Fasadgruppen initiates environmental technology cooperation with Aprilice

Fasadgruppen has entered into a cooperation agreement with Aprilice, Sweden's largest independent solar cell company. Through the agreement, Fasadgruppen's subsidiaries will be able to offer customers to install solar cells as part of ongoing projects, primarily in connection with larger renovations.

Fasadgruppen's subsidiaries experience an increasing demand for solar cell installations in connection with renovation projects. Through the cooperation agreement, they will have the opportunity to offer solar cells as an add-on to the existing project. As part of the cooperation, electric car charging and battery storage installations can also be offered to the customer. The work will be carried out as either side or subcontracts.

Pål Warolin, CEO of Fasadgruppen, said: "In all our projects, we ensure that the properties achieve improved energy performance through sustainable façade solutions. Hence, it is a natural development that we can now easily offer solar cell installations to our customers. Already today Fasadgruppen and Aprilice are serving common customers in the form of property owners and construction companies, and together we see the opportunity to enable efficient add-on sales with a focus on environmental technology."
