

Enersize receives public grant to commercialize patented energy efficiency technology

The Swedish Energy Agency has granted Enersize SEK 2.38 million in public funding for the research and development project “VISA – Verified Intervention for Saved Application”. The project aims to further develop and verify Enersize’s digital platform for industrial energy optimization and advance it from Technology Readiness Level (TRL) 6 to TRL 9.

The project will demonstrate how continuous online monitoring of energy consumption in industrial compressed air system, based on Enersize’s patented methods for modeling, visualization, and fair energy distribution, can be used to measure, verify, and maximize energy savings in real time.

The funding was awarded in strong competition, as the call received a very high number of applications. In its motivation, the Swedish Energy Agency states that the project aligns well with the objectives of the program and that the solution has strong potential to contribute to a sustainable energy system through the development of an advanced digital platform for industrial monitoring and optimization, specifically tailored for compressed air systems. The Agency also concludes that the customer value is clear and that the likelihood of subsequent commercialization is high.

“We are very proud to have earned the confidence of the Swedish Energy Agency. Our team swiftly recognized the potential of aligning our monitoring solution with the development goals of this call, and we worked hard throughout early summer to prepare a truly strong application,” says Fredrik Arrigucci, CEO of Enersize.

The project is funded under the Swedish Energy Agency’s program *Sustainable Business Development* and the call *Verification of innovations with customers (VER 2025:1)*. The total granted support amounts to SEK 2,378,300, of which SEK 1.88 million constitutes development funding and SEK 0.5 million is granted as de minimis aid.

About Enersize

Enersize develops and provides specialized software, tools, and services for improving energy efficiency in industrial compressed air systems – one of the most energy-intensive processes in manufacturing. The company's technology platform enables detailed monitoring, analysis, and real-time optimization of compressed air systems, with the aim of reducing energy consumption, detecting leaks, and improving operational performance.

Enersize works with a wide range of industrial companies that recognize energy efficiency as a strategic priority – both for improving financial performance and for reducing environmental impact. The solutions are scalable and designed to integrate seamlessly into both existing and new system environments.

The company is listed on Nasdaq Stockholm First North Growth Market under the ticker: ENERS.
