production and sale of the company's silica media NLAB Saga®, set-off of loans, and payment of the purchase price for the acquisition of Syntagon.
- In April, Nanologica received an order of appx. SEK 2 million for the company's silica-based purification media NLAB Saga® for evaluation on a production scale from a customer in India.

2026

CEO COMMENT

2025 was a crucial year for Nanologica with stabilized production, strengthened market position and a transformative acquisition that together lay the foundation for the next phase in the company's growth journey. We are entering this phase with a significantly increased capacity to create value for both customers and shareholders.

Andreas Bhagwani,
CEO

Following necessary adjustments in our production of silica-based purification media, we have since September a stable and significantly more efficient and predictable production process, which enables higher throughput and shorter lead times. This means that we can now meet the rapidly growing global demand for purification media for peptide drugs, in particular GLP-1 analogues.

Although we have not yet achieved a major breakthrough, we have secured important

customer references during the year, including a larger delivery of NLAB Saga® for insulin production where the customer intends to adapt their process to our silica, as well as deliveries for validation on a production scale in the US. The interest in the US is particularly gratifying, with higher price levels and great market potential. Although the lead times are long, we see a growing pipeline that is expected to contribute to future growth.

Nanologica operates in a market with strong underlying growth. The increasing prevalence of diabetes and obesity, together with a rapid commercial expansion of drugs in these areas as well as a plentitude of new treatments under development, means not only growth today but also for a long time to come. At the same time, the first biosimilars are starting to reach the global market, further strengthening the growth potential. This creates a very favorable market situation for us as Nanologica is one of the few players globally that can offer high volumes of high-quality silica for insulin and GLP-1 purification.

In 2025, we also broadened our product portfolio with NLAB® Idun, a media for ion exchange chromatography that works as a complement to NLAB Saga® in the purification of peptide drugs. This puts us in a unique position for the phase we are now entering, with a focus on scaled sales and deepened partnerships with pharmaceutical manufacturers worldwide.

In January 2026, we acquired Ardena Södertälje AB (now Syntagon AB). This means that the Group's sales will increase from appx. SEK 21 million to appx. SEK 100 million for 2025 and that we will strengthen our operational, strategic, and financial platform. The organization increases to about 70 employees and we are adding a well-functioning API business with an infrastructure that enables development of new products and services and a complement to our current contract manufacturer of silica. Our assessment is that the acquisition will make a positive contribution to the Group's earnings as early as 2026 and we see that the business has very good opportunities to grow, primarily through a strengthened sales organization.

For the first time ever, we now have all the pieces in place to drive sales and thereby create significant growth.

”

In parallel, in the spring of 2026, we carried out rights issues to repay loans, secure working capital, strengthen the sales organization, and finance the acquisition. This has resulted in a more robust balance sheet and good conditions for continued expansion.

For the first time ever, we now have all the pieces in place to drive sales and thereby create significant growth. We are thus entering 2026 with much more favorable conditions than before: stable and scalable production, a growing customer base in several geographies, a strengthened group structure with two complementary operations and a financial platform that enables continued expansion.

The focus going forward is to scale up sales, broaden the portfolio and further strengthen our role as a long-term partner to pharmaceutical manufacturers globally. I look forward to leading Nanologica into this next phase of the company's development.

STRATEGY

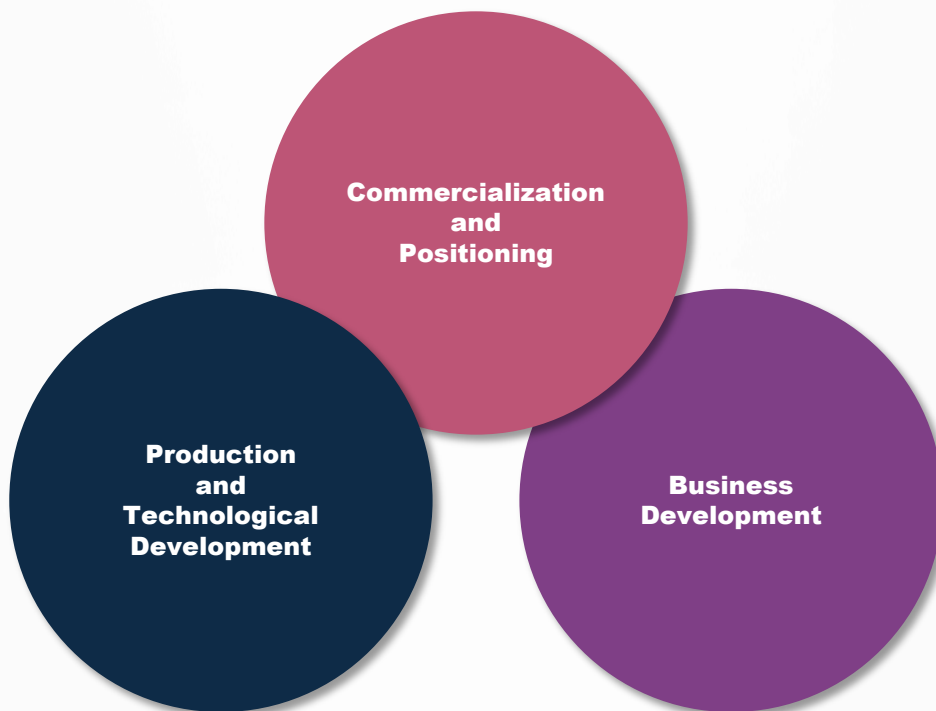

Nanologica shall be a driving force in reducing the cost of manufacturing peptide drugs, in particular diabetes and obesity drugs.

Nanologica's core competence lies in developing and manufacturing porous silica particles, which the company uses to develop products and expertise in chromatography. The business is focused on *preparative* chromatography, a technique for purification of substances in pharmaceutical production. The company's strategy is to establish a fast-growing, sustainable and profitable business by providing high-performance purification media, offering

customers application support and method development and developing customized products in chromatography.

As a producer of advanced inputs to pharmaceutical companies, Nanologica is well positioned to capitalize on the strong market growth that exists in drugs for the treatment of diabetes and obesity

Strategic focus areas

Production and technological development

Robust and efficient production is a prerequisite for profitability. In 2025, the company's production of silica has become stable, which means that the focus is now shifting to optimization of the production process.

Through process optimization and technical development, the company intends to shorten lead times, increase product yield, and improve production economy. More efficient production will also reduce the environmental impact. Nanologica works strategically with risk management to make the company less vulnerable to possible downtime in production in the future.

Commercialization and positioning

Nanologica has several products launched on the market, of which the main product NLAB Saga® accounts for the majority of sales. Nanologica primarily targets manufacturers of GLP-1 analogues, insulin and other peptide drugs that require a chemically and mechanically stable silica in purification processes, where NLAB Saga® has clear and documented advantages over competitors.

NLAB® Idun is in the beginning of its commercialization phase and means that Nanologica can now offer a complete workflow for purification of peptide drugs, which makes the company unique in the market for purification of GLP-1 analogues and insulin.

Sales are conducted directly and together with partners in all major markets; India, China, the United States and Europe. The focus has initially been on the markets in Asia, but will shift more towards the US, where prices are generally higher and where the majority of development projects for new drugs are conducted. By working closely with customers in the development of their processes, the strategy is to build strong references through satisfied customers and take a market position characterized by high quality, reliable delivery times and superior application support.

Business development

The company's main focus is on the commercialization of NLAB Saga®. However, an important part of the company's long-term growth strategy is to broaden the product portfolio with additional products and services, through own development and through collaborations or acquisitions. This creates opportunities to offer customers additional cost-saving workflows and tie customers closer to the company, while significantly increasing the size of the company's addressable market.

In 2025, the company launched a media for ion exchange chromatography, NLAB® Idun, and is running a development program for additional chromatography media. In 2025, the company has also broadened its portfolio with silica for analytical use sold in bulk, where side fractions from the large-scale production of NLAB Saga® are used as raw material.

Chromatography

Nanologica's main focus in chromatography is HPLC (high-performance liquid chromatography) on an industrial scale. HPLC is a separation method based on different substances in a solution passing through a column at different paces.

In an HPLC system, there is a mobile phase (moving phase, liquid) and a stationary phase (solid phase, e.g. silica). The task of the mobile phase is to transport the sample to be analyzed or purified through the system, and the task of the stationary phase is to interact with the different substances in the sample. Inside the column, the substances in the mobile phase interact differently with the stationary phase. This means that the substances are slowed down more or less and migrate through the column at different paces and thus come out of the column at different times. In this way, the substances in the sample are separated from each other, which means that for example impurities can be removed from a pharmaceutical substance.

HPLC is a well-established purification method that was introduced just over 50 years ago and is currently used in the production of many different types of pharmaceuticals.

Preparative chromatography is used as a purification process in the production of peptide drugs.

Purification media (e.g. silica) is packed in preparative columns that can hold up to hundreds of kilograms.

Analytical chromatography is used as an analysis method in the pharmaceutical and food industries, among others, to find out which substances are present in a solution and in what concentration.

For this, analytical columns containing a few grams of silica are used. Analytical chromatography is also used for evaluation of media before the customer chooses material (purification media) for preparative chromatography.

FIVE REASONS TO INVEST IN NANOLOGICA

Through chromatography products and services that enable pharmaceutical manufacturers to streamline their workflows and lower their production costs, Nanologica strives to both create value for its shareholders, and to contribute to that more patients worldwide have access to adequate treatments, at an affordable price.

1 Fast-growing addressable market

Nanologica supplies advanced consumables to pharmaceutical manufacturers in a global and growing market for purification of protein and peptide drugs, such as insulin and GLP-1 analogues. The market is not sensitive to economic cycles and growth is driven by an increased incidence of diabetes and obesity in combination with the launch of new drugs for treating these diseases.

2 Oligopoly market with high barriers of entry

The market for high-quality silica for chromatography is an oligopoly market with a few producers, with only one producing the same type of high-quality silica as Nanologica. The entry barriers are high as large-scale manufacturing of high-purity spherical silica particles for chromatography is a complex process that takes time to establish.

3 High-quality products

Nanologica's silica-based purification media is specially formulated for insulin and peptide purification and is used by several customers in the production of pharmaceuticals. The products purify efficiently and last a long time, enabling increased productivity and lowered production costs for pharmaceutical manufacturers.

4 Ongoing commercialization and a clear growth strategy

Commercialization of the company's products is expected to lead to a sharp increase in sales and Nanologica continues to build strong references through high product quality and superior application support. By broadening the offering with complementary chromatography products and services, the addressable market increases significantly.

5 Medicines for more patients

By providing products and services that contribute to lower costs and more efficient production for pharmaceutical manufacturers, Nanologica can enable more people access to life-saving medicines at affordable prices.

MARKET TRENDS

The need for silica for preparative chromatography is driven by the amount of the active substance in a drug that needs to be produced. Both the well-established insulin manufacturing and the fast-growing peptide drug segment (which includes GLP-1 analogues and other weight-regulating drugs) must use silica-based preparative chromatography in the final stage of manufacturing to achieve the purity required for the drug.

Megatrends that positively affect Nanologica's business

The number of patients with diabetes is increasing

The number of patients with obesity is increasing

Strong development of new peptide drugs

Medicines need to become cheaper

The number of patients with diabetes is increasing

Globally, more than 535 million people are currently living with diabetes, of which 4 out of 5 live in low- or middle-income countries. The number of patients with diabetes is expected to increase to 784 million by 2045. The increase is primarily occurring in India, China, Pakistan, Bangladesh and Indonesia¹, driven mainly by an increasing and aging population, increased proportion of overweight people, changed lifestyles, and improved diagnostics.

The number of patients with diabetes requiring insulin treatment is expected to increase by approx. 45 percent by 2045.² The increasing prevalence of diabetes globally, especially in low- and middle-income countries, is a strong driver behind a rapidly growing demand for peptide-based drugs.

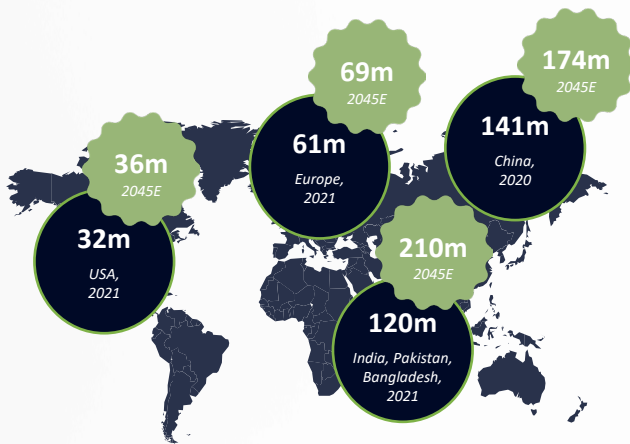

The number of patients with obesity is increasing

In 2020, the number of patients in the world with obesity (BMI³ ≥30kg/m²) was estimated to amount to approximately 810 million and the number is expected to grow to almost 1.8 billion by 2035. The number of patients with obesity or overweight (BMI ≥25kg/m²) is expected to reach almost 3.3 billion globally by 2035. With current trends, more than 750 million children (5-19 years old) are expected to be overweight and obese by 2035.⁴

BMI ≥25kg/m² is estimated to cause more than five million deaths annually and has a major impact on both healthcare systems and society at large. The obesity epidemic is thus one of the greatest threats to global health and is also a major threat to the global economy. High BMI is projected to reduce the global economy by over USD 4 trillion by 2035, nearly 3 percent of global gross domestic product.⁵

The diabetes population is increasing

Number of patients with diabetes, milion

The number of diabetes patients in the world exceeds 500 million, many in need of insulin or similar medicines to survive.

Obesity is an ongoing epidemic

Number of adults with obesity, million

More than half of the world's population is expected to be obese by 2035 at a global cost of USD 4 trillion per year.

³ Body Mass Index, a measurement for body weight in relation to a person's length.

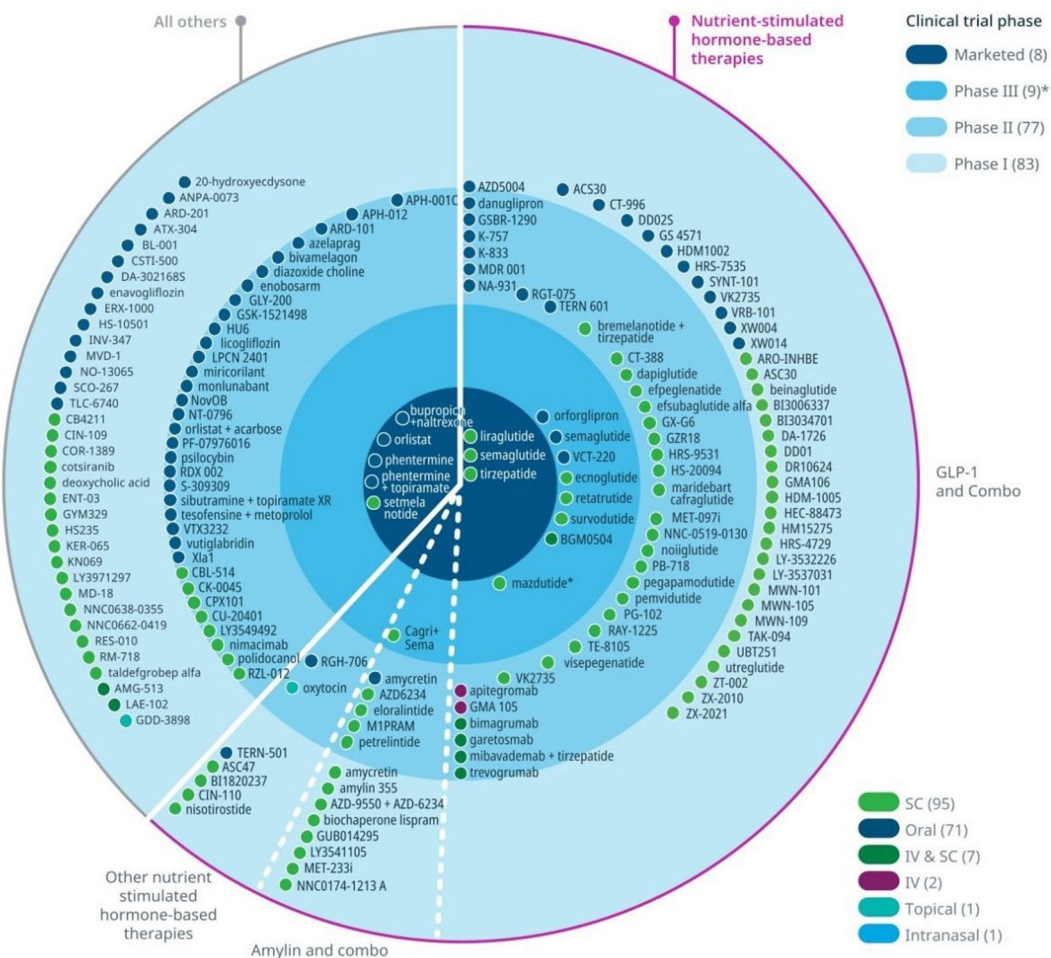

^{4,5} World Obesity Federation. World Obesity Atlas 2024

Development of new peptide drugs

Since the introduction of insulin for the treatment of diabetes a century ago, more than 80 peptide drugs have reached the market for a wide range of diseases including diabetes, obesity, cancer, multiple sclerosis, osteoporosis, HIV, and chronic pain.

Peptide-based drugs are available in more than 400 clinical trials and there are currently more than 200 approved peptide drugs worldwide.

A large proportion of peptide drugs under development are related to obesity. In recent years, incretin drugs such as liraglutide, semaglutide and tirzepatide in injection form have been approved for the treatment of obesity and the use of these drugs has grown significantly. At the end of 2025, the first oral formulation of semaglutide was approved, which is expected to gain market share as the form of administration is easier for many patients. A large number of drugs for obesity are under development, with different active substances and different forms of administration.

Obesity drugs on the market and under development. Image from IQVIA Institute Global Trends in R&D Report 2025.

Another trend is increased launches and approvals of new peptide drugs for more indications. Obesity is expected to be a strong driver of the market, but in early 2025 semaglutide was approved for treating chronic kidney disease. Studies are also underway in indications such as cardiovascular diseases, Alzheimer's, NASH and sleep apnea. This is likely to lead to further increased use of GLP-1 analogues and similar peptide drugs.

Common to the majority of launched peptide drugs and peptide drugs under development is that they are purified through preparative chromatography during manufacturing.

Medicines need to become cheaper

Treatment of patients with insulin-dependent diabetes is mainly done with recombinant human insulin. Of patients with type 2 diabetes, just over 60 million currently need to be treated with insulin. Only about half of these are estimated to receive the insulin they need, often because of the fact that human insulin is expensive and the country's health care system does not pay for it.^{6,7} While the cost of diabetes treatment in high-income countries is largely covered by the general insurance system, many patients in low- and middle-income countries have to pay themselves without the support of insurance systems.⁸

There is a lot of pressure and several government initiatives to produce peptide drugs cheaper, especially in India and China. The WHO has defined several measures to increase the availability of and reduce the price of human insulin and insulin analogues. These include a requirement for increased transparency in the pharmaceutical market, policies and regulations to prevent unreasonably high pharmaceutical prices, that healthcare actors should be forced to promote the medicines with the lowest price, and simplification of the approval process for biosimilars to get more players to enter the market.⁹

⁸ David Beran et al. A Global perspective on the issue of access to insulin, *Diabetologica*, 64, 954-962, 2021.

The number of doses of drugs drives the market for silica for preparative chromatography

The market for silica media for preparative chromatography has grown steadily over the past 40 years. Nanologica estimates that the market will grow even faster over the next 20 years, driven by a need for more doses of drugs, primarily in four categories.

Approved GLP-1 analogues

The market for GLP-1 analogues is mainly dominated by Novo Nordisk and Eli Lilly. They are behind *Ozempic*[®], *Wegovy*[®] and *Mounjaro*[®], for example, and after the market launch of these drugs, demand has not been able to be met. At the end of 2025, *Wegovy*[®] was also launched in tablet form, which is expected to increase its use further. An oral formulation requires a significantly higher dose of active substance than an injection formulation (about 70 times the amount of drug per patient per week), which would lead to a greatly increased need for silica as well. Production capacity is being expanded, for example at subcontractors to these leading companies.

The global GLP-1 analogue market is expected to 2032, corresponding to an average annual growth rate of approx. 10 percent.¹⁰

The total market for obesity drugs is difficult to assess as it is a new market, but is estimated to grow to as much as USD 131 billion by 2028¹¹.

GLP-1 analogues and other peptide drugs in development

Novo Nordisk and Eli Lilly are also leaders in the development of new GLP-1 analogues and other peptide drugs. However, there are a number of players working on drug candidates under development in different phases. Common to the majority of these is that they are molecules that will need preparative chromatography for purification during production.

Biosimilars

A biosimilar is a biological drug that has been developed to be similar and comparable to an original biological drug and that contains a version of the same active substance as the original drug.

¹⁰ Eurostat, Trust for America's Health.

¹¹ IQVIA Forecast Link, IQVIA Institute, December 2023.

Companies that manufacture biosimilars do not have to go through the same kind of costly research required for an original medicine, which allows them to maintain a lower, more competitive price. This also means that production volumes can quickly become very large. Authorized biosimilars may be placed on the market as soon as the market protection (the patent) of the original drug has expired.

Several patents in the field of insulin and insulin analogue have recently expired and a number of patents will expire in the coming years. The same applies to GLP-1 analogues, where, for example, the patent for semaglutide expires in China in 2026. This is driving the development of biosimilars. It is mainly countries in Asia, such as China and India, that are quick to bring biosimilars to the market and here strong growth is expected to take place. The healthcare system and the authorities in Europe and the United States have also become aware of the cost savings that can be made by replacing original drugs with biosimilars, and several initiatives are being taken to increase the prescription of biosimilars.

Nanologica believes that as more biosimilar producers enter the market, prices for these drugs will be lowered. This is likely to lead to increased volumes as well as an even stronger focus on cost savings in the production process for these drugs.

Insulin and insulin analogues

The market for insulin has had a stable growth for a long time and is expected to continue to grow in the future.¹² The global human insulin market is projected to grow from USD 27 billion in 2023 to USD 33 billion in 2028, corresponding to an average annual growth rate of approx. 4 percent.¹³

¹² Basu S, Yudkin JS, Kehlenbrink S, Davies JI, Wild SH, Lipska KJ, et al. Estimation of global insulin use for type 2 diabetes, 2018-30: a microsimulation analysis. *Lancet Diabetes Endocrinol.* 2019; January;7(1):25–33.10.1016/S2213-8587(18)30303-6PMID:30470520.

¹³ Mordor Intelligence.

¹⁴ Generally accepted as the best available method.

¹⁵ The assessment is based on dialogues with customers, potential customers, competitors, advisors within chromatography, as well as collection of data from open sources.

The market for silica for preparative chromatography

What drives the market for silica for preparative chromatography is not *the value* of the markets for insulin or other peptide drugs, but the *amount of drugs* manufactured. To date, there is no alternative purification method to silica-based preparative chromatography that can reach the purity required for peptide drugs, despite the fact that the method has been around for more than 40 years. This suggests that silica-based preparative chromatography will be the gold standard¹⁴ for the foreseeable future.

Nanologica believes that an increased demand for insulin and insulin analogues, peptide drugs such as GLP-1 analogues and similar incretin drugs, as well as biosimilars will lead to a sharp increase in the market for preparative silica. In particular, the demand for the type of high-quality silica produced by Nanologica is expected to increase.¹⁵ Using a chemically and mechanically durable product such as Nanologica's NLAB Saga® can mean significant cost savings for the producer when purifying these types of drugs.

