MilDef wins hardware contract with a European NATO country, worth approximately 553 MSEK

After MilDef 2022 signed a 20-year framework agreement with the armed forces of an unnamed NATO country, a large quantity of hardware has now been ordered. The order is for the digitization of the country's army and is the single largest hardware order MilDef has ever received. The order is valued at approximately 553 MSEK, and deliveries are expected to take place in 2027.

The delivery involves upgrading tactical IT for use in several different vehicle platforms, with MilDef providing robust hardware solutions in areas such as communications, information management, and integration support.

"The order from the government agency is an example of how MilDef is now beginning to scale up its hardware deliveries as defense organizations build capabilities," says Daniel Ljunggren, President and CEO of MilDef.

Previously, orders for hardware, services, and MilDef's OneCIS™ software have been received from the same customer.
