Enea Wins IoT Innovation Award at World Communication Awards 2021

Enea has won the IoT Innovation Award at this year's World Communication Awards for its Aptilo IoT Connectivity Control Service™ (Aptilo IoT CCS). The World Communication Awards forum has recognized innovation and excellence in the telecom industry for 23 years, and is one of the most prominent marks of achievement.

“The key in this category was to bring real innovation in the market, and this is what Enea does”, said Matt Hatton of Transforma Insights, who presented the jury's motivation. One jury member liked the fact that Aptilo IoT CCS addresses a real problem for mobile operators, enabling them to profitably launch IoT services while meeting the needs of enterprise customers, and another member said it had hyperscale potential.

Enea's Aptilo IoT CCS is a unique innovation delivered as a service on Amazon Web Services. The Aptilo Service Management Platform™ is handling the control plane, while Fortinet's next-generation firewalls are handling the data plane. The service enables mobile operators to target the mass-market of customers prepared to pay for value-added services, but not for tailor-made development.

“We are proud to win this prestigious IoT innovation award,” said Jonas Björklund, Senior Vice President of the Aptilo Business Unit at Enea. “Innovation is all about teamwork and we want to share the award with Telia, the first Aptilo IoT CCS customer, and our partners Fortinet and Amazon Web Services – it is a great joint achievement.”

With Aptilo IoT CCS in place, mobile operators can leave mobile core and IoT platforms untouched and add a flexible hyperscale layer of programmable IoT connectivity control, automating the IoT service delivery. Operator's enterprise IoT customers can manage security and policy settings through self-management portals, and VPNs can be created in a matter of minutes rather than weeks. If the operators use localization of eSIMs, customers will still get a unified IoT service across all international partner networks with the same IP-address, security, and policies.