Nanologica estimates that the global market for silica-based chromatography media for the manufacture of insulin and other peptide drugs in 2024 amounted to USD 100 million. The company estimates that this market will grow to at least USD 150 million by 2030.

If oral formulations of semaglutide break through in the market, the need for silica will increase significantly. Treatment with oral formulation requires about 70 times more drug substance, which also means that an increased amount of silica is consumed during production as the ratio between the two is linear.

The total chromatography market (including other purification media, hardware, and services) for customers in this segment is estimated to be at least twice as large and grow by 5-10 percent year-on-year.

COMPETITORS

Producing high-purity spherical silica particles for preparative chromatography is a complex process, and developing and establishing large-scale production of such silica takes a long time. This means that the barriers of entry for new players are high and has led to the market for silica for preparative chromatography being considered as an oligopoly market.

There are only a handful of large-scale manufacturers of high-purity spherical silica particles in the world. Competition in silica as a purification media in the insulin and peptide area consists primarily of the product/brand Kromasil, which is currently the unchallenged market leader thanks to its silica quality. Other than Kromasil, the biggest competitors are Osaka Soda and YMC.

In China, some new players have appeared, for example NanoMicro, which clearly indicates that there is a need for additional suppliers of silica for preparative chromatography. However, the quality of silica from these suppliers does not reach the

same high level as that of the market leader and Nanologica's silica. The quality of Nanologica's silica is on par with the market leader Kromasil, which is why the company believes that the opportunities to take substantial market shares in a growing market are good.

The expected increase in drugs that need silica for purification means that the global need for high-quality silica is expected to increase sharply. Capacity expansion has taken place among competitors, but Nanologica makes the assessment that this expansion will not be able to meet the increased demand.

Silica particles in a scanning electron microscope

PRODUCTS

Nanologica has three market-launched product families; NLAB Saga®, NLAB® Idun and NLAB® Siv, as well as additional products under development. In addition to products, Nanologica offers services in application and method development in chromatography.

NLAB Saga®

The company's main product NLAB Saga® is used in preparative chromatography on an industrial scale and is specially developed to suit purification processes for insulin and other peptide drugs such as GLP-1 analogues. The longevity and performance of silica in preparative chromatography are largely determined by the mechanical and chemical stability of silica. Through a proprietary manufacturing process, Nanologica is one of the few suppliers in the world that has a silica that is mechanically and chemically stable enough to withstand the processes and conditions that prevail in, for example, insulin purification. This means that the purification process in many cases can be streamlined, and that the purification product lasts a long time, which results in lower production costs for customers.

NLAB Saga® is also sold in pre-packed columns for analytical and semi-preparative chromatography. Analytical columns are an important tool for evaluation of silica before the customer chooses material (purification media) for preparative chromatography. Since the start of large-scale silica production, analytical chromatography has developed into a supporting business for the company and a springboard for preparative chromatography.

NLAB Saga® has been tested and evaluated with excellent results by several customers regarding quality, performance and durability and is used by

several customers in the production of pharmaceuticals. Large-scale production of NLAB Saga® takes place at a manufacturing partner with facilities in the UK and Ireland.

NLAB® Idun

NLAB® Idun is an agarose-based purification media for ion exchange chromatography and is used in the purification step preceding the step where NLAB Saga® is used in the purification of GLP-1 analogues and other peptide drugs. NLAB® Idun was launched in 2025 and production takes place at a partner in Europe.

NLAB® Siv

NLAB® Siv is a non-silica-based purification media used in preparative chromatography for purification of molecules other than peptides. NLAB® Siv was developed on behalf of a customer and the first products were sold in 2024. Production takes place at a partner in Europe.

Application development and similar services

Through application and method development, tailor-made methods are offered, as well as expertise and support in optimization of customers' workflows.

Products under development

Nanologica has a development program for additional chromatography media. The first products of this program were sold at the end of 2025.

COMMERCIALIZATION

Nanologica primarily targets customers who need a high-quality silica with high mechanical and chemical stability. These are pharmaceutical companies or contract manufacturers of insulin and insulin analogues, GLP-1 analogues, biosimilars to insulin and GLP-1 analogues, as well as certain other peptide drugs.

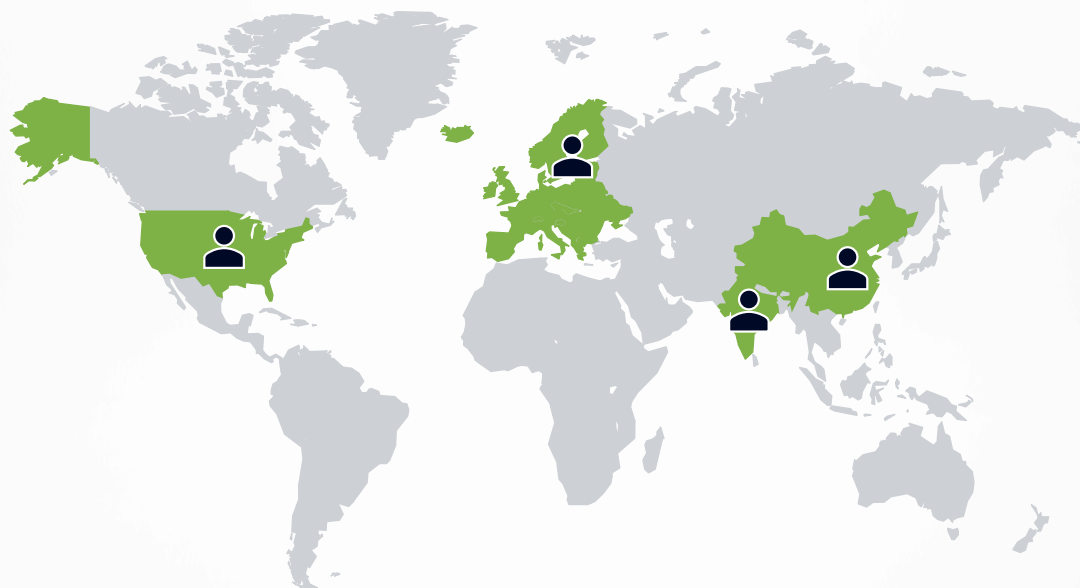

The sales cycle is 3 – 18 months. The customer first evaluates the material in an analytical column (a few grams of silica) and gradually increases evaluation to full production scale (up to hundreds of kilograms).

Nanologica's main focus is on the commercialization of NLAB Saga®. At the same time, work continues on the development and commercialization of complementary products, primarily the purification media NLAB® Idun, which

was launched in 2025 and which serves as a complement to NLAB Saga® in the purification of peptide drugs.

The development of new products and services is a step towards being able to offer customers a broad portfolio of effective products, tailor-made methods, as well as expertise and support in optimizing workflows. This will allow the addressable market to be expanded, which is an important part of the company's long-term growth strategy.

Nanologica has its own sales organization that covers all major markets. The organization, which includes dedicated sales representatives for India, China, the United States and Europe, is led by a Senior Vice President Chromatography

 Local representative and/or partner

OUR WHY

The number of patients with diabetes and obesity is expected to increase sharply in the coming years and, as a result, also the need for drugs to treat these diseases. In the manufacturing of most diabetes and obesity drugs, high-quality silica is needed to purify the finished drug.

By providing products that purify effectively and last a long time, Nanologica can lower the cost of

manufacturing for these drugs.

Nanologica's products for preparative chromatography can thus contribute to increased access to life-saving drugs for patients with diabetes and obesity at affordable prices.

In this way, we can contribute to a more equal and sustainable world – that is our why.

THE SHARE AND SHAREHOLDERS

Nanologica's share has been listed on Nasdaq Stockholm's main market since March 29, 2022 and is included in the Small Cap segment. Before that, the share was traded on Spotlight Stock Market, where the company was listed in 2015. The stock is traded via banks and stockbrokers under the ticker NICA. The ISIN code is SE0005454873. The number of outstanding shares at the end of the year amounted to 88,369,820. After the end of the year, the company has performed share issues which have increased the number of shares to 328,769,846.

Shareholders

On December 31, 2025, the number of shareholders was 2,821 (2,511). The largest shareholder, Flerie Invest AB, held 43.6 percent of the total number of shares, followed by the Konstakademiens stiftelser with 4.8 percent and CEO Andreas Bhagwani through the company Vega Bianca AB with 4.6 percent. In total, the ten largest shareholders' holdings amounted to 65.9 percent of the total number of shares. At the end of the year, Nanologica's board of directors, management team, and employees together owned 49.7 percent of the shares.

| Owners as of December 31, 2025 | Shares, number | Share % |
|------------------------------------------|-------------------|--------------|
| Flerie Invest AB | 38,516,594 | 43.6 |
| Konstakademien | 4,258,218 | 4.8 |
| Vega Bianca AB | 4,034,528 | 4.6 |
| Avanza Pension | 2,875,412 | 3.3 |
| CJ Hall Invest AB | 2,084,746 | 2.4 |
| Nordnet Pensionsförsäkring AB | 1,967,669 | 2.2 |
| Andre Oscar o Anna Wallenbergs stiftelse | 1,835,281 | 2.1 |
| Swedbank Robur Microcap | 906,000 | 1.0 |
| SEB AB Luxembourg Branch | 895,256 | 1.0 |
| Wallenbergska familjestiftelsen | 703,259 | 0.8 |
| The ten largest shareholders | 58,076,963 | 65.9 |
| Other shareholders (2,811) | 30,292,857 | 34.1 |
| Total | 88,369,820 | 100.0 |

* Flerie Invest AB is owned by Nanologica's board member Thomas Elderred.

** Vega Bianca AB is owned by Nanologica's CEO Andreas Bhagwani.

Share capital

As of December 31, 2025, the share capital in Nanologica AB amounted to SEK 4,506,860.82 divided into 88,369,820 shares, each with a quota value of SEK 0.051. For the development of the share capital, see note 23 and 24. After the end of the year, share issues have increased the share capital to SEK 16,767,261.942.

Share-based incentive programs

Incentive program 2023/2026 for management team and employees

Each warrant of series TO 2023/2026 entitles the holder to subscribe for one new share in the company during the period August 1, 2026 to November 30, 2026 at a subscription price of SEK 30 per share. In the program, 180,000 of the total 245,000 warrants have been subscribed. Based on the number of shares in the company as of the date of the report, the dilution effect will be a maximum of 0.2 percent if all warrants under the program are exercised.

The purpose of the incentive program is to encourage a broad shareholding among Nanologica's employees, attract and retain qualified employees, and to increase employee motivation. Share-based and share-price-based incentive programs shall, if applicable, be resolved by the Annual General Meeting.

For more information about share-based incentive programs, see note 23.

Warrants of series TO5

TO5 was issued as part of each unit in the unit issue resolved in August 2024. Each warrant of series TO5 entitled the holder to subscribe for one new share in the company during the period May 7, 2025 up to and including May 21, 2025 at a subscription price of SEK 3 per share. The warrants of series TO5 were admitted to trading on Nasdaq Stockholm under the ticker NICA TO5. A total of 12,568 warrants were exercised, which provided the company with SEK 37,704 in cash. The share

capital increased by SEK 641,866. The dilution effect was negligible.

Share performance in 2025

At the end of 2025, the share price was SEK 0.78. The share's highest price in 2025 of SEK 2.50 was recorded on January 23 and the share's lowest price in 2025 of SEK 0.67 was recorded on December 22. During the year, the share price fell by 57.1 percent, from SEK 1.82 to SEK 0.78.

Development of the share price during 2025

Graph of the share price development: Closing price in SEK (green line) and volume in number of shares (blue bars).

Dividend

The board of directors and the CEO propose that no dividend be paid for the financial year 2025-01-01 – 2025-12-31.

Information

Important events and financial reports are published through press releases and on the company's website www.nanologica.com, where they are also kept available. Through the subscription service on the website, it is possible to subscribe to Nanologica's financial reports and press releases via e-mail. The website also contains general company information, other news, video presentations and information on corporate governance.

Nanologica's communication shall be characterized by swiftness, reliability and transparency. To be reliable, the information must be relevant and accurate, which means, among other things, that Nanologica refrains from speculating on future developments or

hypothetical events, as well as commenting on rumors.

Any questions can be directed to ir@nanologica.com and will be answered as soon as possible.

Annual General Meeting

Nanologica's Annual General Meeting 2026 is planned to be held in Stockholm on Thursday, May 21, 2026. All AGM documents, including the notice, will be published on the company's website. More information about the Annual General Meeting is stated in the notice.

Financial reports are published on [Nanologica's website](#) at 08.10 on the announced date.

Towards a sustainable future

Nanologica aims to contribute to more people having access to adequate medical treatments. By developing our core business and working towards our vision – *better and cheaper medicines to a larger number of patients* – we have the opportunity to contribute to a more equal and sustainable world.

Over the next 20 years, the prevalence of diabetes and obesity are predicted to increase sharply, and as a result, the need for insulin and other drugs. In the manufacture of most diabetes and obesity drugs, high-quality silica is needed to purify the finished drug.

By providing a silica that purifies effectively and lasts a long time, Nanologica can lower the cost of manufacturing these drugs, which can make them available to more patients in need. Nanologica's products for preparative chromatography can thus contribute to an increased access to vital drugs for patients with diabetes and obesity.

Streamlining the purification process in the manufacture of insulin and other peptide-based drugs can also contribute to a reduction in the use of solvents in the production of these drugs. In this way, Nanologica's silica for preparative chromatography can contribute to a more sustainable industry, with a more efficient use of resources and industrial processes.

The facilities where Nanologica has its large-scale production of silica for preparative chromatography have a strong focus on responsible handling of chemicals and waste, where, for example, wastewater is treated at an on-site biological treatment plant, hybrid waste is managed through anaerobic digestion, and solvent waste is recycled and reused.

When we are successful in what we do, more people can have access to medicines, while at the same time we can contribute to a more sustainable industry. Thus, we have a direct impact

on both people and the environment. Our ambition is to maximize our positive footprint and minimize negative impact on the world around us.

Policies

Nanologica has a number of policies that are directly linked to the sustainability perspective and that support the company's work in sustainability. The internal Code of Conduct describes ethical principles and provides instructions for how employees should act and conduct business in a responsible manner. The purpose of the Code of Conduct is to promote a well-organized, respectful and cooperative environment, as well as to combat corruption, conflicts of interest and unethical behavior. All employees annually sign that the Code of Conduct must be followed.

With the support of the HR policy, Nanologica works actively with diversity and equality issues, working conditions and work environment, skills development, a fair recruitment process and salary setting, as well as zero tolerance for all types of harassment and discrimination. Linked to the HR policy, there is a whistleblower policy and a whistleblower function with the aim of increasing security, ensuring independence, and avoiding conflict of interest situations within the company.

The company also has an environmental policy that works for a more efficient use of resources, more clean and environmentally friendly technologies and processes, minimizing the climate impact of travel and raising awareness of environmental issues among all employees.

Employees

Safety and health always come first

The safety of our employees is paramount, and a safe and healthy work environment is a top priority to Nanologica. Security checks are carried out regularly in both the laboratory and office environment. Safety procedures and training are regularly reviewed for all employees.

Nanologica works continuously to promote employee health and work-life balance. The company provides wellness allowances to all employees and carries out activities with the aim of encouraging exercise, personal development, and general well-being.

Diversity and equality

Diversity is a competitive advantage and a success factor for the company, and being able to utilize different perspectives, experiences and ideas leads to a more innovative, competitive and productive organization. A multi-faceted workforce also reflects the international market in which Nanologica operates.

Gender equality and equal treatment are a matter

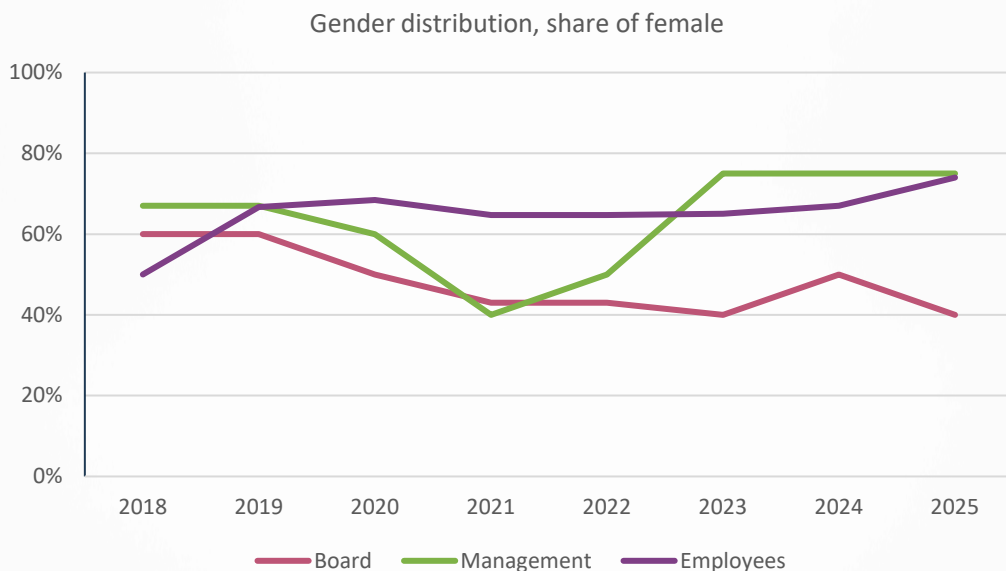

of course for Nanologica. The company strives for diversity in all parts of the organization, from the board to the management team and employees.

The company offers equal opportunities for employment, promotion, salary and other benefits for men and women, as well as equal opportunities for leadership for men and women at all decision-making levels.

The company actively takes gender equality into account when appointing new positions and applies salaries based on experience and competence.

Culture

Nanologica's culture is based on the company's core values: collaboration, curiosity and courage. The key to engaged and performing employees lies in a courageous organization characterized by strong security. Employees are encouraged to take initiative and responsibility, to innovative thinking, and to work together to solve challenges. The values guide the organization in what needs to be done to achieve the company's vision and are used actively in the daily work.

CORPORATE GOVERNANCE

A word from the chairman of the board

Gisela Sitbon,
styrelsens ordförande

Ten years of product development – and the next chapter begins

When I took over as chairman just over 11 years ago, Nanologica was a promising company with potential. Today, we are a growing manufacturing company with global ambitions and products that contribute to real benefit for patients around the world. Over the years, we have built up an organization with deep expertise in method and application development. We have launched and developed NLAB® Saga, entered the world's most important markets for pharmaceutical manufacturing and seen a steadily growing interest in our solutions. It is this work – this patient, focused work – that forms the basis of everything we do today.

The year 2025 marks a turning point. We have solved many of the technical challenges that previously hindered us. Our production is now stable but must also become increasingly cost-effective. Here work remains. At the same time, the customer base is growing and demand continues to strengthen. It's time for the next step in the company's development – from stabilization to scalable expansion.

We are now building a Board for the future and are pleased to present three new Board members, each of whom brings valuable expertise for the next chapter of Nanologica's development. Mark Quick, from Flerie AB, has deep experience from strategic business development, mergers and acquisitions. Erik Haeffler, CEO of APL, is a recognized expert in manufacturing, supply chain, and production optimization, and Jeremie Trochu, from Ardena, with extensive experience and

knowledge of the CDMO industry. In addition, Thomas Eldered, Flerie AB, will take over as chairman of Nanologica. Personally, I am very happy about the opportunity to continue to contribute as a board member as we build on what we have created together.

At the beginning of 2026, we completed an acquisition in line with our strategy – to broaden the product portfolio and strengthen our small-scale in-house production capacity. We acquired Syntagon, an established contract development and manufacturing organization (CDMO) in Södertälje. Syntagon is a business we know well from before, through several years of collaboration and with good insight into each other's skills and capacities. Together, we will have better opportunities to accelerate the development of both existing and new products and offer our customers more complete solutions.

This acquisition – together with a strengthened Board of Directors – marks the beginning of a transformative chapter for Nanologica. We are now taking the step from being a purification media company to becoming a more integrated manufacturing group with both innovation and high operative skills. Our goal is clear: to develop Nanologica into a stable and profitable manufacturing industry in Sweden, known for its high-quality products, its operational excellence and its long-term commitment to Sweden as a manufacturing country.

It is with great confidence that I now hand over the chairman's gavel to Thomas Eldered. Your experience and commitment are what Nanologica now needs to realize the opportunities that lie ahead.

Uppsala in April 2026

Gisela Sitbon, Chairman of the board

Corporate governance model

Nanologica AB, corporate identity number 556664–5023, is a Swedish limited liability company with head office in Södertälje, Sweden. Since March 29, 2022, the company is listed on Nasdaq Stockholm Main Market (Nasdaq) and belongs to the Small Cap segment. The company has previously been listed on Spotlight Stock Market since October 30, 2015.

Corporate governance in Nanologica is in accordance with Swedish law, rules and regulations for Nasdaq, the Swedish Code of Corporate Governance (the Code), as well as internal instructions and guidelines. Corporate governance is divided into external and internal governance documents.

External governance documents

The external governance documents constitute the framework for corporate governance. These include the Swedish Companies Act, the Swedish Annual Accounts Act, the Nasdaq Main Market Rules, and the Code.

Nanologica reports the following deviation from the Code:

- The basis for the decision for the company's ongoing option program 2023/2026 differs in one respect from what according to the Swedish Corporate Governance Board's rules regarding remuneration to senior executives and on incentive programs ('The Remuneration Rules') is to be considered as good practice on the stock market. The vesting period for the option program 2023/2026 (in this context the period from the acquisition of the option until a share may be acquired under the option) is less than the Remuneration Rules' general rule of three years.

The decision-making basis does not contain any specific justification for why the vesting period is less than three years, which is not compatible with the Remuneration Rules. In order for the design of the program to nevertheless be compatible with the Remuneration Rules, Nanologica has ensured that all option holders in the option program in connection with the

conclusion of the transfer document have undertaken to the company not to exercise the options for subscription of shares until 1 August 2026 at the earliest. This contractual commitment thus means that the options can only be exercised by option holders at the end of the option program's vesting period.

No other deviations from the Code occurred during the year.

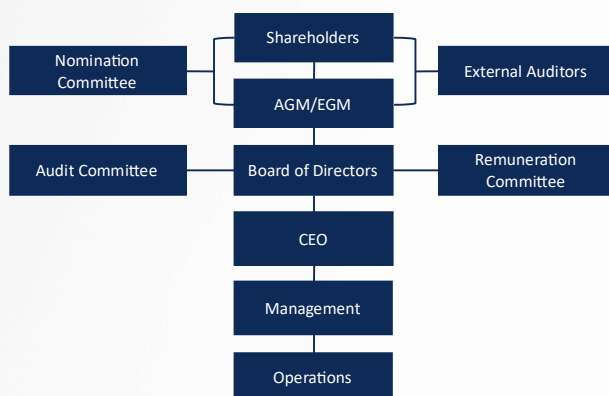

The company was not subject to any decision of the Nasdaq disciplinary board or any statement by the Swedish Securities Council during 2025.

Internal governance documents

The internal governing documents consist primarily of the Articles of Association, internal instructions, policies and guidelines. Examples of internal instructions and guidelines include the board of director's rules of procedure, formal work plans for the committees, and instructions to the CEO. In addition, there are a number of policy documents and manuals that contain internal rules, recommendations and principles, which provide the company and its employees with guidance within the framework of the company's operations.

Nanologica strives to maintain a high standard through clarity and simplicity in its management system and governing documents. In the company's governance model, shareholders are the ultimate decision-makers with regard to the group's governance through the election of the board of directors at the Annual General Meeting. The board of directors is in turn responsible for ensuring that corporate governance complies with applicable legislation and other external and internal governing documents.

