Clavister Secures 450 MSEK Contract from BAE Systems for Clavister CyberArmour

Örnsköldsvik, Sweden – 27 November 2026 **– Clavister, a leader in European cybersecurity for mission-critical applications, today announces that it has been awarded a 450 MSEK contract by BAE Systems to supply Clavister CyberArmour as the secure digital backbone of CV90 vehicles in the multi-nation procurement programme commonly referred to as "Nordic Edition".**

The new agreement builds on Clavister CyberArmour's established role in the CV90's onboard communications infrastructure, bringing the solution to the Nordic Edition programme and expanding its scope within each vehicle to cover additional use cases and capabilities. Deliveries are scheduled to begin in 2028, with revenue to be recognised over several years. The Nordic Edition programme brings together procurement of CV90 vehicles for multiple nations. For Clavister, the contract represents a significant expansion of its established relationship with BAE Systems and provides long-term delivery visibility within its defence business.

The CV90 is a highly digitalised combat platform, integrating advanced vehicle systems and networked capabilities. These systems depend on a resilient digital infrastructure that connects onboard equipment, carries critical data and protects communications against cyber threats.

Clavister CyberArmour provides the vehicle's Ethernet and IP networking infrastructure, connecting onboard systems and supplying power to many of the connected devices. It combines these functions with the full security capabilities of Clavister's firewall technology, bringing networking, device power and cyber protection together in a solution designed for demanding military environments. This makes CyberArmour an integral part of how the vehicle's digital systems operate and communicate.

John Vestberg, CEO of Clavister, commented: "This contract marks a major milestone in our collaboration with BAE Systems. CyberArmour forms the secure digital backbone of the CV90, connecting its onboard systems, powering devices and protecting critical communications. Its expanded role in the Nordic Edition programme demonstrates the trust placed in our technology as an integral part of the vehicle. It also shows how our strategy of embedding our technology into established defence platforms translates into substantial business as procurement programmes expand. We look forward to supporting BAE Systems over the coming years."

The agreement reinforces Clavister's position as a European provider of secure digital infrastructure for the defence industry and highlights the growing importance of integrated networking and cybersecurity in modern combat vehicles.