Governance, management, and control of Nanologica is divided between the shareholders through the Annual General Meeting, the board of directors, the CEO and the auditors in accordance with the Swedish Companies Act and the Articles of Association. Increased transparency provides good insight into the company's operations, which contributes to effective governance.

Distribution of governance, management, and control of Nanologica.

Shareholders

On December 31, 2025, Nanologica's share capital amounted to SEK 4,506,860.82 and the number of shares to 88,369,820 with a quota value of SEK 0.051 per share. There is one class of shares and all shares have equal voting rights as well as a share in the company's assets and earnings. The share register is maintained electronically by Euroclear Sweden AB. According to this, the number of shareholders at year-end was 2,821 (2,511) and the ten largest shareholders together owned 65.9 percent of the total number of shares. As of December 31, 2025, Flerie Invest AB owned more than thirty percent of the shares in the company.

There are no restrictions on the transfer of shares or restrictions on voting at general meetings. As far as the company is aware, there are no agreements between owners that limit the transferability of shares.

For more information about Nanologica's share, see the section on the share and owners on pages 25–27, or visit www.nanologica.com.

Annual General Meeting

The shareholders' influence is exercised at the general meeting, which is the company's highest decision-making body. Any shareholder who is entered in the share register maintained by Euroclear Sweden AB on the record date of the

annual general meeting and who gives notice of attendance in accordance with what is stated in the notice has the right to participate, in person or through an authorized proxy. The annual general meeting may decide on all matters relating to the company that do not fall under the exclusive competence of another corporate body according to the Swedish Companies Act or the Articles of Association. The AGM may, for example, resolve on an increase or decrease in the share capital, amendments to the articles of association, and that the company shall enter into liquidation. With regard to new issues of shares, convertibles or warrants, the annual general meeting has, in addition to the possibility to decide on this, the opportunity to authorize the board of directors to make issue resolutions.

Each shareholder, regardless of the size of the shareholding, has the right to have a specified matter dealt with at a general meeting. Shareholders who wish to exercise this right must submit a written request to the board of directors. Such a request shall normally be received by the board of directors in such time that the matter can be addressed in the notice of the general meeting.

The annual general meeting is held annually within six months of the end of the financial year. The Code stipulates that the chairman of the board of directors, together with the quorum of the board of directors and the CEO, shall attend the annual general meeting. The chairman of the meeting shall be nominated by the nomination committee and elected by the meeting.

The tasks of the Annual General Meeting include electing the company's board of directors and auditors, adopting the balance sheet and income statement, deciding on the appropriation of profit or loss in accordance with the adopted balance sheet, and deciding on discharge from liability for the members of the board of directors and the CEO. The AGM also resolves on the fees to be paid to the members of the board of directors and the company's auditors, as well as principles for the composition and work of the nomination committee.

An extraordinary general meeting may be convened by the board of directors when the board of directors deems that there is reason to hold a general meeting before the next annual general meeting. The board of directors shall also convene an extraordinary general meeting when the company's auditor or a shareholder holding more than ten percent of the shares requests in writing that a general meeting be held to deal with a specific matter.

According to the articles of association, notice of the annual general meeting shall be given by means of an announcement in the Swedish Official Gazette and by making the notice available on the company's website. Information that a notice has been issued shall be announced in Svenska Dagbladet. Notice of the annual general meeting and extraordinary general meeting shall be given in accordance with the rules set out in the Swedish Companies Act.

Shareholders who wish to participate in the negotiations at the annual general meeting must, in addition to the conditions for participation set out in the Swedish Companies Act, also notify the company of their intention to attend the meeting no later than the date stated in the notice of the meeting. The latter day may not be Sunday, another public holiday, Saturday, Midsummer's Eve, Christmas Eve or New Year's Eve and may not fall earlier than the fifth weekday before the meeting.

Annual General Meeting 2025

The 2025 annual general meeting was held on 22 May 2025. At the annual general meeting, 52.4 percent of the total votes were represented. The lawyer Mårten Steen was elected chairman of the meeting. At the meeting, the following decisions were made:

- Adoption of the income statement and balance sheet for the company and the group for the financial year 2024, as well as resolution on distribution of loss
- Discharge from liability for the members of the board of directors and the CEO for the financial year 2024
- Re-election of board members Gisela Sitbon (chairman), Mattias Bengtsson, Thomas Eldered, Anders Rabbe and Lena Torlegård.
- Board member Alexandra Blomberg Montgomery had declined re-election.
- Re-election of BDO as auditors, with Niclas Nordström as auditor-in-charge
- Determination of fees to the board of directors and auditors
- Resolution on approval of the remuneration report for the financial year 2024
- Authorization to issue shares with a maximum of twenty (20) percent of the total share capital in the company prior to completion of the issue

Complete minutes and information from the AGM are available on nanologica.com/general-meetings.

Annual General Meeting 2026

The 2026 annual general meeting is planned to be held in Stockholm on May 21. Notice of the meeting will be published on the company's website www.nanologica.com where the minutes from the annual general meeting will also be published after the meeting.

Nomination committee

The nomination committee for the 2026 annual general meeting has been appointed in accordance with the Code and the principles adopted by the 2024 annual general meeting regarding the nomination committee. Nanologica's three largest shareholders as of September 30, 2025, has been offered to appoint one member each, whereby the nomination committee for Nanologica AB's annual general meeting 2025 consists of the following three members:

- Carl-Johan Spak (Flerie Invest AB)
- Niklas Sjöblom (Konstakademiens stiftelser)
- Kalle Olby (Vega Bianca AB)

The nomination committee together represents 53.0 percent of the voting rights of all voting shares in Nanologica AB as of September 30, 2025.

The nomination committee's task is to prepare and present proposals for the election of the chairman of the board and other board members, board fees and fees for committee work, election of auditors (if applicable) and auditors' fees (if applicable), as well as proposals for principles that shall apply to the composition and work of the nomination committee for the next annual general meeting. The proposals will be published no later than in connection with the notice of the 2026 annual general meeting.

The nomination committee shall, when preparing proposals for matters for the annual general meeting, comply with the provisions of the Code. When preparing the proposal regarding the election of Board members and chairman of the board, the nomination committee shall apply item 4.1 of the Code as a diversity policy. The nomination committee shall, in connection with its assignment, otherwise perform the tasks that are incumbent on the nomination committee according to the Code.

The nomination committee shall meet as often as necessary for the nomination committee to be able to fulfil its tasks, but at least once a year. No remuneration shall be paid to the members for their work in the nomination committee.

External auditors

The external audit of the parent company's and the group's financial statements, as well as the work of the board of directors and the CEO, is carried out in accordance with generally accepted accounting principles in Sweden. The auditor participates in at least one board meeting per year and leads a discussion with the board without the presence of the CEO or any other senior executive.

The auditor's reporting to the owners takes place at the Annual General Meeting through the auditor's report. The auditor's report shall contain an opinion on whether the annual report has been prepared in accordance with applicable law on annual accounts. In particular, the statement shall state whether the annual report gives a true and

fair view of the company's results and position and whether the board of directors' report is consistent with the other parts of the annual report. The auditor shall also report whether a member of the board of directors or the Chief Executive Officer has taken any action or been guilty of any negligence that may give rise to liability for compensation.

According to Nanologica's Articles of Association, the company must have an authorized public accountant or a registered auditing firm as an external auditor. Since the 2020 annual general meeting, the auditing firm BDO Mälardalen AB has been the auditor with the authorized public accountant Niclas Nordström as the auditor in charge. For information on fees to the auditors, see note 6.

The board of directors

The tasks of the board of directors

The board of directors is the company's second highest decision-making body after the annual general meeting. The board of directors bears the ultimate responsibility for the organization and management of the company's operations, which shall be conducted in the interests of the company and all shareholders.

Some of the board's main tasks are to manage strategic issues regarding the operations, financing, establishments, growth, earnings, and financial position, and to continuously evaluate the company's financial situation. The board of directors shall also ensure that there are effective systems for monitoring and controlling the operations and ensure that the company's provision of information is characterized by transparency and contains accurate, relevant and reliable information.

Composition of the board of directors

According to the articles of association, the board of directors shall consist of at least three and not more than nine members with a maximum of three deputies. At the end of the year, the board of directors consisted of five members without

deputies. The members are normally elected annually at the annual general meeting for the period until the end of the next annual general meeting. At an extraordinary general meeting in March 2026, the number of board members was increased to six.

Chairman of the board

The chairman's main tasks are to lead the board's work and to ensure that this work is carried out efficiently and that the board fulfills its obligations and commitments. In its role, the chairman of the board shall, among other things, create the best possible conditions for the board's work and ensure that the board receives satisfactory information and decision support for its work. The chairman of the board shall also be responsible for contacts with shareholders in ownership matters and for conveying the views of the owners to the board of directors.

Working methods of the board of directors

The board of directors follows written rules of procedure that are reviewed annually and adopted at the inaugural board meeting held in connection with the annual general meeting. The rules of procedure regulate, among other things, the board's working methods, duties and meeting arrangements, the duties of the chairman of the board, the order of decision-making within the company, and the division of duties between the board of directors and the CEO. Instructions for the CEO, certification instructions and instructions for financial reporting are also determined in connection with the inaugural board meeting.

The board of directors meet according to an annual schedule and on an annual cycle established by the board of directors at the inaugural board meeting in connection with the annual general meeting. If necessary, extraordinary decisions are made through extraordinary board meetings, such as any decisions on acquisitions or divestments, investment decisions, financing decisions and decisions on structural or organizational issues.

The CEO and the CFO are present at all board meetings, except on occasions when the board of directors has an individual reconciliation, when the CEO is evaluated by the board of directors, or when the board meets with the company's auditor without the presence of the company's management. The CFO serves as secretary of the board. Other senior executives participate in connection with specific issues.

Board of directors 2025

In 2025, Nanologica's board of directors consisted of: Gisela Sitbon (chairman), Mattias Bengtsson, Alexandra Blomberg Montgomery, Thomas Eldered, Anders Rabbe and Lena Torlegård. Before the AGM 2025, Alexandra Blomberg Montgomery declined re-election. For more information about the board, see page 39–40 or visit www.nanologica.com.

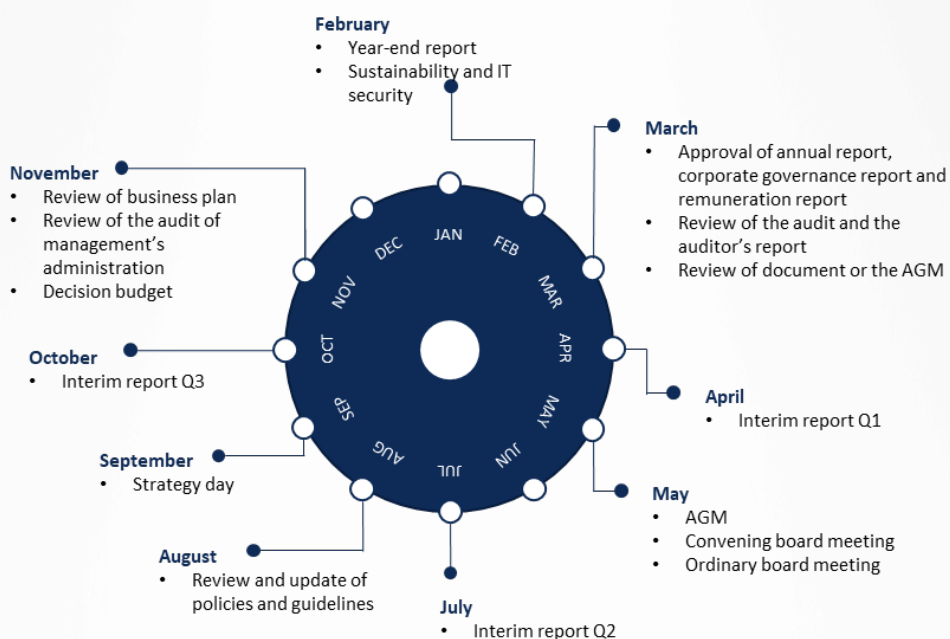

The work of the board of directors 2025

The board has a number of scheduled meetings during the year with standing decision items as well as specific decisions for each meeting, which are summarized in the image on the next page. In addition, there may be meetings for other matters that arise.

In 2025, the board held 6 ordinary board meetings. The board of directors also made decisions per capsulam on 5 occasions to approve the interim report, as well as for decision on the board's statement regarding the mandatory bid from Flerie Invest. Attendance, remuneration and independence of the board members are shown on the next page.

Evaluation of the board's work

According to the Code, the board of directors shall evaluate its work annually using a systematic and structured process in order to develop the board's working methods and efficiency. The board's work has been evaluated by the board members anonymously answering a number of questions about the board's operations.

The results of the evaluation have been compiled and reported both orally and in writing (anonymized) to the board members and to the nomination committee.

Board committees

Nanologica's board of directors has two committees – an audit committee and a remuneration committee – which are described in more detail below. Minutes are kept at all committee meetings and the minutes are reported in connection with board meetings.

Audit committee

The audit committee is appointed by the board of directors and in 2025 consisted of Lena Torlegård (Chairman), Thomas Elderred and Anders Rabbe.

The audit committee's primary task is to support the board in its work to fulfil its responsibility for financial reporting, including accounting, internal control, internal audits and risk management.

The audit committee is also in regular contact with the company's auditor and stays informed and active in decisions relating to financial issues, risks, interim reports and annual reports, as well as internal control. The audit committee is responsible for reviewing and evaluating the auditor's work and shall assist in the preparation of proposals for the annual general meeting's resolution on the election of auditors. The chairman of the audit committee shall report on what has been discussed during the committee's meetings at board meetings.

| Board member | Position | Instated | Independent in relation to | | Remuneration ¹⁾ | | | | Attendance ²⁾ | | |
|-------------------------------|-----------------|----------|----------------------------|---------------------|----------------------------|-----------------|------------------------|---------|--------------------------|-----------------|------------------------|

1) Fees resolved by the Annual General Meeting on 16 May 2024 (period Jan-May 2025) and 22 May 2025 (period Jun-Dec 2025)

2) Total number of appointments, excluding per capsulam appointments. Attended vs. total number of meetings.

Remuneration committee

The remuneration committee is appointed by the board of directors and in 2024 consisted of Gisela Sitbon (Chairman), and Mattias Bengtsson. The remuneration committee's primary task is to prepare the board's decisions on matters relating to remuneration principles, including the preparation of proposals for the annual general meeting's resolution on remuneration to the CEO, principles for remuneration and other terms of employment for the management team, as well as follow-up and evaluation of variable remuneration and long-term incentive programs.

CEO and management

The CEO is appointed by the board of directors and is responsible for the day-to-day management in accordance with the board's guidelines and instructions. The CEO is responsible for keeping the board of directors informed about the company's development and for reporting material deviations from established business plans and events that have a major impact on the company's development or operations.

The CEO is also responsible for producing relevant decision-making documents for the board of

directors, for example regarding establishments, investments, and other strategic issues.

The CEO attends and reports at all board meetings, except on occasions when the CEO is evaluated by the board of directors and when the board of directors meets with the company's auditor without the presence of the company's management. The CEO, Andreas Bhagwani, appoints the other members of the executive management.

At the end of the year, the company's management consisted of Andreas Bhagwani (Chief Executive Officer), Eva Osterman (Chief Financial Officer), Åsa Bergström (Chief Operating Officer) and Katarina Alenäs (SVP Chromatography). For more information on the current group management team, see page 41.

Guidelines for remuneration to the CEO and other senior executives were adopted by the 2023 annual general meeting and remain in force until further notice. These are described in note 7. The application of these guidelines is described in the remuneration report for 2025, which is published on the company's website.

THE BOARD OF DIRECTORS

Gisela Sitbon (1958)
Board member since 2012,
Chairman since 2014

Education: PhD in Medical Sciences from Karolinska Institute in Solna

Main experience: Gisela Sitbon has over 25 years of experience from the life science industry, of which more than ten years in senior positions (including CEO) at Professional Genetics Laboratory AB and five years as section manager at Karo Bio AB.

Other assignments: Chairman of the board of Gradientech AB, Emplicure AB, Emplicure Consumer AB och Emplicure Pharma AB. Board member of Uppsala universitet Invest AB, Thioredoxin Systems AB and Sitbon Bioscience Partner Zenz AB.

Total shareholdings (own and related parties): 360,002 shares privately and through the company Sitbon Bioscience Partner Zenz AB.

Independence to the company and the company's management: Yes

Independence to the main owners: Yes

Mattias Bengtsson (1969)
Board member since 2019

Education: Master of Science in Chemical Engineering at Chalmers University of Technology, MBA from the School of Business, Economics and Law in Gothenburg

Main experience: Mattias Bengtsson has more than 20 years of experience from the chemical and life science industry. He has held senior positions within AkzoNobel, more specifically in industrial purification of pharmaceuticals, for example as General Manager Kromasil and Fine Chemicals, Global Sales and Marketing Manager, Manufacturing Manager and Product Category Manager. In addition, Mattias has held several positions in process chemistry at AstraZeneca in Södertälje, and has been the CEO of Biolin Scientific AB.

Other assignments: Business Unit Manager BioMedical & Research AddLife AB. Chairman of the board of Bergman Labora AB, LabRobot Products AB, Biolin Scientific AB BioCat GmbH, and BioConnect. Board member of Holm&Halby AS and EuroClone Spa.

Total shareholdings (own and related parties): 470,444 shares.

Independence to the company and the company's management: Yes

Independence to the main owners: Yes

Thomas Eldered (1960)
Board member since 2021

Education: Master of Science in Industrial Economics, Linköping University of Technology

Main experience: Thomas Eldered is co-founder of Recipharm AB where he also worked as CEO between 2008–2021. Prior to that, Thomas held various positions at Pharmacia.

Other assignments: Chairman of the board or board member of Flerie AB and several of Flerie AB's portfolio companies, and board member T&M Förvaltning AB, T&M Participation AB, and other private companies.

Total shareholding (own and related parties): 163,358,321 shares through Flerie Invest AB.

Independence to the company and the company's management: Yes

Independence to the main owners: No

Anders Rabbe (1970)
Board member since 2020

Education: Bachelor's Degree in Business and Administration with emphasis in Economics from Webster University, Geneva

Main experience: Anders Rabbe has been CEO of several companies in the biotechnology and financial sector, including Isofol Medical (publ) and WntResearch AB (publ).

Other assignments: CEO of Mindforce Game Lab AB. Board member of Investmentaktiebolaget Akkumula, Albonja AB, Epicyt Pharma AB, and Särö GC.

Total shareholding (own and related parties): 144,587 shares through Investmentaktiebolaget Akkumula.

Independence to the company and the company's management: Yes

Independence to the main owners: Yes

Lena Torlegård (1963)
Board member since 2014

Education: Bachelor of Science in Business Administration from Stockholm School of Economics

Main experience: Lena Torlegård has over 20 years of experience as a communications consultant for a large number of companies, including companies in the life science industry, as well as many years of experience as a board member of listed companies. Lena works as an independent advisor in financial and corporate communication through Lena Torlegård AB.

Other assignments: Communications consultant and board member of Lena Torlegård AB.

Total shareholdings (own and related parties): 168,074 shares

Independence to the company and the company's management: Yes

Independence to the main owners: Yes

Jeremie Trochu (1981)
Board member since 2026

Education: Master's degree in Business Administration from EMLyon, France

Main experience: Jeremie Trochu has extensive knowledge in the life sciences sector and CDMO industry, with 20 years of experience in successfully building and growing companies globally and leading large-scale transformations. Jeremie was previously part of the team that helped transform Catalent from a private equity spin-off to a publicly traded global CDMO and during his tenure there, he built and operated new businesses in both small and large molecule development and analysis markets, as well as leading successful acquisitions and integration of multiple companies.

Other assignments: CEO of Ardena Holding N.V.

Total shareholdings (own and related parties): 21,453,780 shares through Ardena Sweden AB.

Independence to the company and the company's management: Yes

Independence to the main owners: Yes

GROUP MANAGEMENT TEAM

Andreas Bhagwani (1975)
Chief Executive Officer Nanologica since 2011

Education: EMBA from Stockholm School of Economics, studies in agronomy, Swedish University of Agricultural Sciences in Uppsala

Main experience: Andreas Bhagwani is the co-founder of several companies, most recently Sigrid Therapeutics AB (treatment for obesity) and Atrogi AB (diabetes). Andreas has worked as a management consultant for more than 10 years, with sales and leadership as a focus. In addition to the companies above, he is the co-founder of Kichisaga Leadership, GenderTimer and HIGS.

Other assignments: Board member and owner of Vega Bianca AB. CEO and board member of Nanologica Black AB, Nanologica Yellow AB and Nanghavi AB, board member of Syntagon AB, deputy board member and owner of Kichisaga Leadership AB.

Total shareholdings (own and related parties): 11,534,528 shares through Vega Bianca AB and 75,000 warrants (of the serie 2023/2026).

Annette Roos (1978)
Chief Executive Officer Syntagon since 2026

Education: Master of Science in Chemistry från Åbo Akademi, Finland.

Main experience: Annette has extensive experience from the life science industry and more than 20 years in senior positions in development, production and contract services from both smaller specialist companies and larger international organizations. Annette started her career at Syntagon where she worked from 2000 to 2012 with development, process chemistry and leadership in a growing CDMO environment. Since then, she has held senior roles at NNE Pharmaplan, Dfind Science & Engineering and APL. She has most recently been CEO of Ardena Sweden and Ardena Södertälje, where she has had operational responsibility for the operations of the subsidiaries Ardena Södertälje and Ardena Riga for five years.

Other assignments: Board member of Syntagon AB,

Total shareholdings (own and related parties): -

Eva Osterman (1971)
Chief Financial Officer since 2017

Education: Master of Science in Business Administration and Economics from Uppsala University.

Main experience: Eva Osterman has many years of experience from the finance side of major companies Lantmännen and PwC, where Eva has worked with, among other things, business controlling, financial controlling, reporting and internal audit. She also has many years of experience from major international groups in the pharmaceutical industry, such as AstraZeneca.

Other assignments: Board member of Syntagon AB, deputy board member of Nanghavi AB, Nanologica Black AB and Nanologica Yellow AB. CEO and chairman of the board of CetreO AB. Auditor of Rangsta Båtklubb.

Total shareholdings (own and related parties): 53,283 shares and 40,000 arrants (of the series 2023/2026).

INTERNAL CONTROL

The purpose of internal control regarding financial reporting is to ensure that the financial reporting is reliable and that the financial statements are prepared in accordance with generally accepted accounting principles and otherwise comply with applicable laws and regulations that apply to stock market companies.

In accordance with the Swedish Companies Act and the Swedish Code of Corporate Governance (the Code), the board of directors is ultimately responsible for structuring the company's organization so that financial reporting, administration, and operations are monitored and controlled satisfactorily. The board of directors shall, among other things, ensure that Nanologica has adequate internal control and formal procedures that ensure that established principles for financial reporting and internal control are followed and that there are appropriate systems for monitoring and controlling the company's operations as well as the risks associated with the company and its operations.

In addition to the board of directors, the internal control processes are carried out by the audit committee, the CEO, senior executives, and other employees. The division of responsibilities between the board of directors, audit committees, the CEO and management is set out in established rules of procedure and instructions. The audit committee shall support the board of directors in its work to fulfil its responsibility for financial reporting, including accounting, internal control, and risk management.

The overall purpose of internal control is to ensure, to a reasonable extent, that the business strategies, objectives, and defined risks are monitored and that the owners' investments are protected. Furthermore, internal control shall ensure, with reasonable certainty, that the external financial reporting is reliable and

prepared in accordance with generally accepted accounting principles in Sweden, that applicable laws and regulations are followed and that the requirements imposed on listed companies are met.

Nanologica's CEO is ultimately responsible for overseeing that the work on the internal control is carried out in accordance with the form decided by the board of directors. Nanologica's finance department, led by the CFO, leads the group's work with internal control regarding financial reporting.

Since 2019, internal control has been conducted in accordance with the internationally accepted internal control framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), which mainly covers the following five areas: control environment, risk assessment, control activities, information and communication, and monitoring and follow-up. These areas are described in more detail below.

Control environment

The control environment forms the basis for internal control of financial reporting. It is important to clearly define and communicate decision-making paths, authority, and responsibilities in the organization, and that governing documents in the form of internal policies, guidelines and manuals are made available.

The board of directors has the overall responsibility for the company's processes for internal control and for establishing a control environment consisting of written policies, guidelines and instructions that serve as a basis for decision-making and support for management and other employees. The CEO is responsible for the preparation of the documents. The board of

directors has established rules of procedure that regulate the board's responsibilities and how the board's work in committees shall take place. Within the board of directors, an audit committee has been established, the task of which is to ensure that established principles for financial reporting and internal control are complied with and further developed, as well as to maintain ongoing relations with the company's auditors and to review and monitor the auditor's impartiality and independence.

To maintain good internal control, the board of directors has adopted a number of steering documents. These include the following governing documents and policies in which governing documents for accounting and financial reporting are areas that are particularly important for ensuring full and accurate reporting and disclosure:

- Rules of procedure for the board of directors including instructions for the board's committee
- CEO instruction
- Instructions for financial reporting
- Code of Conduct
- Authorization instruction
- Financial policy
- Risk policy
- Information policy
- Whistleblower policy

The financial handbook is another important steering document that describes processes and routines for the accounting function. In addition to the internal control described above, there is also internal activity-specific control of data regarding production and development, as well as quality control systems, including systematic monitoring and evaluation of the company's research and manufacturing work and products.

All policies and procedures as well as the financial handbook are available on the company's intranet.

Risk assessment

The board of directors is responsible for identifying and managing significant financial risks and risks of errors in financial reporting. This includes identifying areas of financial reporting with an increased risk of material errors and designing control systems to prevent and detect these errors. The management team identifies points in financial reporting and in administrative flows that are specifically relevant and subject to routine testing. The financial risks are regularly managed, assessed, and reported to the audit committee and the board of directors.

Control activities

The control activities aim to ensure that the financial reporting is accurate and complete and are based on the group's requirements for internal control regarding the financial reporting. Nanologica's control structure consists of an organization with clear roles that facilitate an efficient and appropriate division of responsibilities, as well as specific control activities to detect or prevent risks of errors in reporting. Control activities include, for example, account reconciliations and balance sheet specifications, approval of bank transactions and cooperation agreements, proxy and certificate instructions, and accounting and valuation principles. Random checks are also carried out on a regular basis. The board of directors continuously monitors the development of operations through monthly report packages containing detailed financial information, the CEO's comments on the business, as well as results and financial position. Furthermore, the board of directors approves all external financial reports prior to publication.

Information and communication

The company has established information and communication channels regarding risks and internal controls that enable reporting and feedback from operations to the board and management and that help ensure that the right business decisions are made. Governing documents in the form of policies, financial manuals, guidelines (and manuals relating to financial reporting) are communicated primarily on the company's intranet. Particularly important policies are communicated annually to all affected

employees. The financial handbook is expanded as needed and is routinely updated. Internal communication on financial reporting and follow-up takes place mainly in the accounting function. Issues related to financial reporting are also discussed at meetings where relevant working groups meet.

To ensure that external information is accurate and complete, the board of directors has established an information policy that specifies what should be communicated externally, by whom, and in what way the information is to be made public.

The company's financial reporting complies with the laws and regulations that apply in Sweden and, in the case of the subsidiaries, the local rules in each country where operations are conducted. Information to shareholders and other stakeholders is provided through the annual report, interim reports, and press releases.

Monitoring and follow-up

The board of directors' monitoring and follow-up of internal control regarding financial reporting is primarily handled through the audit committee. The observations and potential areas for improvement regarding internal control identified in the external audit are reviewed by the audit committee together with the external auditors and the CFO.

The CEO ensures that the board and the company management are regularly informed about how the business is conducted. Internal control work supports the board of directors and company management in their work to assess and evaluate significant risk areas in financial reporting and to design initiatives and follow-up measures in selected areas.

Follow-up that the controls are efficient and relevant is done at several levels, by the board, by the management, and by the employees. The tests are carried out, among other things, through process review, random checks, and verification that documents are signed by the competent authorities. These checks are carried out both on a regular basis, such as in financial statements, as event-based checks such as when purchasing, and as random testing such as random sampling.

The board of directors has assessed that the need for a special audit function (internal audit) is currently not justified. The need for a separate internal audit function is reassessed annually. The board of directors currently considers that the monitoring, documentation and review of the company's internal control that is currently carried out by the board of directors and the audit committee is adequate in relation to the scope of operations and existing internal control structures.

The company's external auditors review the financial year in full.

BOARD OF DIRECTORS REPORT

The board of directors and CEO of Nanologica AB (publ), 556664–5023, hereby submit the annual report for the financial year 2025.

General information

The parent company Nanologica AB is a limited liability company with its registered office in Stockholm. The address of the head office is Forskargatan 20 G, SE-151 36 Södertälje, Sweden. The group's main business is production and sales of chromatography products.

Group structure

Nanologica AB has four subsidiaries: Nanghavi AB, Nanologica Black AB, Nanologica Yellow AB and Nlab Bioscience SA. Nanologica Bioscience SA is in the process of being liquidated. Other subsidiaries are dormant at the time of publication of the report. After the end of the year, Syntagon AB was added as a subsidiary.

Nature and focus of operations

Nanologica is a Swedish life science tools company that develops, manufactures, and sells advanced consumables to pharmaceutical manufacturing companies. With a foundation in materials science and nanotechnology, the company has developed products and an expertise in chromatography, an analysis and purification technology. Nanologica's products are mainly used to purify pharmaceuticals during production using a purification technique called preparative chromatography. The company's silica-based purification media, NLAB Saga[®], is specially developed for the purification of peptide drugs, such as insulin and GLP-1 analogues.

A proprietary production method allows the company to precisely control the shape, size, porosity, and surface properties of silica particles, which provides opportunities to create high-

quality chromatography products. Thanks to their efficient and long-lasting purification, they can increase productivity and reduce costs for pharmaceutical manufacturers.

Development of the business 2025

During the spring, equipment was replaced in one of the production stages of the company's large-scale production of silica. The first products produced with the new equipment were delayed, from mid-year to early September, which had a negative impact on the company's sales opportunities. However, the commissioning of new equipment was successful and has resulted in both increased yield and faster lead times for the process step. The measure is expected to result in significantly higher production volumes than before and means that the company now describes production as stable.

During the year, the company has received several orders from both returning customers and new customers. At the beginning of the fourth quarter, the first order was received for evaluation of NLAB Saga[®] on a production scale in insulin manufacturing, the market for which the company initially developed its preparative chromatography business before GLP-1 analogues became widely available as weight loss drugs. The order shows that the company has the opportunity to find a market for both variants of its main product.

During the year, the first order was also received for NLAB Saga[®] in the US market, which is considered to be an important market going forward for the company as the price level there is higher than in Asia, as well as the fact that several

development projects for new incretin drugs are being conducted there.

At the end of September, NLAB® Idun was launched, an ion exchange chromatography media that is a complement to NLAB Saga® in the purification of peptide-based drugs. The company can thus offer customers a complete workflow for purification of peptide-based drugs. This is expected to strengthen the company's brand in the chromatography market and is expected to provide a valuable revenue addition for the company in the long term.

At the end of the year, the first chromatography products from the company's development program for further applications were sold. The purpose of the program is to broaden the product portfolio. The program is in an early stage, but in the long term it has the potential to generate additional revenue streams for the company.

Significant events after the end of the financial year

- Nanologica acquired the Södertälje-based contract manufacturer Ardena Södertälje AB. The purchase price amounted to appx. SEK 8.6 million and was paid in the form of newly issued shares in Nanologica. The acquired company will be operated as an independent wholly-owned subsidiary within the Nanologica Group under the name Syntagon AB. The purpose of the acquisition is to strengthen Nanologica's capacity and expertise in production and to accelerate the company's growth. The acquisition is expected to contribute positively to the Group's earnings and cash flow from 2026, and create meaningful operational and commercial synergies.
- On January 30, the board of directors resolved to carry out directed share issues totaling appx. SEK 13.7 million and a rights issue of appx. SEK 82.5 million, subject to approval by an Extraordinary General Meeting on March 4. The Rights Issue was secured to 100 percent by subscription commitments and underwriting commitments and provided the company with

cash and cash equivalents of appx. SEK 38.8 million in addition to the entire outstanding loan from Flerie Invest being offset against shares. The main purpose of the issues is to strengthen the company's financial position and meet the need for working capital for the production and sale of the company's silica media NLAB Saga®, set-off of loans, and payment of the purchase price for the acquisition of Syntagon.

- In April, Nanologica received an order of appx. SEK 2 million for the company's silica-based purification media NLAB Saga® for evaluation on a production scale from a customer in India.

Employees

At the end of the year, the number of permanent employees was 19 (15), of which 14 (10) are women and 5 (5) are men. The average number of employees in 2025 was 17 (15).

In order to run an efficient business with a cost-effective organization, consultants, advisors and project employees are hired for specific assignments and tasks in areas of expertise that the company lacks or only periodically needs. As of December 31, 2025, the number of consultants and project employees amounted to the equivalent of 1 (3.5) full-time positions.

External factors

Wars and geopolitical tensions continue to affect the world. During the year, this has not had any direct impact on the company. However, the high level of uncertainty surrounding the impact of the geopolitical situation on the global economy and supply chain may have an impact in the longer term. This could affect the company's production if the availability of raw materials deteriorates. If the global economy is adversely affected, the company's ability to raise capital may be impaired.

The ongoing trade tensions between the US and other countries have not had any direct impact on the company's operations during the year. The company's assessment is that tariffs have the same impact on all silica suppliers globally since none have production in the US.

The company's loans run at fixed interest rates, which means that the costs for these are not affected by higher interest rates during the term of the loans. After the end of the year, the company's outstanding loans have been repaid in full. Regarding fluctuations in exchange rates, the company's production and commitments are mainly in British pounds and sales mainly in US dollars. Nanologica has not currently hedged any exchange rates.

The company works continuously to identify, evaluate, and manage external factors that have an impact on its operations.

Financial overview

The Group's net sales for the full year increased to SEK 21,127 thousand (14,538). The revenue is mainly attributed to sales of silica for preparative chromatography, but to some extent also to purification media that are not silica-based, as well as sales of analytical columns.

Operating expenses for the year amounted to SEK -68,474 thousand (-92,588). The decrease in costs for 2025 compared with the previous year is partly related to reduced costs for raw materials and partly as a result of a positive valuation of other current assets, where a larger impairment was made in the comparison year 2024.

Operating loss for the year amounted to SEK -46,801 thousand (-59,255). Operating loss was positively impacted by increased sales and reduced operating expenses.

Loss after tax for the year amounted to SEK -51,289 thousand (-65,629).

The company does not currently pay any tax on earnings due to negative earnings.

Financial position and liquidity

Development costs have been capitalized on an ongoing basis as they arise and relate to the development of large-scale production of silica. Capitalized expenditure for development

amounted to SEK 9,464 thousand (15,234) at year-end. Right-of-use assets amounted to SEK 7,450 thousand (11,212), which mainly relate to dedicated equipment at the company's partners for large-scale production of silica.

Inventories amounted to SEK 27,724 thousand (32,745), of which finished goods inventory corresponded to SEK 26,344 thousand (28,807). This is mainly made up of NLAB Saga®, but partly also of NLAB® Siv. Prepaid costs related to production amounted to SEK 30,862 thousand on the balance sheet date, compared to SEK 30,505 thousand at the beginning of the year. This refers to advances to Nanologica's manufacturers for ongoing production of silica. Investments in tangible fixed assets amounted to SEK 3,529 thousand (3,187) on the balance sheet date.

To date, the activities have mainly been financed through equity, Swedish and international research grants, credit facility agreements and corporate loans. In 2025, increased commercialization of the company's products has led to increased sales. The company estimates that sales will increase significantly in 2026. Cash and cash equivalents on the balance sheet date amounted to SEK 3,549 thousand (48,430).

Cash flow from operating activities amounted to SEK -39,880 thousand (-80,734). Total cash flow amounted to SEK -44,175 thousand (38,752). Cash flow from financing activities amounted to SEK -3,213 thousand (120,228).

The Group's reported equity on the balance sheet date amounted to SEK 22,645 thousand compared to SEK 74,112 thousand at the beginning of the year. The parent company's reported equity amounted to SEK 18,342 thousand on the balance sheet date, compared to SEK 68,641 thousand at the beginning of the year.

Taking into account cash and cash equivalents at the balance sheet date, expected revenues, and the issues carried out at the beginning of 2026, the management's and the board's combined

assessment is that the existing working capital is sufficient to operate the company for the coming twelve-month period.

Corporate governance

The company's governance is described in the corporate governance report on pages 30–42. The corporate governance report is also available as a stand-alone excerpt from this annual report on the company's website nanologica.com/corporate-governance-reports.

Remuneration to senior executives

Remuneration to senior executives is reported in the remuneration report, which is available on the company's website nanologica.com/remuneration. The remuneration guidelines are described in note 7.

Future prospects

This report contains forward-looking statements. Actual outcomes may differ from those statements. Internal and external factors can affect Nanologica's results.

As the large-scale production of silica is now stable, the commercialization of NLAB Saga® is expected to be significantly facilitated. The company's opportunities to initiate significantly larger sales with continued sales growth in the coming years are therefore considered to be good.

Multi-year overview

| Amounts in TSEK if nothing else is stated | 2025 | 2024 | 2023 | 2022 | 2021 |

| Total | 13 815 804 |

With regards to earnings and position in general, reference is made to the subsequent income statement and balance sheet with accompanying notes.

RISKS AND UNCERTAINTIES

The company makes assumptions, assessments and estimates that affect the content of the financial statements. Actual results may differ from these estimates and estimates, as is also reflected in the accounting policies. The objective of the group's risk management is to identify, prevent, measure, control and mitigate risks in the business. Material risks are the same for the parent company and the group.

The risks in Nanologica's operations include strategic risks related to, among other things, the company's operations, industry, regulatory risks, financing, commercialization, and external requirements, as well as operational risks such as production risks, price changes of raw materials and inputs, as well as currency fluctuations. These risks may have a material adverse impact on the company's operations, results of operations and financial position.

The company has assessed the risks on the basis of the probability of the risk occurring and the estimated negative effects of the risks if they materialize. The probability of the risk occurring is assessed on a scale of low, medium and high.

Production risks

Nanologica has production facilities in Södertälje and at external manufacturers of both silica-based purification media and non-silica-based purification media. The company does not have its own large-scale production, which means that the company is dependent on an external manufacturer for the production of the amount of purification media needed to meet the demand that arises in relation to the implementation of the company's projects and supply agreements.

In addition, the company's production of silica has certain specific associated risks, such as (i)

problems with the manufacturing process, (ii) equipment problems, and (iii) a shortage of raw materials. There is also a risk that contracted manufacturers do not deliver on time or in accordance with the quality requirements that follow from manufacturing agreement or applicable laws and regulations. Furthermore, costs may be added and prices may increase, which is beyond the company's control. The company intends to make further investments in production equipment in order to increase production speed, production efficiency and production economy to better meet the demand for the company's products in preparative chromatography, as well as to improve the company's margins. There is a risk of delays in the delivery and installation of new production equipment, which may lead to optimization of these parameters not taking place at the pace planned by the company.

All of these risks can lead to production-related delays, interruptions and/or significantly higher costs, which in turn can lead to delays for the company's customers and ultimately lead to financial risks if the company's products cannot be sold at the pace and extent desired by the company.

Estimated probability of the risk occurring: Medium.

Product development and commercialization

The company's core competence lies in developing and manufacturing nanoporous silica particles. It is pivotal for Nanologica's future profitability and financial position that the products that the company develops in chromatography are successfully commercialized. To include materials for preparative chromatography in industrial production is a complex process in the

pharmaceutical industry, and potential customers who manufacture pharmaceuticals place high demands on, among other things, product quality, delivery capacity, competence and long-term perspectives of their suppliers.

Different customers have different test methods and conditions, which means that the company's products may perform more or less well in tests and the products may correspondingly appear more or less attractive to the customer compared to competing products. If the commercialization in chromatography does not meet the company's expectations, it may have a significant impact on the company's continued development.

Estimated probability of the risk occurring: Medium.

Financing and capital requirements

Nanologica has historically generated negative results and the company's cash flows from operating activities have not been sufficient to meet the company's total annual capital needs. The generated cash flow is expected to remain negative until Nanologica achieves significant sales of existing or new products that the company can market.

A continued lack of positive and consistent operational revenue streams may mean that Nanologica will be forced to raise capital in the future. The availability and terms of such capital raises are affected by several factors, including the prevailing economic and investment climate, the current credit market, and the company's creditworthiness and market position. Financing through the issuance of shares or equity-related financial instruments may have significant dilution effects for the company's existing shareholders.

Credit financing may contain restrictive conditions for the use of capital, which may hamper the company's flexibility and operations. There is a risk that the company will not be able to raise the necessary capital to implement an up-to-date business plan, or alternatively that such a capital raise can only take place on unfavorable terms. In

the event that Nanologica is unable to raise the necessary capital, the company's development, manufacturing and sales activities as well as cash flow/liquidity may be adversely affected, which may force the company to limit or suspend planned marketing, development and investment activities until sufficient capital has been secured.

The company is also exposed to other financial and legal risks such as currency risks, disputes and legal proceedings, inadequate insurance cover, and the loss of all or part of the accumulated tax loss or being subject to time-limited blocking rules.

Estimated probability of the risk occurring: Medium.

Dependence on qualified personnel

Nanologica can be regarded as a small organization, measured in both turnover and number of employees and otherwise committed people. The company's success is highly dependent on the extensive expertise and experience of senior executives and key employees. The work of these persons is considered to be of great importance for the company's continued operational and financial development. There is a risk that one or more key employees choose to terminate their employment, which may delay or cause interruptions in various development projects, production or commercialization of the company's products.

Estimated probability of the risk occurring: Medium.

Growth risks

A sudden and sharp increase in demand for the company's products may occur. Such increased demand may require significant business expansion, ultimately through increased production capacity, personnel, and the development of new internal processes, which is expected to place high demands on the company's management and employees. In addition, Nanologica would also need to adjust the operational and financial capacity within the company based on the increased capacity load. In

the event that the company does not meet the above-mentioned need for change in a satisfactory manner, the company risks losing business, for example in the form of potential customers choosing competing products instead. This in itself can affect the return on the company's marketing investments and thus negatively affect the company's sales development, sales and earnings.

Estimated probability of the risk occurring: Medium.

Competition and competing technologies

Nanologica's competitiveness is highly dependent on the company's ability to be at the forefront with a product offering that is on par with current market demand. Research and development in competing companies as well as changes in industries that benefit from the company's products may make the company's products obsolete or less in demand. There is a risk that Nanologica, with its current size and current financial resources, does not have sufficient capacity to compete sustainably and that competitors develop products that are more effective, affordable, qualitative and/or useful than what the company can offer. In addition, competitors may have greater financial resources, higher production and distribution capacities, and better conditions in general to develop and achieve commercial success with their competing products.

Estimated probability of the risk occurring: Low.

Share-related risks

For several years, Nanologica has had a negative cash flow, and it is not unlikely that the company will need additional capital to finance its operations. Nanologica may need to raise additional financing through new issues, equity-linked securities, or convertible debentures, which may result in a dilution of existing shareholders' stake in the company.

As a result of the company's ownership, where Nanologica's three largest shareholders hold over 50 percent of the shares and votes, there is a risk

that investors will not be able to exercise any influence or that the interests of major shareholders are not aligned with those of the company or other shareholders. Such major shareholders could exercise significant influence over Nanologica in a way that does not best promote the interests of other shareholders

The development of Nanologica's share price is dependent on a number of factors, some of which are company-specific, such as the development of sales in preparative chromatography and ongoing expansion, and others are tied to the stock market as a whole and which may not necessarily be related to the company's underlying value. Potential investors should take into account that an investment in the company's shares is associated with risk and that the shares may both increase and decrease in value. The company also plans to invest its financial resources in development and in building a commercial organization. At present, the company therefore has no intention of paying dividends to shareholders.

Estimated probability of the risks relating to the company's share occur: Medium.

External factors

Wars and geopolitical tensions continue to affect the world. During the year, this has not had any direct impact on the company. However, the high level of uncertainty surrounding the impact on the global economy and global supply chain of the geopolitical situation may have an impact in the longer term. This could affect the company's production if the availability of raw materials deteriorates. If the global economy is adversely affected, the company's ability to raise capital may be impaired.

The ongoing trade tensions between the United States and other countries have not had any direct impact on the company's operations during the year. The company's assessment is that tariffs have the same impact on all silica suppliers globally since none have production in the US.

Estimated probability of the risk occurring: Low.

Climate risks

Climate change poses a major risk to humanity from a global perspective. Examples of physical climate risks are extreme weather events that can make components and raw materials more unavailable and lead to higher energy prices. Transition risks are risks arising from changes in legislation, changes in demand for products and services, changes in customer behavior or other structural changes that take place with the aim of transitioning to a climate-neutral economy.

Increased demand from investors for an increased sustainability focus for companies may also constitute significant factors. In addition, environmental policy decisions can affect the company in the form of increased taxes or necessary investments. At present, Nanologica assesses that climate risks do not have, or in the near future will have, a material impact on the company's financial performance.

Estimated probability of the risk occurring: Low.

Risk management

Nanologica works continuously with risk assessment and management in order to prevent, mitigate, and limit events that may adversely affect the business. Risk analysis and a risk management plan are carried out on an ongoing basis for individual projects as well as for the company as a whole. Possible events and scenarios that could negatively affect the company's operations are compiled and evaluated in a risk matrix. Linked to the risk matrix and each individual risk, risk mitigation measures are described with the aim of counteracting, limiting, controlling and managing the risk.

The company's management team works continuously to identify, evaluate and limit risks in the operational activities. The management team reviews the current risk matrix on a monthly basis to ensure adequate risk management. On an annual basis, the company's risks are considered and evaluated by the board of directors, where the audit committee is responsible for preparing documentation.

The factory for large-scale production of silica in Newcastle, Great Britain

NANOLOGICA

NOTES
TO THE FINANCIAL STATEMENTS

NOTE 1 ACCOUNTING PRINCIPLES

The main accounting principles applied in the preparation of these consolidated financial statements are set out below. These principles have been applied consistently for all years presented, unless otherwise stated.

General

This annual report covers the Swedish parent company Nanologica AB (publ), corporate identity number 556664–5023, and its subsidiaries. The parent company is a limited liability company registered in and with its registered office in Stockholm, Sweden. The address of the head office is Forskargatan 20 G, 151 36 Södertälje. The main operations of the group are the production and sales of silica-based products for chromatography.

Fiscal year

The financial statements for the financial year from 1 January to 31 December 2024 include financial information for the parent company and its subsidiaries (collectively, the "group" and each a "group company"). The annual report and the consolidated financial statements have been approved for publication on March 28, 2025, in accordance with the decision of the board of directors on March 27, 2025. The income statements and balance sheets of the group and the parent company will be subject to adoption at the Annual General Meeting on 22 May 2025.

Disclosures regarding changes in the group structure

Note M8 provides an overview of the Nanologica group and a specification of all group companies. No changes have been made to the structure or operations of each group company.

Compliance with legislation and accounting standards

The consolidated financial statements have been prepared in accordance with the International Financial Reporting Standards (IFRS) issued by the International Accounting Standards Board (IASB), as well as the interpretative opinions of the International Financial Reporting Interpretations Committee (IFRIC) adopted by the European Commission for application in the EU, with additional requirements in the Annual Accounts Act. The standards and interpretative statements applied are those in force and adopted by the EU on 1 January 2025. Furthermore, the Financial Reporting Council's recommendation RFR 1, Supplementary accounting rules for groups, has been applied.

New and amended standards and interpretations that have not yet been applied by the group

With the exception of IFRS 18, the group believes that changes in standards and interpretations will not have a material effect on the financial statements. IFRS 18 Presentation and Disclosure in Financial Statements replaces IAS 1 Presentation and Disclosure in Financial Statements.

IFRS 18 sets out new requirements for how financial statements are presented, with a particular focus on:

- Income statement: Requirements for certain mandatory subtotals are introduced as operating profit. Income and expenses will be classified in the income statement into five categories: operating activities, financing, investment, income tax, and discontinued operations
- Aggregation and disaggregation of information, including the introduction of overarching principles on how information should be aggregated and disaggregated in the financial statements;
- Disclosures of key performance measures (Management Defined Performance Measures, MPMs) shall be provided in a single note, with reconciliations to the nearest IFRS-compliant subtotal.

IFRS 18 will enter into force for accounting periods beginning on or after January 1, 2027 with earlier application permitted. Companies will need to recalculate comparison periods. With regard to IFRS 18, the group has not yet evaluated its effect on the group's financial reporting. IFRS 18 will have no impact on the accounting and measurement of the group's transactions, but will only affect the group's presentation of the financial statements, including the financial statements and notes. IFRS 18 may also affect the key performance indicators presented and how they are calculated.

Guidelines for alternative performance measures

In accordance with ESMA's (European Securities and Markets Authority) guidelines on alternative performance measures, additional information on the use of alternative performance measures, including explanations of use and reconciliation of the performance measures against the most directly reconcilable IFRS items in the financial statements, has been included in the financial statements. Alternative performance measures presented in the financial statements should not be considered as a substitute for IFRS terms and concepts and need not be comparable to similar performance measures of other entities.

Main operations

The group's business consists primarily of the development, manufacture, and sale of silica-based products for chromatography and other advanced consumables and services to pharmaceutical manufacturing companies. The most important markets are countries in Asia, but also Europe and the United States.

Basis for accounting

Assets and liabilities are reported at historical cost except for certain financial assets and liabilities that are measured at fair value in accordance with the accounting principles set out below. All amounts are, unless otherwise stated, rounded to the nearest thousand kronor. The preparation of the financial statements in accordance with IFRS requires management to make certain critical estimates and assumptions that affect the carrying amounts of assets, liabilities, income and expenses.

The estimates and assumptions are based on past experience and a number of other factors that can be assumed to be reasonable under the current conditions. The results of these estimates and assumptions are then used to assess the carrying amounts of assets and liabilities that cannot be easily determined from other sources. The actual outcome may differ from these estimates and assumptions. The estimates and assumptions are reviewed regularly. Changes in estimates are reported in the period in which the change is made if the change only affects this period. If the changes also relate to future periods, these are reported both in the period in which the change is made and in future periods.

Note 2 describes the assessments made in the application of IFRS that have a significant impact on the financial statements, as well as the estimates that may entail material adjustments in the financial statements for the following year. Unless otherwise stated below, the group's accounting principles have been consistently applied to all periods presented in the group's financial statements.

Classification

Non-current assets consist of things that are expected to be recovered or settled later than twelve months from the balance sheet date. Current assets consist of amounts that are expected to be recovered or settled within twelve months from the balance sheet date. Long-term liabilities consist of amounts that the group has an unconditional right to choose to pay later than twelve months after the end of the reporting period at the balance sheet date. If the group does not have such a right at the balance sheet date, or if the liability is expected to be settled within a normal operating cycle, the liability is recognized as a short-term liability.

Consolidation principles

Group structure

All formed and acquired companies are wholly owned, directly by Nanologica AB (publ) and are consolidated from the date on which controlling interest is transferred.

Subsidiary

The consolidated financial statements include the financial information for Nanologica AB (publ) and all subsidiaries. Subsidiaries are all companies that Nanologica AB (publ) controls directly or indirectly. Control is achieved when the group has responsibility for and the right to its variable return through its involvement in the company, as well as the ability to influence this return through its influence over the company. All subsidiaries are consolidated from the date Nanologica AB (publ) acquires controlling interest. In cases where the group acquires subsidiaries, the acquisition method for accounting for business combinations is applied.

The group companies cease to be consolidated from the date on which control ceases. When the group ceases to have a controlling interest, any remaining holdings are revalued at fair value at the time when controlling interest ceases, which is recognized as a change in the value of the income statement. An overview of all consolidated group companies for Nanologica AB (publ) can be found in Note M8.

Transactions eliminated during consolidation

Intercompany transactions, balance sheet items, income and expenses arising from transactions between group companies are eliminated. Profits and losses resulting from intra-group transactions recognized as assets are also eliminated.

Foreign currency

Functional and reporting currency

Items in the respective group companies' financial information are reported in functional currency in the primary economic environment in which operations are conducted. The functional currency of foreign units is generally the local currency. The parent company's functional currency is Swedish kronor (SEK), which is also the reporting currency for the parent company. The consolidated financial statements are presented in SEK. Assets and liabilities are translated at the rate of the balance sheet date. Income and expenses are translated at the average exchange rate for the year.

Transactions and balance sheet items

Transactions in foreign currency are translated into functional currency at the exchange rates in force on the date of the transaction or the date of revaluation. Currency differences arising in connection with the settlement of such transactions, or when translating exchange rates for monetary assets and liabilities in foreign currencies at the balance sheet date, are recognized in the income statement within operating profit.

Currency differences in cash and cash equivalents and liabilities are reported in the income statement under financial income and financial expenses, respectively.

The group has no loans in foreign currencies and does not apply any hedge accounting for foreign exchange profits and losses related to borrowings.

Basis for accounting

The group has consistently applied the accounting principles to all periods reported in this consolidated financial statement. On next page is a summary of the significant accounting principles and definitions, which are described in more detail on the following pages:

| | | | |
|------|--------------------------------------------------------------------------------------------------------|-------|---------------------------|
| I | Net sales | XIII | Earnings per share |
| II | Changes in inventory | XIV | Intangible assets |

The balance sheet, income statement and cash flow statement contain references to the notes.

REVENUE AND EXPENSE ACCOUNTING

I Net sales

Revenue from agreements with customers

The group reports revenue from sales of goods and distribution agreements. Revenue recognition is carried out in accordance with the five-step model specified in IFRS 15.

Sales of goods

The sales of goods include income from the supply of goods after deduction of discounts and the like, excluding value added tax and after the elimination of intercompany sales. Revenue from the sale of goods is recognized when control of the goods has been transferred to the customer. When selling goods, control is usually transferred to the customer when significant risks and benefits have been transferred, which is usually done according to the terms of delivery. Payment is generally received between 30-90 days from the time the control has been transferred. In some orders, there are short-term advances before the goods are delivered, which are deducted as the goods are recognized as income. Any advances from customers are indebted and deducted as revenue is deducted.

Distribution agreements

These agreements usually consist of a number of components (products in the form of silica, sales rights, marketing services and materials). Since customers cannot benefit from each specific component separately or with other resources available to the customer, the agreements as a whole have been deemed to constitute a performance commitment. Any advances from customers are indebted and deducted as revenue is deducted.

Provision of application and method development services

The provision of services such as application and method development is recognized as revenue over time when the services are performed, as Nanologica performs a service without alternative use and is entitled to compensation for work done. In some cases, there are "up-front fees". These are not treated as payment for a separate commitment but are seen as an upfront payment for development services and are indebted and deducted as services are delivered and revenue is deducted.

The group applies an exception which means that information on remaining performance commitments relating to agreements with a term of less than one year is not disclosed.

II Changes in inventory

Changes in the value of inventories, both purchased externally and internally accrued, cost spent for goods including, where appropriate, write-down of inventories according to the principle of minimum value (cost and net realizable value at the balance sheet date). See more in note 2 regarding calculation of manufacturing costs and valuation of inventories.

III Onerous contracts

The company has paid advances to contract manufacturers for ongoing production. These advances are valued on an ongoing basis against the outcome and expected outcome to see if there are onerous contracts. In cases where there are onerous contracts, the inventory is valued according to the principle of minimum value (cost and net realizable value at the balance sheet date). Read more in note 2 on the assessment of onerous contracts.

IV Capitalized expenditure for development work and similar work

Nanologica AB runs several development projects that are expensed on an ongoing basis. Where projects meet the requirements of IAS 38, these expenses are capitalized on their own in the income statement. See more in note 2 regarding valuation of intangible assets.

V Other income

Other income includes foreign exchange profits, capital gains (profit) on disposals of right-of-use assets, tangible and intangible fixed assets, as well as government subsidies and grants.

Grants received and grants for measures that support liquidity, affect the company's cash flow and compensate for costs, and that affect the company's cash flows and/or earnings are recognized when all conditions for grant have been or will be met. Income from government subsidies and grants that are not subject to future performance requirements is recognized as income when the conditions for receiving the grant have been met and the economic benefits associated with the transaction are likely to accrue to the company, and the income can be reliably calculated. Income from government subsidies and grants associated with requirements for future performance is recognized as income when the performance is carried out and the economic benefits associated with the transaction are likely to accrue to the company and the income can be reliably calculated.

Public contributions are valued at the fair value of the asset received by the company. Grants received before the conditions for recognizing the grant as income have been met are recognized as liabilities.

VI Raw materials and consumables

Raw materials for production, purchases from subcontractors from production, analyses, and other costs that are directly linked to reported income.

VII Other external expenses

Refers to the company's other external costs including external costs for research and development.

VIII Staff costs / remuneration of employees

Employee benefits such as wages and social security costs, holidays, and paid sick leave are reported as employees perform services.

Employee commitments are secured through defined contribution pension plans. Defined contribution pension plans are those plans in which the company's obligation is limited to the contributions the company

has undertaken to pay. In such a case, the size of the employee's pension depends on the contributions paid by the company to the plan or to an insurance company and the return on capital that the contributions provide. Accordingly, it is the employee who bears the current risk and investment risk. The company's obligations regarding contributions to defined contribution plans are recognized as an expense in profit for the year at the rate at which they are earned by employees performing services for the company for a period of time.

Termination benefits

Severance pay is paid when an employment relationship ends before the normal time or when an employee accepts voluntary dismissal in exchange for special remuneration. Costs associated with employee layoffs are recognized as a provision if it results from an entity's decision to terminate an employee's employment prior to the normal time or an employee's decision to accept an offer of voluntary termination in exchange for compensation.

Share-based benefits

The group does not apply any share-based compensation. Incentive programs (purchase of warrants) for employees, senior executives and board members are made at market price. Based on the terms of the option programs, see pages 92–93, the premium on the warrant is determined using the Black-Scholes model.

XIX Depreciation/amortization and write-down of tangible and intangible assets, and right-of-use assets

The company uses straight-line depreciation on all of the company's depreciable assets.

An impairment test is carried out as soon as there is an indication that the reported value of the asset exceeds its economic value.

X Other operating expenses

Other operating expenses include foreign exchange losses, capital gains (losses) on disposals of right-of-use assets, tangible and intangible fixed assets.

Capital gains on disposals are determined by comparing the selling price with the reported amount and are recognized at the disposal of the asset under the other income in the income statement.

XI Financial income and expenses

Interest income and interest expenses on third-party loans are recognized in the profit and loss account when they are incurred according to the effective interest method, which also means that the cost of one-off loan arrangement expenses is accrued over the term of the loan. Interest income and cash and bank expenses, respectively, are recognized in the income statement under other financial income when they arise.

Cash and cash equivalents denominated in foreign currency are converted into functional currencies at the exchange rate on the balance sheet date. Any currency differences are recorded under financial expenses.

XII Tax / deferred tax

Income tax for the period consists of current and deferred tax and is recognized in the income statement. Corporate tax is calculated on profit before tax in the income statement, taking into account non-deductible expenses, non-taxable gains and losses, temporary differences resulting from current local tax legislation, as well as other factors affecting the tax rate, such as changes in valuation reserves, adjustments to tax positions and changes in tax legislation, such as changes or decisions on changes in tax rates.

The current tax expense is calculated using the tax rates and tax rules decided or announced at the balance sheet date in the countries where the company's subsidiaries and associated companies operate and generate taxable earnings.

Deferred tax is recognized, using the balance sheet method, on all temporary differences arising between the tax base of assets and liabilities and their carrying amounts in the consolidated financial statements. Deferred income tax is calculated using tax rates that have been decided or announced at the balance sheet date and that are expected to apply when the relevant deferred tax asset is realized, or the deferred tax liability is settled.

Deferred tax assets on loss deductions are recognized to the extent that it is very likely to be tax surpluses available, against which the deficits can be used.

Deferred taxes relating to temporary differences in holdings in subsidiaries are not recognized as the parent company can in all cases control the timing of the reversal of the temporary differences and it is not considered likely that such a reversal will occur in the foreseeable future.

Deferred tax assets and liabilities are set off when there is a legal right of set-off for current tax assets and liabilities and when the deferred tax assets and liabilities relate to taxes levied by the same tax authority and relate to either the same taxable entity or different taxable entities where there is an intention to settle the balances through net payments.

Positions taken in tax returns regarding situations where applicable tax rules are subject to interpretation are regularly evaluated. Any provisions are made based on the amounts expected to be paid to the respective tax authorities.

Deferred tax is not discounted.

XIII Earnings per share

The calculation of earnings per share is based on the group's profit for the year attributable to the parent company's shareholders and on the weighted average number of shares outstanding during the year. During reported periods, there were no potential ordinary shares that could give rise to dilutive effects, as outstanding options (with the right to subscribe for ordinary shares) are not included in the basis for calculating earnings per share in cases where the company reports a negative result.

PRINCIPLES FOR THE VALUATION OF ASSETS AND LIABILITIES

General

Assets and liabilities are initially accounted for, unless otherwise stated, at the amounts for which they were acquired or that have incurred.

XIV Intangible assets

Estimated economic useful lives of intangible assets:

- Patent 5 years
- Balanced expenditure on development works 5 years

Depreciation method

For all intangible assets, the straight-line depreciation method is used.

Acquisition through internal reprocessing – balanced expenditure on development work

Product development work is divided into a research phase and a development phase. All expenses arising from the company's research phase are recognized as expenses when they are incurred. All development expenses are recognized as an asset if all of the following conditions are met:

- It is technically possible to complete the intangible fixed asset so that it can be used or sold
- The group's intention is to complete the asset
- There are prerequisites for using it or selling the asset
- The asset is expected to generate future economic benefits
- There are necessary and adequate technical, financial, and other resources to complete and complete
- Expenses can be calculated reliably

Directly attributable expenses that are balanced include expenses for staff, remuneration for development services received, as well as direct materials.

After initial recognition, internally generated intangible fixed assets are recognized at cost less accumulated depreciation and any accumulated impairment losses. Depreciation begins when the asset can be used. Capitalized expenses are depreciated linearly over an estimated useful life of 5 years.

Reassessment of useful lives

Estimated useful lives and depreciation methods are reassessed if there is an indication that these have changed compared to the estimate at the previous balance sheet date. The impact of any changes in estimates and judgments is presented in a forward-looking manner. Depreciation begins when the asset can be used.

Removal from the balance sheet

An intangible fixed asset is removed from the balance sheet upon disposal or divestment or when no future economic benefits are expected from the use or disposal/divestment of the asset. The profit or loss arising from the removal of an intangible fixed asset from the balance sheet is the difference between what may have been received, less direct selling expenses, and the reported amount of the asset. This is recognized in the income statement as other operating income or expense.

XV Tangible assets

Tangible assets are reported at historical cost less accumulated depreciation and any impairment losses. The cost consists of the purchase price, directly attributable expenditure for putting the asset in place, and estimated dismantling and disposal expenses. Additional expenditure that meets the asset criterion is included in the reported amount of the asset. Expenditure on current maintenance and repairs is recognized as an expense when incurred.

Depreciation of tangible assets is made on a straight-line basis over the estimated useful life of the asset. Depreciation begins when the asset can be put into use. The group's tangible assets consist of equipment, tools, and installations and the estimated useful life of these amounts to 5–10 years.

Subsidies and grants relating to investments in tangible assets are deducted from the historical cost of the related asset and are reflected in the income statement as part of depreciation.

Capital gains and losses on the disposal of a tangible asset are recognized as other operating income and other operating expenses, respectively.

Impairment of intangible and tangible assets

At each balance sheet date, the company analyzes the reported values of tangible and intangible assets to determine whether there is any indication that these assets have decreased in value. If this is the case, the recoverable amount of the asset is calculated in order to determine the value of a possible impairment loss. When it is not possible to calculate the recoverable amount of an individual asset, the company calculates the recoverable amount of the cash-generating unit to which the asset belongs. An impairment test is also carried out annually on balanced expenses for development works that have not yet been completed.

Recoverable amount is the higher of fair value less selling expenses, and value in use. Fair value less selling expenses is the price that the company expects to be able to obtain in a sale less such costs that are directly attributable to the sale. When calculating value in use, future cash flow is discounted to present value by a pre-tax discount rate that reflects the current market assessment of the time value of money and the risks associated with the asset.

At each balance sheet date, the company makes an assessment of whether previous impairments are no longer justified. If this is the case, the impairment is partially or fully reversed. A reversal of an impairment loss is recognized directly in the income statement.

XVI Right-of-use assets*Leases in which the group is the lessee*

The group has leases for premises, production equipment, and vehicles. The group recognizes all leases (with some exceptions listed below) in the financial position statement as a lease liability for the obligation to pay future fixed lease payments and a right-of-use asset as an expression of the right to use an underlying asset. The lease liability is measured at amortized cost using the effective interest method, which is why lease payments are divided between the amortization of the lease debt and the cost of interest. Lease liabilities are recognized as the present value of remaining lease payments in the financial condition statement and include the following lease payments:

- Fixed fees
- Variable lease payments that depend on an index or price, initially valued using the index or price at the commencement date
- Amounts expected to be paid by the lessee under residual value guarantees or when using a purchase option

Lease payments that will be made for reasonably secure extension options are also included in the valuation of the debt. To calculate the lease debt, the lease payments are discounted with the implicit interest rate of the lease. If this interest rate cannot be easily determined, the marginal loan rate of the lessee is used.

The right-of-use asset is valued at cost and is accounted for in an amount equal to the amount at which the lease liability was originally valued after adjusting for deferred lease payments and initial direct expenses, as well as expenses to restore the asset to the condition prescribed by the terms of the lease. Rights-of-use assets are written off linearly in subsequent periods over the shorter of the useful life and lease term. If the group is reasonably certain to exercise a call option, the right to exercise is written off over the useful life of the underlying asset. The group notes that the current holdings of call options have been exercised in full during the year and makes the assessment that these will continue to be exercised in the coming years.

The group has chosen not to report in the financial position statement leases for which the underlying asset is of low value or with a lease term (including an extension period that the group is reasonably certain to be expected to use) of less than 12 months. The group recognizes lease payments covered by the exemption

rules as a lease cost on a straight-line basis over the lease term. The group has chosen to apply the practical solution that gives a lessee the option of choosing not to separate leasing components from non-leasing components for premises leases and instead to account for each leasing component and non-leasing component as a single leasing component.

The group has identified that part of a supplier agreement, a service and contract manufacturing agreement, constitutes a lease. The agreement contains explicitly identified assets that cannot be used by the supplier other than to manufacture Nanologica's products. The supplier does not have the right to replace the equipment and use other assets to produce the products. In addition, the group has an option to buy out the assets at the end of the agreement which is likely to be exercised. The equipment is recognized as a right-of-use asset in the group. As the group has already paid the supplier for the equipment, no leasing liability is recorded in the balance sheet linked to this asset.

XVII Inventories

Reported inventories consist of raw materials and consumables, semi-finished products and work-in-progress products, as well as finished goods inventories. Inventories are valued at the lowest of the cost of acquisition and net realizable value. The cost is determined using the FIFO (first in, first out) method.

The cost corresponds to the value of the expenses required to acquire or manufacture the goods and to get them to the right place and condition for their intended use. The cost of semi-finished and work-in-progress products as well as finished goods includes materials, labor costs, other direct costs, as well as a fair share of fixed manufacturing overheads (based on normal capacity utilization) and variable manufacturing overheads (based on actual production during the period). When calculating, standard values are used that are updated semi-annually or earlier in cases where production changes so that the estimated manufacturing cost is affected.

Net realizable value is the estimated selling price in the ordinary course of business less directly attributable variable selling expenses and costs for the completion of the products. Write-downs, additions, and releases related to the provisions for obsolete inventory are recognized in the income statement under changes in inventories.

XVIII Financial instruments

The group's financial instruments consist of:

- Accounts receivable
- Cash and cash equivalents
- Amounts owed to credit institutions
- Other long-term financial liabilities (loans)
- Other short-term financial liabilities (loans)
- Accounts payable

The group does not have any derivatives and hedge accounting does not occur.

XIX Financial assets

Recognition and initial valuation

Accounts receivable and issued debt securities are initially recognized as they arise. All other financial assets and financial liabilities are initially recognized in connection with the group's conclusion of an agreement on

the instrument. A financial asset (if it is not an accounts receivable without a significant financing component) or financial liability is initially measured at fair value plus transaction costs directly attributable to its acquisition or issue, for items that are not recognized at fair value through the income statement (FVTPL). An accounts receivable without a significant financing component is initially recognized at the transaction price.

A financial asset is valued at zero and is lifted from the balance sheet when the contractual rights to the cash flows from the asset cease or when the contractual rights to the cash flows are transferred through a transaction, in which the economic benefits and risks associated with ownership of it are transferred. Any remaining or emerging interests in such transferred financial assets are accounted for as a separate asset or liability.

The group's reported financial assets consist mainly of accounts receivable and cash and cash equivalents and to a lesser extent of other receivables. All these non-derivative financial assets are accounted for at amortized cost.

Subsequent valuation and profit or loss, accounting principle

Financial assets at amortized costs consist of accounts receivable, other receivables and cash and cash equivalents. These assets are measured at amortized cost using the effective interest rate method. Interest income, foreign exchange gains and losses and impairment losses are recognized in the income statement. Any gain or loss on depreciation is recognized in the income statement.

Impairment of financial assets

Impairment requirements for accounts receivable are recognized based on the simplified approach using the expected credit losses for the entire remaining life of the contracts. The group has relatively few accounts receivable, and assessments are made individually for each account receivable. The credit risk is assessed as low.

XX Financial liabilities

Financial liabilities are classified and measured as liabilities valued at amortized cost.

Financial liabilities include the following items:

- Bank loans and other loans are initially carried at fair value less transaction costs directly attributable to the instrument's issue. These interest-bearing liabilities are then measured at amortized cost using the effective interest rate method, which ensures that interest expense is calculated based on a fixed interest rate on the carrying amount of the liability on the balance sheet. The reported annual percentage rate includes initial transaction costs and any premiums payable upon redemption, as well as interest or coupon paid while the debt is outstanding. Loans are classified as short-term liabilities unless the group has an unconditional right to defer payment of the debt for at least 12 months after the balance sheet date, when they are instead classified as long-term liabilities.

A financial liability is measured at zero and lifted from the accounts when its contractual obligations have been fulfilled, cancelled, or expired.

Transaction costs arising from the establishment of credit facilities are recognized to the extent that it is likely that part or all of the loan will be used. If this is the case, transaction costs are recognized when the credit is used. If it is likely that part or all of the credit will be utilized, the cost is accrued and offset against current liabilities over the contract period to which the credit relates, applying the effective interest rate method.

- Accounts payable are payment obligations for goods or services that have been acquired from suppliers in the course of the day-to-day operations. Accounts payable are classified as current liabilities if they mature within one year. If payment is expected to be made later than 12 months after the balance sheet date, the liability is recognized as a long-term liability. Accounts payable are initially recognized at fair value and then at amortized cost using the effective interest rate method.

XXI Cash and cash equivalents

Cash and cash equivalents consist of cash and immediately available balances in banks. Cash and cash equivalents are invested in banks with a high credit rating, which is why any credit losses are considered negligible.

XXII Equity

Common shares are classified as equity. The purchase price paid for or in connection with the acquisition, sale and/or issue of new shares is recognized in equity, net of tax. Trading expenses attributable to equity transactions are recognized as a deduction from equity.

XXIII Provisions

Provisions are recognized when the group has an existing legal or constructive obligation at the balance sheet date as a result of an event that has occurred, and it is likely that an outflow of financial resources will be required to settle the obligation and that a reliable estimate of the amount can be made.

If there are several similar commitments, the probability of whether an outflow of financial resources will be required is determined by treating the group of commitments as a whole. A provision is recognized even if there is little likelihood of an outflow of financial resources in respect of a particular item in this group of commitments. Initial recognition, subsequent increase and dissolution of a provision are recognized in the income statement.

Provisions are valued at the present value of the expenses deemed necessary to settle the obligation, calculated on the basis of a pre-tax interest rate that reflects current market assessments of the time value of money and the risks associated with the obligation. The increase in the provision due to the passage of time is recognized as other external financial expenses in the income statement.

If the expenses to settle an obligation are expected to be recovered from third parties and this is virtually safe, the recovery is recognized as an asset in the balance sheet.

XXIV Contingent assets

The group discloses contingent assets as a result of events that have occurred, the occurrence of which will only be confirmed by the occurrence or absence of one or more uncertain future events, which are not entirely within the company's control.

XXV Contingent liabilities

The group discloses contingent liabilities if there is a possible commitment that is confirmed only by several uncertain future events, and it is unlikely that an outflow of resources is required or that the size of the commitment cannot be calculated with sufficient certainty.

XXVI Cash flow statement

The cash flow statement is prepared according to the indirect method. This means that operating profit is adjusted for transactions that did not result in cash receipts or disbursements during the period, as well as for any income and expenses related to the cash flows of investment or financing activities.

NOTE 2 SIGNIFICANT ACCOUNTING ASSESSMENTS AND ASSUMPTIONS

When preparing the financial statements, group management makes estimates and valuations that affect the reported amounts of assets and liabilities, sales and expenses, as well as disclosures of contingent liabilities at the time of the financial statements. The estimates and assumptions that entail a significant risk of significant adjustments to the carrying values of assets and liabilities during the next financial year, as well as being critical for assessments in the application of the group's accounting policies, are discussed below. Reported estimates and assessments are considered reasonable under the current circumstances.

Group management and the audit committee have discussed the development, selection of, and disclosures of, the group's critical accounting principles and estimates. The estimates and assessments that have been made in the application of the group's accounting policies are described below.

Intangible assets

The group conducts development activities. An intangible asset arising from development, so-called capitalized development cost for own account, shall only be recognized as an asset on the balance sheet if all the conditions of IAS 38 are met. The principle is described in more detail in Note 1. For each development project, the group's management team continuously considers whether there are conditions for the finished product to provide economic benefits through increased revenues or lower costs, and whether there are technical expertise and financial resources to complete the asset so that it will be available for use or sale, thereby generating likely future economic benefits.

During the financial year, the company has not capitalized any development expenses. The company uses a time reporting system to ensure that only time related to the development phase is capitalized. Furthermore, a review of project plans and costs is carried out to ensure that they meet the criteria of IAS 38. Development costs are amortized over an estimated useful life of 5 years.

For intangible assets that have not yet been put into use, each reporting period is examined in accordance with the principle described in Note 1 to whether there is a need for impairment. In 2024, it was assessed that there was a need for impairment for the company's patents as the company makes the assessment that the business is no longer linked to these patents. The patents protect technologies, processes, properties and applications for the company's drug delivery platform within the former drug development business area.

The largest item in intangible assets relates to the company's expenses incurred to enable large-scale silica production. The investments relate to both external expenses, primarily for contract manufacturers, and internal expenses for own employees. Large parts of the investments relate to expenses for test production and initial efficiency improvements. When assessing the recoverable value, the company's future revenues, production capacity, and manufacturing costs have been taken into account. The company sees a high demand for its products, future sales with good profitability, and a growing manufacturing capacity. This is the basis for the recovery value exceeding the carrying amount. The company applies a straight-line depreciation over 5 years.

Leasing

The company has different types of leasing, partly operational leasing and partly acquired right-of-use assets. Operating leasing includes, for example, rent for premises and IT equipment, and right-of-use assets include the equipment that the company has with the contract manufacturer Sterling, where Nanologica has a buy-back option in the event that the collaboration is terminated prematurely. The right-of-use asset is measured at cost and recognized at an amount equal to the lease liability at which it was originally valued

after adjusting for prepaid lease payments and initial direct expenses, as well as expenses to restore the asset to the condition prescribed in the terms of the lease. Rights of use are amortized on a straight-line basis in subsequent periods over the shorter period of use and the lease period. If the group is reasonably certain to exercise a call option, the right of use is amortized over the useful life of the underlying asset.

Calculation of manufacturing costs and valuation of inventories

The company's products are largely manufactured by contract manufacturers and payments are made during the production period. Reporting of purchasing costs and inventory takes place in connection with the material being completed according to order and delivered to the company. Nanologica has invested in dedicated production equipment used in manufacturing. Depreciation for this is expensed on a straight-line basis and is also included in the calculation of the acquisition cost of manufactured goods.

Small-scale manufacturing takes place in-house. Manufacturing takes place in several stages, where the cost for each step is reported in the acquisition cost. Costs are calculated based on the use of raw materials and semi-finished products, with a surcharge for own work and use of assets in each production stage. The mark-up is made with standard values for each production step based on a normal production volume.

Inventories are valued at the lowest of the cost and net sales value. Materials that are deemed to have no demand are left without value. The same also applies to raw materials and semi-finished products that can only be finished into a not demanded product.

Calculation of write-down of onerous contract

In 2024, the company made an assessment that the company's current assets were overvalued and that there was therefore a need for impairment.

Loss carry-forwards

The group's loss carry-forward has not been valued and is not reported as a deferred tax asset. Loss carry-forwards are only valued when the group has established a level of profit that the management with certainty assesses will lead to a tax surplus.

Recognition of revenue

The group reports revenues from sales of goods, provision of services, and from distribution agreements. Revenue recognition is carried out in accordance with the five-step model set out in IFRS 15.

See also note I Accounting principles. Sales in the group have mainly consisted of sales of goods, but with components of service sales from application development. The sale of goods is reported in accordance with the applicable payment and delivery terms.

Service sales have had a component of prepayment and a component of payment when projects are met. Prepayment has been distributed evenly over the duration of the project, where applicable, and payment for the achievement of the project's objectives has been recognized when the customer has confirmed that the project has been achieved.

NOTE 3 FINANCIAL RISKS

The group's operations are exposed to various financial risks such as financial market risk (including currency risk, interest rate risk, cash flow interest rate risk and price risk), credit risk and liquidity risk. The group's

overall risk management focuses on managing uncertainty in the financial markets and strives to minimize possible adverse effects on the group's financial results. Financial risks and transactions are managed centrally by the parent company through the group's CFO and CEO in accordance with policies established by the board of directors. The main market and financial risks are described below.

Currency risk

Currency risk may affect earnings and financial position due to currency fluctuations. Nanologica has trading and production in different currencies and is therefore subject to risks related to fluctuating exchange rates. A large part of the company's costs is in British Pounds (GBP), which means that costs may increase in cases where SEK decreases in value in relation to GBP. The majority of the company's revenue is currently in USD, which means that revenues may decrease in cases where SEK decreases in value in relation to USD. If the company's projects proceed according to plan, it is likely that exposure to exchange rate fluctuations will increase in the future. In accordance with the company's financial policy, no hedging instruments are currently used, which means that fluctuating exchange rates can have a material impact on the company's earnings, cash flow and financial position. See also Note 34 for sensitivity analysis of currency risk. The group has no loans in foreign currency and is therefore not exposed to any currency risk regarding loans.

Interest rate risk

The group is exposed to interest rate risk on interest-bearing long-term and short-term liabilities. The group has had two types of loans: from banks and credit institutions, and from private investors. On the balance sheet day, the group only had loans from private investors. 100 percent of the total loans on the balance sheet day are at fixed interest rate. The interest rate risk is therefore considered to be relatively low. The interest rates and maturities of the loans are set out in note 25.

The group has assets in cash and cash equivalents in the bank that are affected as a result of changes in interest rates. The majority of the financial assets of the bank are without interest and therefore the risk is low.

Credit risk

The group has a limited credit exposure to customers, including outstanding receivables. Prior to the conclusion of an agreement, the group's customers are subject to credit checks, in which information about the customers' financial position is obtained. Other factors are also taken into account in the overall assessment. Credit terms for customers are determined individually and the customers' financial position is monitored and tested on an ongoing basis. Follow-up of accounts receivable takes place on an ongoing basis with control of overdue customer invoices. As the company has and will also have a limited number of customers, there is a concentration risk.

Bad debt losses relating to expected credit losses from accounts receivable are recognized taking into account various possible scenarios that may result in the group not being able to receive the amount due under original payment terms. Indicators that an accounts receivable can be considered uncertain are whether the client is experiencing significant financial difficulties, whether there is a likelihood that the debtor will go bankrupt or undergo financial restructuring, or that payment is a non-payment or delayed (more than 30 days). The amount of the bad debt loss is the difference between the reported amount of the asset and the present value of the estimated future cash flow, discounted by the original annual percentage rate of charge. The reported amount of the asset is reduced by the use of a bad debt account, and the loss is recorded in the income statement under other external costs.

If a loss is definitive, it is written off against the bad debts account.

Liquidity risk

Liquidity risk is the risk that exists if the company fails to meet its payments due to insufficient liquidity and/or difficulty in obtaining credit from external creditors. The group continuously monitors the sources and size of the group's cash flows and current liquidity and makes rolling forecasts to ensure that there is sufficient liquidity to meet operating activities. This follow-up is reported to the board where the outcome and forecast are compared with the budget that is produced and approved by the board each year.

Liquidity risk is estimated to be medium-low in the short term (1-1.5 years) and medium-low in the medium term (1.5-3 years). See also note 33.

Capital management

The group's goal regarding the capital structure is to ensure financing of the company's development and business plan so that it can generate returns for shareholders and benefit for other stakeholders, as well as to maintain an optimal capital structure that minimizes capital costs. An effective risk assessment combines the group's business opportunities and results with the shareholders' and other stakeholders' demands for sustainable profitability, stable long-term value growth and control.

External risks

- Wars and geopolitical tensions continue to affect the world. During the year, this has not had any direct impact on the company. However, the high level of uncertainty surrounding the impact of the geopolitical situation on the global economy and supply chain may have an impact in the longer term.
- The ongoing trade tensions between the United States and other countries do not currently have a direct impact on the company's operations. The company's assessment is that tariffs have the same impact on all silica suppliers globally since none have production in the US.
- The company's loans run at fixed interest rates, which means that the costs for these are not affected by higher interest rates during the term of the loans. Regarding fluctuations in exchange rates, the company's production and commitments are mainly in British pounds and sales mainly in US dollars. Nanologica has not currently hedged any exchange rates.
- Climate change poses a major risk to humanity from a global perspective, with financial risks as a result. At present, however, Nanologica assesses that climate risks do not have, or will have in the near future, a significant impact on the company's financial performance

Increased financial uncertainty as a result of external factors may make it difficult to sell the company's products to new customers and also impair the availability of financing that the company may depend on to carry out development projects in accordance with the company's business plan. In the event of unfavorable market conditions, financing opportunities for the company may deteriorate, which may lead to the company being forced to limit or suspend planned marketing, development and investments until sufficient financing has been secured.

The company works continuously to identify, evaluate and manage external factors that have an impact on the operational activities.

NOTE 4 DISTRIBUTION OF INCOME

See [note 1 \(I\)](#) for accounting principles.

Nanologica's distribution of revenues from the sales of goods broken down by product type, geographic market, and larger customers. Revenue from the sale of goods is recognized at the time when control of the goods is transferred to the customer. The provision of services such as application development has been recognized as revenue over time when the services have been performed.

| Composition of net sales, per product type (TSEK) | 2025 | 2024 |
|---------------------------------------------------|---------------|---------------|
| | Jan - Dec | Jan - Dec |
| Silica for preparative chromatography | 18 141 | 12 727 |

|---------------------------------------------------------------------------------------|---------------------------|-------------------|
| <i>Board of directors, CEO and other senior executives</i> | | |
| Salaries and other remunerations | 8 538 | 7 937 |
| Social security expenses | 2 890 | 2 702 |
| Pension costs | 1 166 | 1 166 |
| Total | 12 594 | 11 805 |
| <i>Other employees</i> | | |
| Salaries and other remunerations | 8 425 | 6 396 |
| Social security expenses | 2 522 | 2 102 |
| Pension costs | 674 | 548 |
| Total | 11 621 | 9 046 |

Remuneration and terms of employment of employees

In the preparation of the board of director's proposal for these remuneration guidelines, salary and terms of employment for the company's employees have been taken into account in that information about employees' total remuneration, the components of the remuneration and the remuneration's increase and rate of increase over time, formed part of the remuneration committee's and the board's basis for decision

when evaluating the reasonableness of the guidelines and the limitations resulting from them. The remuneration committee, together with the CEO, ensures that discrimination is counteracted also from a remuneration perspective and promotes equal opportunities and rights regardless of gender, ethnicity, transgender identity, religion, disability, sexual orientation or age.

Pensions

In the group there are only defined contribution pension plans.

Guidelines for remuneration to senior executives

According to the Swedish Companies Act, the Annual General Meeting shall resolve on guidelines for remuneration to senior executives in public limited liability companies admitted to trading on a regulated market. Proposals for guidelines are prepared by the remuneration committee and present the proposal for resolution at the annual general meeting, at least every four years. The board of directors' discussions of and decisions on remuneration-related matters are made without the presence of the CEO or other members of the executive management, to the extent that they are affected by the issues.

The annual general meeting 2023 has resolved to adopt guidelines for remuneration to senior executives as described below. These guidelines cover the company management of Nanologica and the company's board members to the extent that remuneration other than those resolved by the annual general meeting is paid to board members.

A successful implementation of the company's business strategy and the safeguarding of the company's long-term interests, including its sustainability, requires that the company can recruit and retain qualified employees, in several cases specialists in specific areas. This requires that the company can offer competitive total remuneration. The total remuneration shall be market-based and competitive and be in relation to responsibilities and powers.

Fixed salary and variable remuneration

The fixed salary consists of fixed cash salary and is reviewed annually. The fixed salary reflects the requirements placed on the position regarding competence, responsibility, complexity and how the position is expected to contribute to achieving the business goals. Furthermore, the fixed salary shall be individual and differentiated and reflect predetermined and achieved performance targets.

In addition to fixed salary, the CEO and other members of the executive management may, in accordance with a separate agreement, receive variable remuneration in the event of fulfilment of predetermined criteria. The variable remuneration shall be based on the result of predetermined and measurable criteria, which in turn shall be designed to contribute to an increased value for the company. Any variable remuneration consists of annual variable cash remuneration and may not exceed 50 percent of the fixed annual salary for the CEO and 30 percent for other senior executives.

Other benefits and pensions

For the CEO, pension benefits, including health insurance, are defined contribution and premiums shall not exceed 20 percent of the fixed annual salary. For other members of the company's management, pension benefits, including health insurance, are defined contribution unless the executive is covered by a defined benefit pension in accordance with mandatory collective agreement provisions.

Premiums for defined contribution pensions shall not exceed 30 income base amounts annually. Variable cash remuneration shall not be pensionable.

Other benefits, which may include car benefit, travel benefit and health insurance, are market-based and constitute a limited part of the total compensation. Premiums and other costs arising from such benefits may amount to a maximum of 10 percent of the fixed annual salary.

Remuneration to the CEO

The company's CEO has a fixed monthly salary of TSEK 159 plus payment of pension premiums of appx. TSEK 22. In addition, the CEO may receive a variable remuneration in the form of bonus. However, according to the remuneration guideline, the variable remuneration shall not exceed half (0.5) annual salary. In 2025, Nanologica's CEO received a fixed remuneration of SEK 1,919 thousand, paid pension premiums of SEK 270 thousand, and a non-pensionable variable remuneration of SEK 275. Moreover, the CEO received car benefit and health insurance amounting to a total of SEK 137 thousand during 2025.

Remuneration to senior executives

Senior executives refer to the CEO and the management team, which at the end of the year consisted of a total of four persons. Remuneration to senior executives consists of basic salary, variable remuneration, pension provisions and other benefits. For the financial year 2025, remuneration was paid to the CEO and senior executives in accordance with what is stated in the table in note 7.

Termination and severance pay

For the CEO, a notice period of 6 months applies in the event of termination by the CEO. In the event of termination by the company, a notice period of 12 months applies. In the event of termination by the company, variable remuneration is paid that has been earned, but which has not yet been received by the company at the time of termination of work. Such remuneration shall be paid to the CEO no later than at the time of termination of employment. Otherwise, normal remunerations according to the employment agreement are paid during the termination period. Notice periods for other senior executives normally amount to 3 to 6 months. In the event of termination by the company, the notice period of a maximum of 6 months applies. No severance pay is agreed with senior executives.

Consultant fees to board members

Board members are only entitled to receive such fees as have been resolved by the general meeting. Board members may in special cases be reimbursed for services in their respective area of expertise or competence provided that the service performed is outside what can be considered as a customary assignment as a board member. For these services (including services performed through a wholly owned company by a board member), a market-based fee shall be paid provided that such services contribute to the implementation of the company's business strategy and the safeguarding of the company's long-term interests, including its sustainability. Such consulting fees for each board member may not exceed the annual board fee and shall be regulated in a consulting agreement approved by the board of directors (but in accordance with the Swedish Companies Act's conflict of interest rules).

The board of directors

According to the resolution of the annual general meeting on May 22, 2025, board fees are paid for the period until the next annual general meeting has been held of SEK 325 thousand (315) to the chairman and SEK 190 thousand (185) each to other members. It was also resolved that fees of SEK 50 thousand to the chairman of the audit committee and SEK 30 thousand each to the other members of the audit committee shall be paid, and fees of SEK 25 thousand to the chairman of the remuneration committee and SEK 15 thousand to each member of the remuneration committee shall be paid.

| Remuneration and other benefits 2025 | Basic salary/ | Variable | Other | Pension | Total |
|--------------------------------------------|------------------|----------------|----------------|----------------|------------------|
| | Board fee | remuneration | remuneration | costs | |
| Chairman of the board, Gisela Sitbon | 345 000 | 0 | 0 | 0 | 345 000 |
| Board member, Lena Torlegård | 237 500 | 0 | 0 | 0 | 237 500 |
| Board member, Mattias Bengtsson | 202 500 | 0 | 0 | 0 | 202 500 |
| Board member, Anders Rabbe | 217 500 | 0 | 0 | 0 | 217 500 |
| Board member, Thomas Eldered | 217 500 | 0 | 0 | 0 | 217 500 |
| Board member Alexandra Blomberg Montgomery | 92 500 | 0 | 0 | 0 | 92 500 |
| Chief Executive Officer | 1 919 350 | 275 261 | 137 331 | 269 988 | 2 601 930 |
| Other senior executives (3 positions)* | 4 683 172 | 180 802 | 29 476 | 582 948 | 5 476 397 |
| Total | 7 915 022 | 456 063 | 166 807 | 852 936 | 9 390 828 |

*At the end of the year, "other senior executives" consisted of three persons (in addition to the CEO).

Variable remuneration for the financial year 2025 refers to an expensed bonus, which has been paid in 2026.

| Remuneration and other benefits 2024 | Basic salary/ | Variable | Other | Pension | Total |
|--------------------------------------------|------------------|----------------|----------------|------------------|------------------|
| | Board fee | remuneration | remuneration | costs | |
| Chairman of the board, Gisela Sitbon | 332 500 | 0 | 0 | 0 | 332 500 |
| Board member, Lena Torlegård | 230 000 | 0 | 0 | 0 | 230 000 |
| Board member, Mattias Bengtsson | 195 000 | 0 | 0 | 0 | 195 000 |
| Board member, Anders Rabbe | 210 000 | 0 | 0 | 0 | 210 000 |
| Board member, Thomas Eldered | 210 000 | 0 | 0 | 0 | 210 000 |
| Board member Alexandra Blomberg Montgomery | 34 688 | 0 | 0 | 0 | 34 688 |
| Chief Executive Officer | 1 948 526 | 0 | 154 384 | 270 044 | 2 372 954 |
| Other senior executives (3 positions)* | 4 415 686 | 200 232 | 6 000 | 745 421 | 5 367 339 |
| Total | 7 576 400 | 200 232 | 160 384 | 1 015 465 | 8 952 481 |

*At the end of the year, "other senior executives" consisted of three persons (in addition to the CEO).

Variable remuneration for the financial year 2024 refers to an expensed bonus, which has been paid in 2025.

Incentive programs

Share-based and share price-based incentive programs shall, if applicable, be resolved by the annual general meeting. Current incentive programs are described on page 23, and in note 23.

| Name of executive (position) | The main conditions of share option plans* | | | | | Information regarding the reported financial year | | | | |
|------------------------------|--------------------------------------------|------------|-------------------------|-------|-----------|---------------------------------------------------|-----------------------|-------------------|-----------------|-----------------------------------|
| | | | | | | Opening balance | During the year | | | Closing balance |
| | | | | | | Share options held at beginning of year | Share options awarded | Exercised options | Expired options | Share options held at end of year |
| Andreas Bhagwani (CEO) | 2023/2026 | 2023-12-05 | 2026-08-01 - 2026-11-30 | 0,558 | 30,00 SEK | 75000 | 0 | 0 | 0 | 75 000 |
| Other executives | 2023/2026 | 2023-12-05 | 2026-08-01 - 2026-11-30 | 0,558 | 30,00 SEK | 50000 | 0 | 0 | 0 | 50 000 |

NOTE 8 DEPRECIATION / AMORTIZATION OF TANGIBLE AND INTANGIBLE ASSETS AND RIGHT-OF-USE ASSETS

See [note 1 \(VIX\)](#) for accounting principles.

| Amounts in TSEK | 2025 | 2024 |
|----------------------------------------------------------------------------------|----------------|----------------|
| | Jan - Dec | Jan - Dec |
| Depreciation of capitalized expenditure for research and development and similar | -7 178 | -6 579 |
| Depreciation patents* | 0 | -384 |
| Depreciation of equipment, tools, fixtures and fittings | -836 | -727 |
| Depreciation of right-of-use assets | -4 428 | -6 428 |
| Valuation of intangible assets | 0 | -1 426 |
| Valuation of tangible assets | 0 | -3 |
| Total | -12 442 | -15 548 |

* includes reversal of depreciations after write-down of patents

During the third quarter of 2024, the value of the company's patents was written down completely, corresponding to a value of SEK 1,426 thousand, as the company makes the assessment that the operations of the business are no longer linked to these patents. The patents protect technologies, processes, properties and applications for the company's drug delivery platform within the former drug development business area.

| Amounts in TSEK | 2025 | 2024 |
|-----------------------------------|--------------|---------------|
| | Jan - Dec | Jan - Dec |
| Valuation of other current assets | 2 409 | -9 005 |
| Total | 2 409 | -9 005 |

During the third quarter of 2024, write-downs of inventories amounting to SEK 9,005 thousand were made relating to impairment of products in progress where the company assesses that the completion cost exceeds the net sales value. During the first quarter of 2025, these write-downs have been revaluated whereby parts of the written down amount have been reversed.

NOTE 9 OTHER OPERATING EXPENSES

See [note 1 \(X\)](#) for accounting principles.

| Amounts in TSEK | 2025 | 2024 |
|-----------------------------------------------------------|---------------|---------------|
| | Jan - Dec | Jan - Dec |
| Exchange rate losses on operating receivables/liabilities | -1 291 | -1 538 |
| Loss from disposal of fixed assets | -9 | 0 |
| Group adjustments regarding leasing contracts | 30 | 0 |
| Total | -1 270 | -1 538 |

NOTE 10 FINANCIAL INCOME

See [note 1 \(XI\)](#) for accounting principles.

| Amounts in TSEK | 2025 | 2024 |

NOTE 13 EARNINGS PER SHARE

See [note 1 \(XIII\)](#) for accounting principles

| | 2025 | 2024 |
|------------------------------------------------------------------------------------|--------------|--------------|
| | Jan - Dec | Jan - Dec |
| Earnings per share before and after dilution | | |
| Profit/loss for the year attributable to shareholders of the parent company (TSEK) | -51 289 | -65 629 |
| Average number of outstanding ordinary shares | 88 369 820 | 49 533 602 |
| Earnings per share before and after dilution (SEK) | -0,58 | -1,32 |

When calculating diluted earnings per share, the weighted average number of ordinary shares outstanding is adjusted for the dilution effect of all potential ordinary shares. These potential ordinary shares are attributable to outstanding options to the board of directors, management and employees, see equity disclosure for the group. As the profit for the year is negative, potential ordinary shares are not considered dilutive.

NOTE 14 CAPITALIZED EXPENSES FOR DEVELOPMENT WORK AND SIMILAR WORK

See [note 1 \(XIV\)](#) for accounting principles and note 2 for significant accounting assessments and assumptions.

| | 2025 | 2024 |
|--------------------------------------------------|----------------|----------------|
| | Dec 31 | Dec 31 |

| Closing balance | 48 516 | 48 516 |
| <i>Accumulated depreciations</i> | | |
| Opening balance | -33 283 | -26 707 |
| Depreciations for the year | -5 770 | -6 575 |
| Closing balance | -39 053 | -33 283 |
| Reported value at the end of the year | 9 464 | 15 234 |
| Specification of significant items (TSEK) | | |
| Scale up of silica production* | 9 464 | 15 234 |
| Total | 9 464 | 15 234 |

* Refers to both internal and external expenses for upscaling to large-scale production of silica. The depreciation period is 5 years and is made linearly.

NOTE 15 PATENTS

See [note 1 \(XIV\)](#) for accounting principles.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|--------------------------------------------------------|----------------|----------------|
| <i>Accumulated acquisition values</i> | | |
| Opening balance | 0 | 3 360 |
| Investments for the year | 0 | 479 |
| Divestments and disposals | 0 | -3 839 |
| Closing balance | 0 | 0 |
| <i>Accumulated amortizations</i> | | |
| Opening balance | 0 | -2 029 |
| Reversal of amortizations of divestments and disposals | 0 | 2 413 |
| Amortizations for the year | 0 | -384 |
| Closing balance | 0 | 0 |
| Reported value at the end of the year | 0 | 0 |

The company's patents protected technologies, processes, properties and applications for the company's drug delivery platform within the former drug development business area. During the third quarter of 2024, the value of the patents was written down to zero as the company makes the assessment that the business is no longer linked to these patents.

NOTE 16 EQUIPMENTS, TOOLS, FIXTURES AND FITTINGS

See [note 1 \(XV\)](#) for accounting principles.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|----------------------------------------------|----------------|----------------|
| <i>Accumulated acquisition values</i> | | |
| Opening balance | 7 607 | 7 627 |
| Acquisitions | 1 088 | 262 |
| Divestments and disposals | 0 | -282 |
| Closing balance | 8 695 | 7 607 |

| Depreciations for the year | -746 | -820 |
| Closing balance | -5 166 | -4 420 |
| Reported value at the end of the year | 3 529 | 3 187 |

NOTE 17 RIGHT-OF-USE ASSETS AND LEASING LIABILITIES

See [note 1 \(XVI\)](#) for accounting principles.

Nanologica's right-of-use assets consist partly of rental contracts for premises in Södertälje (office and production) and embedded leasing contracts for machines and technical facilities at the partner Sterling Pharma Solutions. The lessee's weighted average marginal loan interest rate applied to lease liabilities regardless of asset type is 4.0 percent. Leases accounted for according to IFRS 16 contain no extension options, early termination terms, residual value guarantees or other relevant contractual terms.

| Amounts reported in the balance sheet - right-of-use assets (TSEK) | 2025-12-31 | | |
|-----------------------------------------------------------------------|-----------------------------------------|------------------------------------------------|-------------------------------|
| | Buildings/ premises (offices etc) | Machinery and other technical facilities | Total right-of- use assets |
| Opening balance | 3 426 | 7 786 | 11 212 |

| New leases | 0 | 317 | 317 |
| Depreciation during the year | 5 314 | 0 | 5 314 |
| Depreciation during the year | -1 888 | -4 540 | -6 428 |
| Closing balance | 3 426 | 7 786 | 11 212 |

| Amounts reported in the balance sheet - leasing liabilities (TSEK) | 2025-12-31 | | |
|-----------------------------------------------------------------------|----------------|-----------------|-----------------------|
| | Long-term debt | Short-term debt | Total leasing debt |
| Opening balance | 258 | 2 896 | 3 154 |
| New leases | 1 659 | 652 | 2 310 |
| Revaluation | 0 | 0 | 0 |
| Terminated leases | 0 | -865 | -865 |
| Transfer | 702 | -702 | 0 |
| Amortization | -2 411 | -14 | -2 425 |
| Closing balance | 208 | 1 967 | 2 174 |

| Amounts reported in the balance sheet - leasing liabilities (TSEK) | 2024-12-31 | | |
|-----------------------------------------------------------------------|----------------|-----------------|-----------------------|
| | Long-term debt | Short-term debt | Total leasing debt |
| Opening balance | 136 | 530 | 666 |
| New leases | 0 | 317 | 317 |
| Revaluation | 1 591 | 2 796 | 4 387 |
| Transfer | 46 | -46 | 0 |
| Amortization | -1 514 | -702 | -2 216 |
| Closing balance | 258 | 2 896 | 3 154 |

| Amounts reported in the income statement - leasing agreements (TSEK) | 2025 Dec 31 | 2024 Dec 31 |
|-------------------------------------------------------------------------|----------------|----------------|
| <i>Depreciation of right-of-use assets</i> | | |
| Building/premises (offices etc) | 3 067 | 1 888 |
| Machinery and other technical facilities | 1 361 | 4 540 |
| Total depreciation of right-of-use assets | 4 428 | 6 428 |
| Interest expenses (included in financial expenses) | 61 | 99 |

In addition to leases under IFRS16, the company only has a few agreements for leases of software, etc. These are short-term agreements of insignificant value. The total cash flow of leases was SEK 2,216 thousand (2,873). For information on the maturity of the lease liability, see note 35 liquidity risk.

NOTE 18 FINANCIAL ASSETS AND LIABILITIES

See note 1 ([XIX](#) and [XX](#)) for accounting principles.

The fair value of financial assets and liabilities measured at amortized cost is approximately equal to its reported amount. For short-term liabilities, the maturity is so short that fair value corresponds to the reported amount. Long-term liabilities refer to fixed-rate liabilities that are deemed to be consistent with/close to the current market interest rate.

Other financial assets and liabilities

Other financial assets and liabilities included in the group's balance sheet are valued at amortized cost, where applicable using the effective interest method.

| Financial assets and liabilities in the balance sheet December 31, 2025 (TSEK) | Financial assets/ liabilities valued at accrued acquisition value | Total reported value |
|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------|-------------------------|
| Assets | | |
| Accounts receivable | 3 814 | 3 814 |
| Other current receivables | 875 | 875 |
| Cash and cash equivalents | 3 549 | 3 549 |
| Total financial assets | 8 238 | 8 238 |
| Liabilities | | |
| Long- and short-term liabilities | 47 875 | 47 875 |
| Long- and short-term leasing liabilities | 2 174 | 2 174 |
| Accounts payable | 6 883 | 6 883 |
| Accrued expenses | 7 842 | 7 842 |
| Total financial liabilities | 64 774 | 64 774 |

| Financial assets and liabilities in the balance sheet December 31, 2024 (TSEK) | Financial assets/ liabilities valued at accrued acquisition value | Total reported value |
|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------|-------------------------|
| Assets | | |
| Accounts receivable | 896 | 896 |
| Other current receivables | 500 | 500 |
| Cash and cash equivalents | 48 430 | 48 430 |
| Total financial assets | 49 827 | 49 827 |
| Liabilities | | |
| Long- and short-term liabilities | 47 812 | 47 812 |
| Long- and short-term leasing liabilities | 3 154 | 3 154 |
| Accounts payable | 13 103 | 13 103 |
| Accrued expenses | 3 963 | 3 963 |
| Total financial liabilities | 68 032 | 68 032 |

NOTE 19 INVENTORIES

See [note 1 \(XVII\)](#) for accounting principles and note 2 for significant accounting assessments and assumptions.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|-------------------------------------------------|----------------|----------------|
| Raw materials and consumables | 0 | 131 |
| Semi-finished products and products in progress | 1 380 | 3 807 |
| Finished products and goods for resale | 26 344 | 28 807 |
| Total | 27 724 | 32 745 |
| Valued at acquisition cost | 27 724 | 32 745 |
| Total | 27 724 | 32 745 |

NOTE 20 ACCOUNTS RECEIVABLE

See [note 1 \(XIX\)](#) for accounting principles.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|-----------------------------------------|----------------|----------------|
| Accounts receivable, not overdue | 1 135 | 508 |
| Accounts receivable, 0-180 days | 2 422 | 0 |
| Accounts receivable, > 365 days | 418 | 536 |
| Total (gross) | 3 975 | 1 044 |
| Write-down | -160 | -148 |
| Total accounts receivables (net) | 3 814 | 896 |
| <i>Reported amounts, per currency</i> | | |
| SEK | 0 | 12 |
| USD | 3 761 | 885 |
| Total | 3 814 | 896 |

The maximum exposure to credit risk at the balance sheet date for accounts receivables is the reported amount as described above. Impairment testing is carried out in accordance with stated accounting principles. The fair value of accounts receivables corresponds to its reported amount, as the discount effect is not material. No accounts receivables have been provided as collateral for any liability.

NOTE 21 PREPAID EXPENSES AND ACCRUED INCOME

See [note 1 \(XIX\)](#) for accounting principles.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|--------------------------|----------------|----------------|
| Prepaid production costs | 30 862 | 30 505 |
| Other items | 845 | 389 |
| Total | 31 707 | 30 894 |

Prepaid production costs refer to advances paid to the contract manufacturer Sterling Pharma Solutions, with a deduction for goods and services delivered.

According to the terms of the contract for the first campaigns, Nanologica pays ongoing costs during production, which are then deducted when the products are finalized. A first payment for the start of production was made in June 2020, after which payments have been made on an ongoing basis, generating a prepaid cost. When selling products from these campaigns, the costs of production are partly already taken and will not have a negative impact on cash flow. The agreement is an order and a refund can only be made if the supplier severely abuses their commitment, deficiencies in quality, in production or if they are unable to fulfill their commitment. The company has no right to a refund in cases where demand decreases, or a lesser need arises for other reasons. In future campaigns, the company will pay for raw materials in advance and then pay for the product itself when it is finished

NOTE 22 CASH AND CASH EQUIVALENTS

See [note 1 \(XXI\)](#) for accounting principles.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|-------------------------------|----------------|----------------|
| Swedish crowns (SEK) | 1 447 | 40 436 |
| Euro (EUR) | 5 | 29 |
| US dollar (USD) | 2 091 | 6 777 |
| Australian dollar (AUD) | 0 | 83 |
| British pounds sterling (GBP) | 7 | 1 106 |
| Total | 3 549 | 48 430 |

The full amount, excluding a deposit of TSEK 50 (50), relates to bank balances available on request.

NOTE 23 EQUITY

See [note 1 \(XXII\)](#) for accounting principles.

As of December 31, 2025, **the share capital** amounted to SEK 8,835,723.4 divided into 88,357,234 shares, each with a quota value of SEK 0.051. All shares issued are fully paid for and no shares are reserved for transfer.

In January 2025, the Swedish Companies Registration Office granted permission for a reduction of the share capital in accordance with the resolution of the Extraordinary General Meeting on 23 September 2024, whereby the share capital was decreased from SEK 8,835,723.4 to SEK 4,506,218.934.

Other capital contributed consists of capital contributed by the company's owners that exceeds the quota value and less transaction costs. The amount also includes compensation for issued warrants

| Amounts in TSEK | Number of shares # | Share capital | Ongoing rights issue | Other contributed capital |
|--------------------------------------------------------------------|--------------------|---------------|----------------------|---------------------------|
| Opening balance January 1, 2024 | | | | |
| Rights issue 2024-04-03 | 8 032 476 | 3 294 | 0 | 54 219 |
| Premiums for repurchased warrants | 0 | 0 | 0 | -6 |
| Reduction of share capital for allocation to non-restricted equity | 0 | -3 294 | 0 | -3 294 |
| Reduction of share capital to cover loss | 0 | -10 403 | 0 | 0 |
| Rights issue 2024-11-15 | 44 178 616 | 4 418 | 0 | 94 984 |
| Transaction costs | 0 | 0 | 0 | -12 027 |
| Closing balance December 31, 2024 | 88 357 234 | 8 836 | 0 | 442 173 |
| Opening balance January 1, 2025 | 88 357 234 | 8 836 | 0 | 442 173 |
| Rights issue 2025-06-04 | 12 586 | 1 | 0 | 38 |
| Reduction of share capital to cover loss | 0 | -4 330 | 0 | 0 |
| Transaction costs | 0 | 0 | 0 | -157 |
| Closing balance December 31, 2025 | 88 369 820 | 4 507 | 0 | 442 053 |

Issued warrants

The company has ongoing incentive programs that include warrants. The purpose of the incentive programs is to encourage broad shareholding among Nanologica's employees and board members, to attract and retain competent employees, and to increase employee motivation and achievement of goals. In all incentive programs with warrants, market premiums have been paid for the warrants, and the programs have not been charged to the company's costs.

The company also has warrants that were issued in the rights issue of units that was resolved in August 2024.

Incentive program 2023/2026 for management team and employees

Incentive program 2023/2026 for the management team and employees was resolved by the Annual General Meeting on May 4, 2023. In the program, 180,000 of the total 245,000 warrants have been subscribed for. Each warrant entitles the holder to subscribe for one share in the company at a subscription price corresponding to SEK 30 during the period August 1, 2026 to November 30, 2026. Based on the existing number of shares, the dilution effect will be negligible if all warrants under the program are exercised.

A market premium, calculated using the Black-Scholes pricing model, was paid for the warrants to Nanghavi AB. The premium of a total of SEK 100,440 was transferred to Nanologica in December 2023 and added to the company's share premium reserve. For the calculation of premiums, exercise price, etc., the so-called Black-Scholes model has been used. The volatility used to calculate the value of the option is 43 percent. During the period, a risk-free interest rate of 5 per cent has been used and no dividend has been adopted. In addition to the above, no other assumptions have been taken into account in the calculation of fair value.

The incentive program was resolved by the 2023 Annual General Meeting and does not entail any cost for the company.

Warrants of series TO 5

TO5 were issued as part of each unit in the unit issue that was resolved in August, 2024. Each warrant of series TO5 entitled the holder to subscribe for one new share in the company during the period May 7, 2025 up to and including May 21, 2025 at a subscription price of SEK 3 per share. The warrants of series TO 5 were admitted to trading on Nasdaq Stockholm under the ticker NICA TO5. In total, 12,568 warrants were exercised whereby the company received SEK 37,704 in cash. The share capital increased by SEK 641,866. The dilution effect was neglectable.

| Outstanding warrants | Average price, SEK | 2025 | 2024 |
|---------------------------|-----------------------|----------------|----------------|
| Program 2021/2024* | | | |
| Opening balance | 45,00 | 0 | 800 000 |
| - Expired | | 0 | -800 000 |
| Closing balance | | 0 | 0 |
| Program 2021/2024* | | | |
| Opening balance | 0,00 | 180 000 | 180 000 |
| Closing balance | | 180 000 | 180 000 |
| All programs | | | |
| Opening balance | 42,24 | 180 000 | 980 000 |
| - Expired | 45,00 | 0 | -800 000 |
| Closing balance | | 180 000 | 180 000 |

*** Program 2021/2024 for management team and employees: a warrant entitles the holder to subscribe for one share at a subscription price corresponding to SEK 45 during the period April 1, 2024 to July 1, 2024. The program expired on July 1, 2024. No warrants were exercised.*

*** Program 2023/2026 for management team and employees: a warrant entitles the holder to subscribe for one share at a subscription price corresponding to SEK 30 during the period August 1, 2026 to November 30, 2026.*

NOTE 24 DEVELOPMENT OF THE SHARE CAPITAL

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|---------------------------------------------------------------------------------------|----------------|----------------|
| <i>Liabilities due within one year from the balance sheet date</i> | 19 292 | 47 875 |
| Other liabilities | 19 292 | 47 875 |
| <i>Liabilities due later than one year from the balance sheet date</i> | 28 583 | 0 |
| Other liabilities | 28 583 | 0 |
| Summa | 47 875 | 47 875 |
| Arrangement fees (one-time payments distributed over the duration of the loan period) | -87 | -87 |
| Total | 47 788 | 47 788 |

Det finns inga kovenanter i ovanstående lån.

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|-------------------------------------------------------------------------------------------------|----------------|----------------|
| <i>Lenders and terms</i> | Debt | Debt |
| Flerie Invest AB, yearly interest rate 8%, due for payment July 5, 2025 according to agreement* | 47 875 | 47 875 |
| | 47 875 | 47 875 |

* Flerie Invest AB is Nanologica's largest shareholder (42.5 percent) and is owned by Thomas Eldered, who has been a member of the company's board of directors since the Annual General Meeting in May 2021.

There are no covenants in the above loans.

NOTE 26 ACCRUED EXPENSES AND DEFERRED INCOME

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |
|---------------------------------------------------|----------------|----------------|
| Accrued salary costs | 3 687 | 2 110 |
| Accrued social security expenses | 737 | 643 |
| Other items | 3 418 | 1 210 |
| Total accrued expenses and deferred income | 7 842 | 3 963 |

NOTE 27 ITEMS NOT AFFECTING CASH FLOW

| Amounts in TSEK | 2025 Jan - Dec | 2024 Jan - Dec |
|--------------------------------------------|-------------------|-------------------|
| Depreciations | 12 354 | 14 119 |
| Write-downs/disposals of intangible assets | 0 | 1 426 |
| Write-downs/disposals of tangible assets | -90 | 3 |
| Other items | 0 | -189 |
| Total | 12 264 | 15 359 |

NOTE 28 CHANGES IN FINANCIAL LIABILITIES WHOSE CASH FLOW IS REPORTED IN FINANCING ACTIVITIES

| | Other financial loan liabilities | Leasing liabilities | Total group |
|------------------------------------------|-------------------------------------|---------------------|---------------|
| Opening balance January 1, 2025 | 47 788 | 3 154 | 50 943 |
| Loans | 0 | 515 | 515 |
| Amortizations | 0 | -3 143 | -3 143 |
| Disposals | 0 | -834 | -834 |
| Revaluation | 0 | 2 482 | 2 482 |
| Closing balance December 31, 2025 | 47 788 | 2 174 | 49 962 |

| | Other financial loan liabilities | Leasing liabilities | Total group |
|------------------------------------------|-------------------------------------|---------------------|---------------|
| Opening balance January 1, 2024 | 66 757 | 666 | 67 423 |
| Loans | 15 000 | 317 | 15 317 |
| Amortizations | -18 020 | -2 216 | -20 236 |
| Set-off of loans | -15 949 | 0 | -15 949 |
| Revaluation | 0 | 4 387 | 4 387 |
| Closing balance December 31, 2024 | 47 788 | 3 154 | 46 556 |

New financial loans, amortization of financial loan liabilities (but not through set-off), and amortization of leasing liabilities impacts cash flow. Other items do not affect cash flow.

NOTE 29 PLEDGED ASSETS AND CONTINGENT LIABILITIES

| Amounts in TSEK | 2025 Dec 31 | 2024 Dec 31 |

NOTE 34 DEFINITIONS OF KEY FIGURES

The company presents certain financial measures that are not defined under IFRS. These alternative performance measures are used in internal reporting and as part of management's follow-up of the group's results and financial position. The company believes that these measures provide valuable supplementary information to investors and the company's management, as they enable evaluation and benchmarking of the company's performance. Since not all companies calculate financial measures in the same way, these are not always comparable to measures used by other companies. These financial measures should therefore not be seen as a substitute for measures defined under IFRS. Reported key figures are defined according to IFRS unless otherwise stated. ESMA's guidelines on alternative performance measures are applied, which means disclosure requirements for financial measures that are not defined according to IFRS.

Alternative performance measure definitions

Operating profit/loss (EBIT)

Profit/loss before net financial items and taxes. (Earnings Before Interest and Taxes).

*Operating margin, %**

Operating profit/loss in relation to net sales. In cases where the margin is negative, the margin is only reported as "neg".

*Earnings before depreciation and amortization (EBITDA)**

In the quarterly data, the performance measure EBITDA (Earnings Before Interest, Taxes, Depreciation and Amortization). EBITDA is calculated as operating profit/loss with the re-arrangement of depreciation and amortization of intangible and tangible assets and right-of-use assets.

*Equity/assets ratio**

Equity in relation to the balance sheet total.

*Equity per share**

Equity divided by the number of shares outstanding at the end of the period.

Cash flow from operating activities per share

Cash flow from operating activities in relation to the average number of shares before dilution.

Average number of shares during the period

Calculated as an average of the number of ordinary shares outstanding during the reporting period on a daily basis.

* In the event of a negative result, no recalculation is made for dilution.

NOTE 35 SIGNIFICANT EVENTS AFTER THE END OF THE YEAR

- Nanologica acquired the Södertälje-based contract manufacturer Ardena Södertälje AB. The purchase price amounted to appx. SEK 8.6 million and was paid in the form of newly issued shares in Nanologica. The acquired company will be operated as an independent wholly-owned subsidiary within the Nanologica Group under the name Syntagon AB. The purpose of the acquisition is to strengthen Nanologica's capacity and expertise in production and to accelerate the company's growth. The acquisition is expected to contribute positively to the Group's earnings and cash flow from 2026, and create meaningful operational and commercial synergies.
- On January 30, the board of directors resolved to carry out directed share issues totaling appx. SEK 13.7 million and a rights issue of appx. SEK 82.5 million, subject to approval by an Extraordinary General Meeting on March 4. The Rights Issue is secured to 100 percent by subscription commitments and underwriting commitments and will provide the company with cash and cash equivalents of at least SEK 37.6 million in addition to the entire outstanding loan from Flerie Invest being offset against shares. The

main purpose of the issues is to strengthen the company's financial position and meet the need for working capital for the production and sale of the company's silica media NLAB Saga®, set-off of loans, and payment of the purchase price for the acquisition of Syntagon.

- In April, Nanologica received an order of appx. SEK 2 million for the company's silica-based purification media NLAB Saga® for evaluation on a production scale from a customer in India.

NOTES TO THE PARENT COMPANY'S FINANCIAL STATEMENTS

General information

The operations of the parent company are consistent with the group's operations. Most references to notes are linked to the group's notes. In cases where the parent company has its own notes, these notes are marked with M followed by the number of the note.

NOTE M1 ACCOUNTING AND VALUATION PRINCIPLES

The parent company has prepared its annual report in accordance with the Annual Accounts Act (1995:1554) and the recommendation of the Swedish Financial Reporting Council RFR 2, Reporting for Legal Entities. The Council's rules on listed companies are also applied. According to RFR 2, the parent company must apply in the annual accounts of the legal entity all IFRS approved by the EU and statements as far as possible within the framework of the Annual Accounts Act and taking into account the connection between accounting and taxation. This recommendation defines exemptions and additional disclosure requirements compared to IFRS. The financial statements include financial information for the parent company for the period from January 1 to December 31, 2025. Unless otherwise stated below, the stated accounting principles of the parent company have been applied consistently during the period.

Changes in accounting standards

Neither revised IFRS nor revised RFR 2 that entered into force on January 1, 2025 has brought about any practical change in the parent company's accounting principles.

Differences between the group's and the parent company's accounting principles

Differences between the group's and the parent company's accounting principles are set out below.

Classification and presentation

The parent company's income statement and balance sheet have been prepared in accordance with the Annual Accounts Act. The deviations from IAS 1, Presentation of financial statements, relate primarily to financial income and expenses, equity, and the existence of a separate provision item in the balance sheet.

Shares and units in subsidiaries

Holdings in subsidiaries are valued on the basis of cost, which includes acquisition-related expenses. In cases where the reported amount of the investment exceeds the recoverable amount, an impairment loss is made. Dividends from subsidiaries are recognized as income when the right to receive dividends is deemed safe and can be calculated reliably.

Group contributions and shareholder contributions

Shareholder contributions are reported directly against the equity of the recipient and are activated as shares in subsidiaries of the donor, to the extent that impairment is not required.

Financial instruments

The parent company has chosen to apply IFRS 9 in legal entity. Impairment testing of accounts receivable and group receivables is done according to the simplified method in IFRS 9.

Lease agreements

The parent company applies the exemption in RFR 2 and thus does not apply IFRS 16 in legal entity. In the parent company, lease payments are recognized as costs on a straight-line basis over the lease term.

NOTE M2 OPERATIONAL LEASING – LESSEE

| Amounts in TSEK | 2025 Jan - Dec | 2024 Jan - Dec |
|-------------------------------------------------------------------------------------------------------|-------------------|-------------------|
| <i>Future minimum leasing fees regarding operational leasing agreements that cannot be cancelled:</i> | | |
| Within one year | 1 967 | 2 873 |
| Between one and five years | 222 | 356 |
| Total | 2 189 | 3 229 |
| Expensed leasing fees for the fiscal year | 3 174 | 3 546 |

In accounting, the operational lease consists essentially of rented premises and leasing/rental of IT equipment and software including so-called cloud service for storage and documentation. The lease with Södertälje P19 AB extends until 2026-12-31 (with annual extension). In addition, the company leases a car where any early termination can generate interest costs that are offset against the residual value of the car

NOTE M3 DEPRECIATION/AMORTIZATION AND WRITE-DOWNS OF TANGIBLE AND INTANGIBLE ASSETS

| Amounts in TSEK | 2025 Jan - Dec | 2024 Jan - Dec |

| Carried forward | -50 181 | -66 008 |
| Total | -50 181 | -66 008 |

ASSURANCE

The board of directors and the CEO hereby assure that the consolidated financial statements and the annual accounts have been prepared in accordance with generally accepted accounting principles in Sweden and that the consolidated financial statements have been prepared in accordance with with the international accounting standards referred to in Regulation (EC) No 1606/2002 of the European Parliament and of the Council of 19 July 2002 on the application of international accounting standards and generally accepted accounting principles, respectively, and give a true and fair view of the position and results of the Group and the Parent Company. The annual report for the parent company and the group gives a fair overview of the development of the parent company's and the group's operations, position and results, and describes significant risks and uncertainties that the parent company and the companies that are part of the group face. The group's income statement and balance sheet and the parent company's income statement and balance sheet will be subject to adoption at the annual general meeting on May 21, 2026.

The Annual Report was decided and signed on 23 April 2026.

AUDITORS REPORT

To the annual general meeting of the shareholders of Nanologica AB (publ),
org.nr 556664–5023

REPORT ON THE ANNUAL ACCOUNTS AND CONSOLIDATED ACCOUNTS

Statement

We have performed an audit of the annual report and consolidated financial statements for Nanologica AB (publ) for the year 2025. The company's annual report and consolidated financial statements are included on pages 46–112 of this document.

In our opinion, the annual report has been prepared in accordance with the Annual Accounts Act and provides a fair view in all material respects of the parent company's financial position as of 31 December 2025 and of its financial results and cash flow for the year in accordance with the Annual Accounts Act. The consolidated financial statements have been prepared in accordance with the Annual Accounts Act and present fairly, in all material respects, the group's financial position as of 31 December 2025 and of its financial results and cash flow for the year in accordance with IFRS Accounting Standards, as adopted by the EU, and the Annual Accounts Act. The board of directors' report is consistent with the other parts of the annual report and the consolidated financial statements.

We therefore recommend that the Annual General Meeting adopt the income statement and balance sheet for the parent company and the group.

Our statements in this report on the annual report and the consolidated financial statements are consistent with the content of the supplementary report submitted to the parent company's audit committee in accordance with Article 11 of the Auditors' Regulation (537/2014/EU).

Basis for statements

We have carried out the audit in accordance with International Standards on Auditing (ISA) and generally accepted auditing practice in Sweden. Our responsibilities under these standards are described in more detail in the Auditor's Responsibilities section. We are independent in relation to the parent company and the group in accordance with generally accepted auditing practice in Sweden and have otherwise fulfilled our professional ethical responsibilities in accordance with these requirements. This includes that, based on our best knowledge and belief, no prohibited services referred to in Article 5(1) of the Auditors' Regulation (537/2014/EU) have been provided to the audited company or, where applicable, its parent company or its controlled companies within the EU.

We believe that the audit evidence we have obtained is sufficient and appropriate as a basis for our opinions.

Areas of particular significance

Particularly significant areas for the audit are those areas that, in our professional judgment, were the most significant for the audit of the annual accounts and consolidated accounts for the period in question. These areas were addressed in the context of the audit of, and in our position statement on, the annual accounts and the consolidated accounts as a whole, but we do not make separate statements on these areas.

Accounting and valuation of prepaid production costs

In the group's balance sheet, "Prepaid production costs" are reported in an amount of SEK 30,862

thousand. These relate to advances paid to the contract manufacturer Sterling Pharma Solutions, with a deduction for goods and services delivered. See Note 21 and accounting principles on page 72 of the annual report and the consolidated financial statements for detailed information and a description of the area.

The valuation of the item is subject to the contract manufacturer being able to deliver the finished product whose net sales value is not less than the value of the payments made and any remaining agreed payments to the contract manufacturer.

How our audit has taken the area of particular significance into account

We have evaluated the processes relating to the group's assessments and positions for the valuation of prepaid production costs, including their identification and recognition of loss contracts.

As part of our review, we have also:

- Taken note of agreement with the contract manufacturer
- Reviewed management's documented assessment of the expected net sales value of the end product and verified estimated sales prices against entered customer agreements.
- Obtained confirmation from the contract manufacturer of the remaining quantities to be delivered and the remaining agreed payments.

In addition, we have reviewed a selection of the transactions that have been reported within the balance sheet item and examined whether appropriate accounting principles have been applied and that the required information has been provided.

Information other than the annual report and consolidated financial statements

This document also contains information other than the annual report and the consolidated financial statements and can be found on pages 3-45. The board of directors and the CEO are responsible for this other information.

Our opinion regarding the annual report and the consolidated financial statements does not include this information and we do not make any statement with assurance with respect to this other information.

In connection with our audit of the annual report and the consolidated financial statements, it is our responsibility to read the information identified above and consider whether the information is materially inconsistent with the annual report and the consolidated financial statements. In this review, we also take into account the knowledge we have otherwise acquired during the audit and assess whether the information otherwise appears to contain material inaccuracies.

If, based on the work that has been done on this information, we conclude that the other information contains a material misstatement, we are obliged to report this. We have nothing to report in this regard.

Responsibilities of the board of directors and the CEO

The board of directors and the CEO are responsible for ensuring that the annual accounts and consolidated financial statements are prepared and that they present a true and fair view in accordance with the Annual Accounts Act and, with regard to the consolidated financial statements, in accordance with IFRS Accounting Standards as adopted by the EU. The board of directors and the CEO are also responsible for the internal control that they deem necessary to prepare the annual and consolidated financial statements that do not contain any material misstatements, whether due to irregularities or mistakes.

In preparing the annual report and the consolidated financial statements, the board of directors and the CEO are responsible for assessing the company's and the group's ability to continue operations. They disclose, where applicable, conditions that may affect the ability to continue operations and to use the going concern assumption. However, the going concern assumption does not apply if the board of

directors and the CEO intend to liquidate the company, cease operations or have no realistic alternative to doing any of the same.

The board's audit committee shall, without prejudice to the board's responsibilities and duties in general, monitor the company's financial reporting.

Responsibility of the auditor

Our objectives are to obtain a reasonable degree of assurance as to whether the annual accounts and consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to provide an auditor's report that incorporates our opinions. Reasonable assurance is a high degree of assurance, but is no guarantee that an audit carried out in accordance with ISA and generally accepted auditing practice in Sweden will always detect a material misstatement, if any. Misstatements may arise due to irregularities or mistakes and are considered material if they individually or collectively can reasonably be expected to influence the financial decisions made by users on the basis of the annual and consolidated financial statements.

As part of an ISA audit, we use professional judgment and maintain a professional skeptical attitude throughout the audit.

Furthermore:

- we identify and assess the risks of material misstatement in the annual and consolidated financial statements, whether due to fraud or error, design and perform audit procedures based on those risks, among other things, and obtain audit evidence that is sufficient and appropriate to form the basis of our opinions. The risk of not detecting a material misstatement as a result of irregularities is higher than that of a material misstatement resulting from mistakes, as irregularities may include collusion, falsification, deliberate omissions, misinformation or disregard for internal control.
- we gain an understanding of the part of the company's internal control that is relevant to our audit in order to design audit procedures that are appropriate to the circumstances, but not to comment on the effectiveness of internal control.
- we evaluate the appropriateness of the accounting principles used and the reasonableness of the estimates of the board of directors and the CEO in the financial statements and related disclosures.
- we draw a conclusion on the appropriateness of the board of directors and the CEO using the going concern assumption in the preparation of the annual report and the consolidated financial statements. We also draw a conclusion, based on the audit evidence obtained, as to whether there is any material uncertainty relating to events or circumstances that could give rise to significant doubts about the company's and the group's ability to continue operations. If we conclude that there is a material uncertainty factor, we must draw attention in the auditor's report to the information in the annual report and consolidated financial statements about the material uncertainty factor or, if such information is insufficient, modify the opinion on the annual accounts and consolidated financial statements. Our conclusions are based on the audit evidence obtained up to the date of the audit report. However, future events or circumstances may mean that a company and a group can no longer continue operations.
- we evaluate the overall presentation, structure and content of the annual and consolidated financial statements, including the disclosures, and whether the annual accounts and consolidated financial statements present the underlying transactions and events in a fair manner.
- We plan and conduct the group audit to obtain sufficient and appropriate audit evidence regarding the financial information of companies or business units within the group as a basis for making an opinion regarding the consolidated financial statements. We are responsible for the management, monitoring and review of the audit work carried out for the purpose of the group audit. We are solely responsible for our statements.

We must inform the board of directors of, among other things, the planned scope and focus of the audit and the timing of it. We also need to disclose any significant findings during the audit, including any significant deficiencies in internal control that we identified.

We must also provide the board with a statement that We have complied with relevant ethical requirements regarding independence, and address all relationships and other circumstances that could reasonably affect our independence, as well as, where applicable, measures that have been taken to eliminate the threats or countermeasures that have been taken.

Of the areas communicated to the board of directors, we determine which of these areas have been the most significant for the audit of the annual report and the consolidated financial statements, including the most important assessed risks of material misstatement, and which are therefore the areas of particular importance for the audit. We describe these areas in the auditor's report unless laws or regulations prevent disclosure of the matter.

REPORT ON OTHER REQUIREMENTS UNDER LAWS AND REGULATIONS

The auditor's review of management and proposals for the appropriation of the company's profit or loss

Statement

In addition to our audit of the annual report and the consolidated financial statements, we have also performed an audit of the administration of the board of directors and the CEO of Nanologica AB (publ) for the year 2025 and of the proposed appropriation of the company's profit or loss.

We recommend that the Annual General Meeting dispose of the profit in accordance with the proposal in the board of directors' report and discharge the members of the board of directors and the CEO from liability for the financial year.

Basis for statement

We have carried out the audit in accordance with generally accepted auditing practice in Sweden. Our responsibilities under this section are described in more detail in the section Auditor's Responsibilities. We are independent in relation to the parent company and the group in accordance with generally accepted auditing practice in Sweden and have otherwise fulfilled our professional ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate as a basis for our opinions.

Responsibilities of the board of directors and the CEO

The board of directors is responsible for the proposed appropriation of the company's profit or loss. In the case of a dividend proposal, this includes, among other things, an assessment of whether the dividend is justifiable with regard to the requirements that the company's and the group's business nature, scope and risks place on the size of the parent company's and the group's equity, consolidation needs, liquidity and position in general.

The board of directors is responsible for the company's organization and the management of the company's affairs. This includes, among other things, continuously assessing the company's and the group's financial situation, and ensuring that the company's organization is designed so that accounting, asset management and the company's financial affairs in general are controlled in a satisfactory manner. The CEO shall manage day-to-day administration in accordance with the board's guidelines and instructions and, among other things, take the measures necessary to ensure that the company's accounting is carried out in accordance with the law and that the management of funds is carried out in a satisfactory manner.

Responsibility of the auditor

Our objective with regard to the audit of the management, and thus our discharge from liability, is to obtain audit evidence in order to be able to assess with a reasonable degree of certainty whether any member of the board of directors or the CEO in any material respect

- has taken any action or been guilty of any negligence that may give rise to liability for damages against the company, or
- in any other way acted in violation of the Swedish Companies Act, the Annual Accounts Act or the Articles of Association.

Our objective with regard to the audit of the proposed appropriation of the company's profit or loss, and thus our statement on this, is to assess with a reasonable degree of certainty whether the proposal is in accordance with the Swedish Companies Act.

Reasonable assurance is a high degree of assurance, but no guarantee that an audit carried out in accordance with generally accepted auditing practice in Sweden will always detect actions or omissions that may give rise to liability for compensation to the company, or that a proposal for the allocation of the company's profit or loss is not in accordance with the Swedish Companies Act.

As part of an audit according to generally accepted auditing practice in Sweden, we use professional judgment and have a professional skeptical attitude throughout the audit. The audit of the company's management and the proposal for the allocation of the company's profit or loss are primarily based on the audit of the accounts. The additional audit procedures that are carried out are based on our professional assessment based on risk and materiality. This means that we focus our review on such measures, areas and conditions that are essential to the business and where deviations and violations would be of particular importance to the company's situation. We review and examine decisions made, decision documentation, measures taken and other matters that are relevant to our discharge

statement. As a basis for our statement on the board's proposal for appropriation of the company's profit or loss, we have examined whether the proposal is in accordance with the Swedish Companies Act.

The auditor's review of the Esef report Statement

In addition to our audit of the annual report and the consolidated financial statements, we have also conducted an audit of the fact that the board of directors and the CEO have prepared the annual report and the consolidated financial statements in a format that enables uniform electronic reporting (the ESEF Report) in accordance with Chapter 16. Section 4a of the Securities Market Act (2007:528) for the year 2025.

Our review and statement relate only to the statutory requirement.

In our view, the ESEF report has been prepared in a format that essentially allows for uniform electronic reporting.

Basis for statement

We have conducted the audit in accordance with FAR's recommendation RevR 18 Auditor's review of the ESEF report. Our responsibilities under this recommendation are described in more detail in the section Auditor's Responsibilities. We are independent in relation to Nanologica AB (publ) in accordance with generally accepted auditing practice in Sweden and have otherwise fulfilled our professional ethical responsibilities in accordance with these requirements.

We believe that the evidence we have gathered is sufficient and appropriate as a basis for our opinion.

Responsibilities of the board of directors and the CEO

It is the board of directors and the CEO who are responsible for ensuring that the ESEF report has been prepared in accordance with Chapter 16. Section 4a of the Securities Markets Act

(2007:528), and because there is such internal control as the board of directors and the CEO deem necessary in order to prepare the ESEF report without material misstatements, whether these are due to irregularities or mistakes.

Responsibilities of the auditor

Our task is to state with reasonable certainty whether the ESEF report is essentially prepared in a format that meets the requirements of Chapter 16. Section 4a of the Securities Market Act (2007:528), on the basis of our review.

RevR 18 requires us to plan and implement our audit procedures to obtain reasonable assurance that the ESEF report is prepared in a format that meets these requirements.

Reasonable assurance is a high degree of assurance, but is no guarantee that an audit carried out in accordance with RevR 18 and generally accepted auditing practice in Sweden will always detect a material misstatement, if any. Errors may arise from irregularities or mistakes and are considered material if they can reasonably be expected to influence, individually or together, the financial decisions made by users on the basis of the ESEF report.

The audit firm applies the International Standard on Quality Management 1, which requires the firm to design, implement and manage a quality management system including guidelines or procedures regarding compliance with ethical requirements, standards for the practice of profession and applicable legal and regulatory requirements.

The audit includes obtaining evidence through various measures that the ESEF report has been prepared in a format that allows for uniform electronic reporting of the annual accounts and Consolidated financial statements. The auditor chooses which actions are to be performed, including by assessing the risks of material misstatement in reporting, whether these are due to irregularities or mistakes. In this risk

assessment, the auditor takes into account those parts of internal control that are relevant to how the board of directors and the CEO produce the documentation in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of making an opinion on the effectiveness of internal control. The review also includes an evaluation of the appropriateness and reasonableness of the assumptions of the board of directors and the CEO.

The audit procedures mainly include validating that the ESEF report has been prepared in a valid XHTML format and reconciling that the ESEF report conforms to the audited annual and consolidated financial statements.

Furthermore, the review also includes an assessment of whether the group's income statements, balance sheet and equity statements, cash flow statement and notes in the ESEF report have been marked with iXBRL in accordance with the ESEF Regulation¹.

BDO Mälardalen AB, Sveavägen 53, SE-113 59 Stockholm, Sweden, was appointed Nanologica AB's auditor by the Annual General Meeting on 22 May 2025 and has been the company's auditor since 18 June 2020.

AUDITORS STATEMENT ON THE CORPORATE GOVERNANCE REPORT

To the annual general meeting of the shareholders of Nanologica AB (publ),
org.nr 556664–5023

Assignment and division of responsibilities

The board of directors is responsible for the corporate governance report for 2025 on pages 30-45 and for ensuring that it is prepared in accordance with the Annual Accounts Act.

The scope of the audit

Our review has been conducted in accordance with FAR's recommendation RevR 16 Auditor's review of the corporate governance report. This means that our review of the corporate governance report has a different focus and a significantly smaller scope compared to the focus and scope of an audit in accordance with

International Standards on Auditing and generally accepted auditing practice in Sweden. We believe that this review provides us with sufficient basis for our statements.

Statement

A corporate governance report has been prepared. Information in accordance with Chapter 6. Section 6, second paragraph, items 2–6 of the Annual Accounts Act and Chapter 7. Section 31, second paragraph, of the same Act are in accordance with the Annual Accounts and the consolidated financial statements and are in accordance with the Annual Accounts Act.

GLOSSARY

Biosimilar

A biosimilar is a biological medicine that contains a version of the active substance contained in an already authorised biological medicine (the reference medicine). For biosimilars, shorter studies are required to get the drug approved than for an original drug.

BMI, Body Mass Index

BMI is an international measure of overweight and obesity. The measurement is based on the ratio between height and weight and is calculated by taking weight in kilograms divided by length in meters squared.

Chromatography

A method in chemistry to separate different molecules in a mixture from each other.

Analytical chromatography

Analytical chromatography is used to investigate whether a particular substance is present in a mixture, or which substances are present and in which quantity.

Preparative chromatography

Preparative chromatography is used as a purification step in pharmaceutical production to remove impurities from the final drug product.

Column

A hollow tube filled with silica used for chromatography.

GLP-1 (glucagonlike peptide 1)

GLP-1 is an incretin hormone that is released at every meal. GLP-1 stimulates the release of insulin, inhibits the secretion of glucagon, slows down gastric emptying, and provides a feeling of fullness. Overall, GLP-1 has a glucose-lowering effect.

GLP-1 analogue

Medicines that mimic the endogenous hormone GLP-1.

HPLC

HPLC stands for high-performance liquid chromatography and is a separation method for chemical compounds in solutions. In an HPLC system, there is a mobile phase (moving phase, liquid) and a stationary phase (solid phase, e.g. silica). The task of the mobile phase is to transport the sample to be analyzed or purified through the system, and the task of the stationary phase is to interact with the different substances in the sample.

In the column, the substances in the sample are separated from each other because different substances interact differently with the stationary phase. This means that they migrate through the column at different speeds and therefore come out of the column at different times.

Incretin drugs

Incretin drugs are a class of drugs with the general mechanisms of action to stimulate the release of insulin, inhibit the release of glucagon, slow down the emptying of the stomach and provide a feeling of satiety. Incretin drugs are used for weight loss and for regulating blood sugar levels.

Nanoporous

Materials where the size of the material's pores is of nanometer size, which gives the material a large surface area per gram. Mesoporous materials are a class of nanoporous materials with pore sizes between 2 and 50nm.

NASH

Non-alcoholic steatohepatitis, a form of fatty liver with liver damage that is not caused by heavy alcohol consumption.

Obesity

Abnormal or excessive accumulation of adipose tissue that poses a risk to health. BMI $\geq 30\text{kg/m}^2$ is classified as obese and BMI $\geq 25\text{kg/m}^2$ is classified as overweight.

Recombinant human insulin

Treatment of patients with insulin-requiring diabetes is currently mainly done with recombinant human insulin. Recombinant human insulin is produced from bacteria that have been given a gene (DNA) that allows the bacteria to produce insulin.

Silica

A chemical compound of silicon and oxygen (SiO_2), silicon dioxide. Crystalline silica in the form of quartz is a common mineral in the earth's crust and is a component of many rocks, as well as the largest constituent of sand. Silica also occurs in amorphous form that naturally occurs as opal and in seashells. Amorphous silica can be made synthetically and is used in various products as fillers or anti-caking agents in foods and pharmaceuticals.

Sleep apnea

Short, repeated pauses in breathing during sleep. A risk factor for high blood pressure and stroke.
